Key findings

- Automated classification: Not Scam.
- Public web-archive history exists since 2008.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website is the official Israel Post service portal, presenting domestic and international postal delivery, courier and parcel tracking, financial and payment services, insurance-related offerings, retail functions, branch appointments, and customer support for individuals and businesses.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, malicious reputation findings, or deceptive transactional behavior were observed. The site's long-established domain history, sustained archival continuity, clean external reputation, substantial traffic footprint, and consistent Israel Post identity strongly support its legitimacy. Interactive testing also found no hidden forms, credential forwarding, cloaking, suspicious scripts, or unauthorized external network activity.

- The domain was registered in 2008 and is approximately 17.89 years old.
- The domain has 1,653 archive snapshots from 13 September 2008 to 28 July 2026, spanning 19 tracked years with no evidence of suspicious repurposing.
- The homepage identifies the service as "Israel Post" and presents a coherent official-service portal without detected brand-impersonation indicators.
- External reputation checks recorded 0 malicious and 0 suspicious detections, no malicious safe-browsing finding, no abuse reports, and a global traffic rank of 57,656.

Regulatory Verification Notes

The homepage provides legal, privacy, accessibility, customer-service, and regulatory resources alongside concrete service and pricing information. Its commercial scope includes prepaid cards, foreign-exchange services, Western Union and EuroGiro transfers, bill and government-payment facilities, student loans, and insurance comparison or intermediary services. No specific licence authority or licence number was identified in the supplied page evidence; this is a limited disclosure-verification point for regulated financial or insurance activities, not evidence of impersonation or misconduct.

- The homepage provides navigation to legal, privacy, accessibility, contact, and financial-governance materials.
- The homepage presents named financial services, including prepaid cards, money transfers, foreign exchange, bill payments, and access to customer accounts.

- The organization-validated TLS certificate identifies “ISRAEL POSTAL COMPANY LTD”; it was issued by DigiCert Global G2 TLS RSA SHA256 2020 CA1 and is valid until 1 October 2026.
- Domain registration is maintained through Domain The Net Technologies Ltd and is recorded as expiring on 25 August 2030.

What to Verify Next

For institutional onboarding involving regulated financial or insurance services, the relevant legal terms should be matched to the contracting Israel Post entity, and any applicable authorization or intermediary status should be confirmed directly with the competent registry. Transaction-specific fees, limits, exchange terms, insurance-provider roles, and external-partner handoffs should be reviewed before committing funds. Official service and escalation channels may also be recorded through an independent corporate-vendor-management process.

- The homepage distinguishes postal, courier, financial, insurance, retail, and business-facing service categories, indicating that contractual terms may vary by service.
- The homepage includes external-partner interstitial behavior, making destination and counterparty confirmation relevant when a service leaves the main portal.
- The site offers branch location, appointment, and contact functions that can support independent confirmation of service arrangements.

Summary Verdict

The website is a legitimate, established, and trustworthy Israel Post portal. Its institutional identity, historical continuity, clean threat reputation, mature service content, and benign observed behavior converge strongly, with no contradictory risk signals. Normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

The site is protected by Cloudflare CDN/WAF infrastructure, with the observed edge address served from AS48851 by Radware Ltd in the United States. The origin server was not exposed through the observed edge configuration, which reduces direct infrastructure exposure but is treated as a security-control signal rather than independent proof of legitimacy.

Closing Assessment

Prospective users may proceed with normal use, while organizations conducting material or regulated transactions should apply their standard counterparty, contractual, and transaction-control procedures.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of israelpost.co.il.

- The request stayed on israelpost.co.il. It was not redirected to another domain. CLEAR
- Registration is published under Domain The Net Technologies Ltd. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2030-08-25. CLEAR
- The earliest public archive of this site is from 2008-09-13. CLEAR
- It is hosted on radware, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about israelpost.co.il at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
