

Is jpost.com legit? TrustSniffer's high-trust assessment: 100/100

jpost.com

Verdict

100

OUT OF 100

HIGH TRUST

jpost.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 75%.

What this site appears to be

Front page of The Jerusalem Post: editorial headlines across Israel, Middle East and world news, with ads, sponsored content and subscription/login prompts.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 1996.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

jpost.com is the online publication of The Jerusalem Post, presenting Israel, Middle East, world, business, defense, opinion, lifestyle, and related news content through an advertising-supported and subscription-based digital media model.

Scam/Impersonation Risk

No contradictions were observed: the available evidence identifies no phishing, impersonation, malicious-reputation, or confirmed blacklist indicators. The homepage presents a coherent news-publisher experience with editorial sections, advertising, sponsored content, subscription prompts, and standard login functionality. Behavioral monitoring did observe two suspicious inline scripts and substantial external request activity, but no hidden forms, externally submitted password forms, wallet-provider activity, clipboard manipulation, cloaking, or wallet-drainer behavior; in context, these signals are more consistent with advertising, analytics, consent, and subscription infrastructure than with an abuse pattern. The site's long operating history, sustained archival continuity, clean external reputation checks, and top-tier global traffic footprint materially support an established-site assessment.

EVIDENCE

- Domain registration: 1996-09-30; registered 1996 (~29.88 years old).
- Web archive: 5,000 snapshots spanning 1996-12-30 to 2011-05-05 (16 years tracked), with historical material remaining within the news-publisher category.
- The homepage was evaluated as a news/media page with no content red flags, no suspected brand impersonation, and no malicious or suspicious detections in the evaluated reputation checks.
- The homepage behavior recorded 2 suspicious inline scripts, 93 external XHR requests, 33 external posts, and no hidden forms or wallet-related activity.

Regulatory Verification Notes

The site presents itself as a media publisher rather than a regulated financial service. Its visible navigation includes About Us, Terms of Use, Privacy Policy, Contact Us, Customer Service, and subscription-cancellation material, but the supplied site evidence does not independently verify the real-world operator identity and does not show a licensing claim or license number. That is a disclosure and verification consideration rather than evidence of deception. No broker match was identified in the available third-party reputational context, and the

site's established publication history and infrastructure records are consistent with an apparently legitimate operating website.

EVIDENCE

- Registration record: Network Solutions, LLC; creation date 1996-09-30; expiry date 2033-09-29.
- Hosting telemetry: AS396982, GOOGLE-CLOUD-PLATFORM - Google LLC, US.
- TLS certificate: GoDaddy TLS Intermediate CA DV - R1v1, DV validation, valid to 2027-01-09T11:14:42+00:00.
- The homepage navigation exposes About Us, Terms of Use, Privacy Policy, Contact Us, Customer Service, and Cancel Subscription pages; no license number is shown in the supplied site material.

What to Verify Next

Before credential or payment activity, an independent check should confirm the publisher or subscription merchant identity using the site's legal and customer-service materials, together with the applicable business registry or payment-provider records. Subscription users should review cancellation, renewal, refund, and payment-protection terms directly before purchasing. Account access should be initiated only through a trusted bookmark or independently confirmed official channel, and any unexpected payment or credential request should be validated through a separate contact route.

EVIDENCE

- The site exposes separate Login, Subscribe, Customer Service, and Cancel Subscription pathways.
- The homepage includes Terms of Use, Privacy Policy, About Us, and Contact Us links suitable for independent identity and transaction-term review.
- The observed forms were limited to login, newsletter signup, and cookie consent; no sensitive form was submitted to an untrusted destination.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website with a high-trust, low-risk posture and no observed scam or impersonation contradictions. The site's real-world operator identity remains independently unverified, so the trust conclusion supports ordinary use without constituting proof of the underlying legal entity.

Infrastructure Integrity

Cloudflare CDN/WAF protection provides a mitigating layer against direct exposure of the site's hosting infrastructure. The observed address was a CDN edge address, and the origin server IP was not observable in this analysis; this is a normal protective deployment pattern and is not, by itself, evidence of risk.

Closing Assessment

Normal browsing is proportionate to the assessed posture; before entering credentials or making a subscription payment, ordinary independent checks of the merchant identity, transaction terms, and payment protections should be completed.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of jpost.com.

- The request stayed on jpost.com. It was not redirected to another domain. CLEAR
- Registration is published under Network Solutions, LLC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2033-09-29. CLEAR
- The earliest public archive of this site is from 1996-12-30. CLEAR
- It is hosted on GOOGLE-CLOUD-PLATFORM, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about jpost.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
