

Is it-techgroup.com legit? TrustSniffer's high-trust assessment: 90/100

it-techgroup.com

Verdict

90

OUT OF 100

HIGH TRUST

it-techgroup.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 50%.

What this site appears to be

IT Tech Group is a technology services provider offering web, mobile, data and blockchain development, plus bots/automation and QA. Contact details and payment methods (including crypto) are shown; no obvious malicious indicators in the provided content.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

At a glance

The checks that decide most of this verdict.

The page as captured

<https://www.it-techgroup.com/>

What it-techgroup.com served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2011.
- VirusTotal and Google Safe Browsing had no flags for this domain; its hosting IP carries AbuseIPDB reports below the confidence level TrustSniffer treats as a flag.

Full analysis

Overview

IT Tech Group is a corporate technology-services website presenting software development, web and e-commerce delivery, data and dashboard work, mobile applications, Web3 and blockchain projects, automation, algorithmic-trading bots, web scraping, and QA services. Its apparent business model is a client-services agency that earns revenue through project contracts and accepts payment by cryptocurrency, bank deposit, or cash.

Scam/Impersonation Risk

No contradictions were observed across the supplied site content, technical behavior, and external reputation signals. The homepage presents a coherent corporate-services identity rather than impersonating a named third party; no phishing indicators, malicious detections, blacklist hit, suspicious form behavior, or wallet-drainer activity were identified. The available evidence is therefore consistent with an established, apparently legitimate website, although the real-world operator identity has not been independently verified.

EVIDENCE

- The homepage is identified as a corporate/services site and contains no login form, sensitive form, hidden form, or untrusted form destination.
- Behavioral inspection recorded two successful runs, zero external XHR/fetch requests, zero wallet-provider or wallet-drainer runs, zero clipboard-write events, and no cloaking.
- The registration record shows creation on 2020-08-17 and an age of 6.01 years; the registrar is GoDaddy.com, LLC.
- Historical records show 42 archive snapshots spanning 2011–2025, with 15 years tracked.

Regulatory Verification Notes

The site describes ordinary software and technology services, including Web3 development and automation, rather than presenting itself as a financial institution or broker. No regulatory licence claim or licence number is presented in the supplied content; this is a transparency item for counterparty verification, not evidence of a scam. The site's payment references, particularly cryptocurrency acceptance, warrant confirmation of the contracting entity, invoice beneficiary, contractual terms, and applicable consumer or commercial protections. A contextual broker-intelligence check produced no matching result, but that signal does not establish licensing or regulatory status. The site's apparent legitimacy is supported by substantive service descriptions, clean available reputation signals, a known registrar, and valid transport encryption.

EVIDENCE

- The homepage identifies IT Tech Group as a technology-services provider and presents services across websites, data, mobile, Web3, bots, and automation.
- The site's transport encryption uses a DV certificate issued by YR2, valid through 2026-10-20.
- DNS and hosting resolve to AS16509, operated by AMAZON-02 – Amazon.com, Inc., US.
- The supplied external checks recorded no blacklist hit, malicious detection, or brand-impersonation finding; one abuse report was attributed to shared CDN infrastructure, was whitelisted, and carried zero confidence.

What to Verify Next

Before a commercial engagement, independently confirm the legal entity named in the contract, its operating jurisdiction, and any licence or registration requirement applicable to the specific service being purchased. Confirm the beneficiary of any bank or cryptocurrency payment, obtain written scope and refund or termination terms, and validate the official contact channels through an independent route. For projects involving financial automation, digital assets, or client data, require appropriate contractual safeguards, ownership terms, security responsibilities, and payment protections.

EVIDENCE

- The site navigation exposes About us and Contact us pages that can be cross-checked against the proposed contracting entity and contact details.
- The homepage contains service and portfolio descriptions but no sensitive submission form, making independent counterparty and payment checks the principal remaining diligence steps.
- The stated business model is client-contract technology work rather than an on-site account or trading interface.

Summary Verdict

The overall posture is **high trust and low risk**, and the available evidence is consistent with an established, apparently legitimate website. This conclusion supports ordinary business engagement in principle, while the absence of independent operator-identity verification means legitimacy should not be treated as conclusively proven.

Infrastructure Integrity

The website is protected by a CDN/WAF layer, with observed edge infrastructure on AS16509 operated by Amazon.com, Inc.; the origin server was not observable in this analysis. This configuration is a mitigating security and exposure-control measure, but it is not proof of the operator's identity or legitimacy.

Closing Assessment

Proceed with ordinary independent merchant-identity, contractual, return-policy, and payment-protection checks before submitting credentials or making payments.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Signals weighed against the site

- AbuseIPDB: 1 report on hosting IP 66.33.60.35 (Vercel, Inc, Content Delivery Network), 0% confidence. The reports are attributed to shared infrastructure, not specifically to this website.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of it-techgroup.com.

- The request stayed on it-techgroup.com. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by domaincontrol.com, across 2 name servers. NOTED
- The registration is paid up to 2027-08-17. NOTED
- The earliest public archive of this site is from 2011-02-02. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about it-techgroup.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
