Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2011.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is the institutional online presence of IVC Brasil, an organization that provides audited media metrics, reports, and related services for publishers, advertisers, agencies, and other media stakeholders. Its apparent business model is based on media-audit services, membership or association arrangements, and access to paid reports or dashboards.

Scam/Impersonation Risk

No phishing, impersonation, blacklist, or other contradictory signals were observed. The homepage presents a coherent institutional model involving media audits, technical standards, audience and circulation metrics, membership information, a directorate, and specialist committees; this is consistent with a corporate or business-to-business service provider rather than a deceptive transactional operation. The site also does not present a login form, wallet connection, cryptocurrency functionality, hidden sensitive forms, or suspicious external form destinations. A long-established domain and sustained historical continuity further support the conclusion that the website is apparently legitimate, although the real-world operator identity is not independently verified.

EVIDENCE

- The homepage identifies “IVC Brasil” and describes media-audit activities, audited publishers, technical standards, membership, and industry committees.
- The site’s behavioral analysis found no login form, hidden sensitive form, wallet interaction, clipboard-hijacking behavior, or cloaking.
- The domain was registered on 2011-09-09 and is approximately 14.94 years old.
- The archive contains 376 snapshots spanning 2011–2026, covering 16 years with a maximum recorded gap of 1 year.

Regulatory Verification Notes

The available content supports an established institutional and commercial service model, but it does not independently establish the legal identity of the operator or provide a verified regulatory status. The site describes audit services, reports, membership, contact information, and media-industry governance structures; no specific financial, investment, or other regulated-service license is claimed in the supplied content. This is a verification and disclosure consideration rather than evidence of scam activity. The available external reputation

checks were clean, with no malicious or suspicious detections reported, and the site's transport security and hosting arrangements are technically consistent with ordinary professional web operations.

EVIDENCE

- The homepage provides institutional explanations, service descriptions, contact information, membership material, and references to a directorate and specialist committee.
- No license authority or license number is claimed in the site's business-model content.
- The site is served from AS16509, AMAZON-02 - Amazon.com, Inc., US.
- The TLS certificate is issued by Sectigo Public Server Authentication CA DV R36, uses DV validation, and is valid through 2027-01-10.

What to Verify Next

Before credential or payment interactions, an organization should independently confirm that the contracting entity using the IVC Brasil name corresponds to the intended real-world organization, preferably through an independently obtained contact route. Contracting parties should also review the applicable service terms, report or dashboard entitlements, payment protections, cancellation provisions, and any return or dispute process. If a proposed engagement involves a regulated activity beyond media auditing, the relevant regulator's registry should be checked for the specific legal entity and service.

EVIDENCE

- The homepage provides the organization's institutional description and service scope for comparison with independently obtained corporate information.
- The site includes contact and membership material that can be reconciled against independently sourced organizational records.
- The service descriptions distinguish media auditing, reports, metrics, and membership-related activities from financial or investment services.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website with a high-trust and low-risk posture. No contradictory signals were identified, while the site's coherent institutional content, sustained domain history, clean reputation indicators, and stable technical operation support normal business consideration. The operator's real-world identity remains independently unverified, so legitimacy should be described as apparent rather than proven.

Infrastructure Integrity

The website is protected by an AWS CDN/WAF, and the observed edge address is 54.148.158.128 on AS16509; the origin server was not observable in the analysis. This mainstream protective arrangement is a mitigating infrastructure signal because it reduces direct origin exposure, but it is not, by itself, proof of organizational legitimacy.

Closing Assessment

Normal informational use is proportionate to the evidence; before submitting credentials or making payments, the prospective party should complete ordinary independent identity, contractual, and payment-protection

checks.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of ivcbrasil.org.br.

- The request stayed on ivcbrasil.org.br. It was not redirected to another domain. CLEAR
- DNS for this domain is served by awsdns-41.com, across 4 name servers. NOTED
- The registration is paid up to 2029-09-09. CLEAR
- The earliest public archive of this site is from 2011-09-24. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about ivcbrasil.org.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
