

Is ispot.tv legit? TrustSniffer's high-trust assessment: 90/100

ispot.tv

Verdict

90

OUT OF 100

HIGH TRUST

ispot.tv appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 75%.

What this site appears to be

Official corporate site for iSpot.tv — a TV and video ad measurement company offering SaaS products, data feeds, and enterprise services with demo/contact conversion flows.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2012.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

iSpot.tv is the corporate website of iSpot, a business-to-business TV and video advertising measurement company. It presents SaaS dashboards, audience and media measurement, attribution, data feeds, reports, research, and enterprise services for brands, agencies, networks, and streaming businesses, with demo and contact flows supporting subscription, licensing, and integration-based commercial engagement.

Scam/Impersonation Risk

No contradictions were observed. The site presents a coherent corporate product model, identifies iSpot through its product, solutions, leadership, customer, partner, careers, press, and contact sections, and shows no indicators of phishing, brand impersonation, malware delivery, or deceptive financial features. The available reputation evidence is clean, and the domain's sustained historical continuity is consistent with an established website. The operator's real-world identity remains apparently legitimate rather than independently verified. Evidence:

- The homepage presents a consistent corporate/product identity centred on TV and video ad measurement, including SAGE AI, audience measurement, attribution, reports, and enterprise solutions.
- The domain was registered in 2011 and is approximately 14.66 years old.
- Web archives contain 5,000 snapshots spanning 2012–2025, covering 14 tracked years with a maximum observed gap of 1 year.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, and no blacklist or phishing finding for the domain.

Regulatory Verification Notes

The site's business model is commercial measurement software and data services rather than an activity presented as regulated financial intermediation. No licensing claim or license number was identified in the supplied corporate content; this is a disclosure point for ordinary corporate and procurement verification, not evidence of deception. The available pages expose About, Leadership, Customers, Partners, Careers, Press, and Contact Us pathways, but the supplied evidence does not independently establish the contracting legal entity. A third-party broker-data check produced no match and should be treated only as contextual reputational information, not as a licensing determination. Evidence:

- The homepage describes SaaS dashboards, data feeds, reports, measurement products, and enterprise integrations for brands, agencies, and networks.

- The site's transport encryption uses a DV certificate issued by Amazon RSA 2048 M01, valid through 2027-02-21.
- Hosting is identified as AS16509, Amazon.com, Inc. (AMAZON-02), United States.
- The primary navigation includes About iSpot, Leadership, Customers, Partners, Careers, Press Center, and Contact Us.

What to Verify Next

Before credential or payment interactions, the prospective counterparty should confirm the legal entity named in the applicable commercial agreement, review the governing terms, privacy provisions, cancellation or renewal conditions, and payment-protection arrangements, and independently confirm official support and contact channels through a trusted corporate or offline route. For enterprise procurement, the contracting entity and any applicable data-processing or security documentation should be matched to the organization being engaged.

Evidence:

- The site provides dedicated About, Leadership, Customers, Partners, Careers, Press, and Contact Us pathways that can be used to reconcile the contracting organization.
- The captured site contains one contact/demo form and no observed untrusted submission destination.
- The site exposes a Login entry separately from its demo and contact conversion flow.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate corporate website with a high-trust, low-risk posture. No scam, impersonation, phishing, or other contradictory signal was observed, although the available evidence does not independently verify the real-world operator identity.

Infrastructure Integrity

The site is protected by a CDN/WAF architecture, with observed traffic terminating on two Amazon edge addresses—15.197.201.158 and 3.33.225.131—and no origin candidate exposed in the analysis. This reduces direct origin exposure and is a mitigating infrastructure characteristic, but it is not proof of organizational legitimacy.

Closing Assessment

Normal business evaluation is proportionate, provided that the contracting entity, commercial terms, official contact channels, and payment protections are confirmed through ordinary independent due diligence before credentials or funds are exchanged.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	80/100
Identity verification confidence	40%

- Trusted social count=5

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of ispot.tv.

- The request stayed on ispot.tv. It was not redirected to another domain. CLEAR
- Registration is published under ENOM, INC.. CLEAR
- DNS for this domain is served by awsdns-07.org, across 4 name servers. NOTED
- The registration is paid up to 2034-12-16. CLEAR
- The earliest public archive of this site is from 2012-07-10. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about ispot.tv at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
