Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2021.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

JM Parts & Solutions is a Bogotá-based technology-services website presenting advisory, software support, security, administration, web-development, and IT-project services for business and residential clients, with portfolio examples and a contact-focused pathway for initiating projects.

Scam/Impersonation Risk

No contradictions were observed: the site does not present a login flow, cryptocurrency functionality, payment interface, deceptive investment proposition, or brand-impersonation indicator. Its homepage describes ordinary technology consulting and implementation work, including software support, security, administration, captive-portal deployment, IP telephony, websites, and Windows Server projects. The displayed project counters—79 completed projects, 73 clients, 12 projects in execution, and 1,505 cups of coffee—are marketing claims rather than independently substantiated business records, but they do not by themselves indicate impersonation or fraud. The available evidence therefore supports a non-scam interpretation while leaving the real-world operator identity independently unverified.

EVIDENCE

- The homepage identifies “JM Parts & Solutions” and presents a corporate/services profile with no detected phishing, login, hidden-form, wallet, or external-password submission behavior.
- The services and portfolio sections describe advisory, software support, security, administration, captive portals, IP telephony, websites, and Windows Server work rather than high-risk financial products.
- The domain was registered on 2018-11-23 and is approximately 7.74 years old.
- Archive records show 76 snapshots, with coverage recorded from 2021-01-21 through 2025-02-27 across 5 years tracked.

Regulatory Verification Notes

The website appears to operate as a conventional technology-services business rather than a regulated financial or investment service. Its public content identifies the trading name and provides business contact details, but the supplied pages do not establish an independently verified legal entity, formal registration, or sector-specific licence; this is a transparency item for commercial due diligence, not evidence of a scam. The absence of structured business metadata and a formal legal disclosure should be considered when assessing a prospective supplier or contractor. External reputation checks supplied no malicious or suspicious detections, although coverage was partial, and no broker-dataset match was identified; neither signal constitutes legal or licensing confirmation.

EVIDENCE

- The homepage and “About,” “Services,” “Works,” “Clients,” and “Contact” sections provide business descriptions, service categories, portfolio material, address, email, and telephone details.
- The site presents one contact form, classified as non-sensitive, with no login form or untrusted submission destination detected.
- Hosting resolves through AS31898, ORACLE-BMC-31898 — Oracle Corporation, US.
- The site uses a DV TLS certificate issued by YR1, valid until 2026-09-22T12:20:35+00:00.

What to Verify Next

Before a high-value engagement, the prospective counterparty should confirm the business’s legal name, registration status, contracting entity, and authority to provide any service that may be subject to local requirements. Contact details and portfolio references should be validated through an independent channel, and a written statement of scope, deliverables, warranties, payment milestones, and dispute arrangements should be obtained before funds or privileged access are provided.

EVIDENCE

- The contact page supplies an address, email, and telephone numbers suitable for independent cross-checking.
- The portfolio section names example projects including Cumbres Bogotá, Laboratorio GyL, GoTalent, UKSA Expertos en Idiomas, and Conciencia Energy.
- The site’s public material is informational and service-oriented, with no licensing number or regulated-service claim presented in the supplied content.

Summary Verdict

The website has a **moderate-trust, apparently legitimate** posture consistent with a small established technology-services provider. Available technical, behavioral, content, and reputation signals do not indicate an active scam or impersonation pattern, but the evidence does not independently verify the real-world operator behind the site.

Infrastructure Integrity

The site is hosted on Oracle infrastructure identified as AS31898 in the United States, with no CDN or WAF detected in the supplied resolution facts. Its stable, resolved hosting and valid transport encryption provide useful technical consistency, but infrastructure protection remains a mitigating signal rather than proof of business legitimacy.

Closing Assessment

Routine informational browsing and ordinary service enquiries are proportionate; high-value contracts, payments, or privileged-access arrangements should proceed only after the counterparty and commercial terms have been independently confirmed.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

1 finding contributed to this verdict, raised by registration and ownership.

01 Governance Risk

- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of jmpartsolutions.com.co.

- The request stayed on jmpartsolutions.com.co. It was not redirected to another domain. CLEAR
- Registration is published under ENOM, INC.. CLEAR

- DNS for this domain is served by hostgator.co, across 2 name servers. NOTED
- The registration is paid up to 2026-11-23. NOTED
- The earliest public archive of this site is from 2021-01-21. CLEAR
- It is hosted on ORACLE-BMC-31898, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about jmpartsolutions.com.co at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
