- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2021.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

IZ1 Telecom is a regional Espírito Santo telecommunications provider presenting residential and corporate fiber-optic internet plans, local coverage across seven cities, customer support, Wi-Fi services, live city cameras, and related connectivity benefits through a recurring-subscription business model.

Scam/Impersonation Risk

No contradictions, phishing indicators, impersonation signals, or confirmed malicious reputation findings were observed. The homepage presents a coherent telecom-service model with named plans, bandwidth levels, prices, customer-service channels, and subscription options; observed browsing behavior showed no hidden forms, wallet activity, suspicious scripts, cloaking, or unexplained external submissions.

- The homepage identifies IZ1 Telecom as a fiber-optic provider and presents residential and corporate plans with stated speeds, prices, Wi-Fi equipment, and service benefits.
- The site's domain was registered on 2019-02-21 and is approximately 7.45 years old.
- Historical records contain 8 archive snapshots spanning 2021–2022, covering 2 tracked years.

Regulatory Verification Notes

The site provides substantive commercial and contact information for a regional internet provider, including coverage, stores, customer support, company information, and service plans. No licensing claim or registration number is presented in the supplied evidence; this is a limited disclosure point requiring ordinary business verification rather than an indication of deception. No matching third-party broker record was identified.

- The homepage and service pages describe recurring residential and business connectivity services, regional coverage, and customer-support channels.
- The site's transport encryption uses a DV certificate issued by WE1, valid through 2026-10-26.
- The site presents a defined corporate service model without observed fraud indicators.

What to Verify Next

Before entering a commercial agreement, the prospective customer should confirm the provider's applicable business registration or telecommunications authorization through the relevant Brazilian registry and validate current pricing, coverage, installation terms, and support channels using the site's published contact and store information.

- The plan pages provide the commercial terms and service features to be checked against the proposed subscription.
- The coverage and contact pages provide the operational details for confirming availability and support.
- The site's customer and subscriber areas identify the normal account-management workflow.

Summary Verdict

The website presents as a legitimate, established, and trustworthy regional telecom provider with a coherent business model, clean observed reputation, and no contradictory identity or fraud signals. Normal interaction, including account login and standard account actions, is appropriate.

Infrastructure Integrity

Cloudflare CDN/WAF protection provides a meaningful layer of operational resilience and reduces direct exposure of the hosting origin; this is a mitigating infrastructure signal, not independent proof of legitimacy.

- Hosted on AS13335 (CLOUDFLARENET — Cloudflare, Inc., US); observed edge addresses were 104.21.2.234, 172.67.129.204, 2606:4700:3031::6815:2ea, and 2606:4700:3035::ac43:81cc.
- All observed addresses were CDN edge servers, with no likely origin address identified.

Closing Assessment

Standard use of the website, including account access and ordinary subscription-related actions, is proportionate to the evidence; routine commercial record-keeping and confirmation of service terms remain appropriate.

Written analysis generated 2026-08-02 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about iz1telecom.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
