- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 1998.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Job Mail is an established South African employment marketplace that presents more than 21,000 vacancies and connects job seekers with employers and recruiters through job search, candidate profiles, vacancy posting, recruitment services, and training listings.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, deceptive forms, or malicious behavior were observed. The homepage content consistently represents an employment marketplace, while the domain's long registration history, extensive archival record, established traffic footprint, and clean external reputation materially support the authenticity of the service.

- Domain-registration records show registration on 30 July 1997, making the domain approximately 29.03 years old; the registrar is DIAMATRIX C.C.
- The web archive contains 1,211 snapshots spanning 1 December 1998 to 28 June 2026, representing 29 years of tracked history, with no detected suspicious repurposing or semantic category shift.
- The homepage contained one job-search form, with no sensitive or hidden form, untrusted submission destination, or external password form detected.
- Reputation checks recorded zero malicious and zero suspicious detections, no search-browser security warning, no reported abuse, and inclusion within the top one million globally ranked domains at rank 161,507.

Regulatory Verification Notes

The site operates as a general employment marketplace rather than a regulated financial or investment service, and no financial-license claim is made or expected for the business model presented. The homepage provides access to legal and privacy policies, safety guidance, and corporate ownership information, supporting an appropriately developed disclosure framework for this type of platform. No adverse broker-intelligence match was identified.

- The homepage links to legal and privacy policies and presents separate facilities for job seekers, employers, and recruiters.
- The homepage publishes job-search safety guidance intended to help candidates recognize and avoid recruitment scams.
- The hosting infrastructure is served from AS8075, operated by Microsoft Corporation, in South Africa.

- The site uses a DV TLS certificate issued by Go Daddy Secure Certificate Authority - G2, valid until 25 November 2026.

What to Verify Next

Individual vacancy legitimacy should be assessed independently because marketplace trust does not guarantee the authenticity of every third-party employer or listing. Prospective applicants should confirm the employer through its independently sourced corporate channels, establish that the recruiter is authorized to represent it, and reject requests for advance payment or unnecessary sensitive information. Official contact channels should be confirmed independently if an interaction departs from the platform’s normal workflow.

- The homepage separates vacancies by industry and region, indicating that individual listings originate across a broad and varied employer population.
- Employer and recruiter registration is available directly through the platform, making listing-level due diligence relevant even where the platform itself is legitimate.
- The site offers dedicated companies-hiring and recruitment areas that can be used to compare a vacancy with the represented employer context.
- Training and course listings form a distinct marketplace component and should be evaluated on the merits and terms of the individual provider.

Summary Verdict

Job Mail presents as a legitimate, established, and trustworthy website with strong convergence across identity, provenance, content quality, reputation, and observed behavior. No contradictory risk signals undermine its stated purpose. Normal interaction, including account login and standard platform use, is appropriate.

Infrastructure Integrity

The site is protected through CDN/WAF infrastructure, with the observed address operating as a Microsoft-hosted edge endpoint rather than an exposed origin server. This arrangement reduces direct origin exposure and is a useful security mitigation, although infrastructure protection alone is not proof of legitimacy.

Closing Assessment

Prospective users may engage with the platform normally while applying routine marketplace due diligence to each third-party vacancy, recruiter, employer, or training provider.

Written analysis generated 2026-08-04 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of jobmail.co.za.

- The request stayed on jobmail.co.za. It was not redirected to another domain. CLEAR
- Registration is published under DIAMATRIX C.C.. CLEAR
- DNS for this domain is served by azure-dns.com, across 4 name servers. NOTED
- The registration is paid up to 2027-07-30. NOTED
- The earliest public archive of this site is from 1998-12-01. CLEAR
- It is hosted on MICROSOFT-CORP-MSN-AS-BLOCK, from a server in ZA. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about jobmail.co.za at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
