

Is jw.org legit? TrustSniffer's high-trust assessment: 100/100

jw.org

Verdict

100

OUT OF 100

HIGH TRUST

jw.org appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-17 by automated analysis. Classification confidence 55%.

What this site appears to be

Official JW.org homepage in English providing Bible study resources, multimedia, organizational information, and links for meetings and donations.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

The page as captured

<https://www.jw.org/en/>

What jw.org served when TrustSniffer captured it on 2026-08-17. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- VirusTotal and Google Safe Browsing had no flags for this domain; its hosting IP carries AbuseIPDB reports below the confidence level TrustSniffer treats as a flag.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

JW.org is an English-language religious organization website presenting Bible study materials, publications, videos, meeting information, organizational resources, and voluntary donation facilities; its apparent purpose is to distribute free educational and faith-based content rather than sell commercial products.

Scam/Impersonation Risk

No phishing, malicious-content, impersonation, or conflicting-identity indicators were observed. The site's content and behavior are consistent with an established informational organization, and external reputation checks were clean. One low-confidence abuse report relates to shared Amazon hosting infrastructure rather than being attributed to the website itself, so it does not establish a site-specific abuse finding.

EVIDENCE

- The homepage identifies itself as the official Jehovah's Witnesses website and provides Bible teachings, publications, multimedia, meetings, organizational information, and donations; no page-level red flags were recorded.
- The domain was registered on 1999-03-06 and is approximately 27.47 years old.
- One abuse report was recorded against shared provider IP 52.85.154.98, with confidence score 2 and attribution classified as shared infrastructure.

Regulatory Verification Notes

The About Us, Contact Us, Meetings, and Donations areas present an organizational and nonprofit-oriented purpose, but the supplied content does not establish a regulator, license number, or corporate registration identifier. This is a transparency item for independent confirmation, not evidence of deception or a scam. The real-world operator identity remains unverified independently, although the available technical and content evidence is consistent with an established, apparently legitimate website. The domain is registered through Amazon Registrar, Inc., and its transport security uses a recognized Amazon-issued certificate.

EVIDENCE

- The homepage and organizational navigation identify the site as an informational religious organization and include links to About Us, Contact Us, Meetings, and Donations.
- WHOIS lists Amazon Registrar, Inc. as registrar and records the registrant organization as "c/o whoisproxy.com" on behalf of "jw.org OWNER."
- The site's TLS certificate is issued by Amazon RSA 2048 M04, uses Domain Validation (DV), and is valid to 2027-01-13T23:59:59+00:00.

What to Verify Next

Before credential or payment interactions, an organization or enterprise should independently confirm that the intended real-world organization administers the domain, review the applicable donation and payment-protection terms, and confirm official contact channels through an independently sourced route. If a formal registration or licensing requirement is relevant to the proposed activity, the applicable registry should be checked directly.

EVIDENCE

- The About Us page provides the appropriate location for matching the site's organizational identity against an independently sourced official record.
- The Donations area provides the relevant context for reviewing payment handling, donation conditions, and available protections.
- The Contact Us and Log In entries identify the channels that should be matched against independently obtained official contact information before sensitive interaction.

Summary Verdict

The overall posture is **high trust and low risk**, with no observed contradiction linking the website to phishing, impersonation, or malicious activity. Available evidence is consistent with an established, apparently legitimate

site, while independent verification of the real-world operator remains incomplete.

Infrastructure Integrity

Amazon CloudFront provides the site's CDN/WAF protection, with observed edge infrastructure and potential origin candidates. This architecture is a mitigating control that reduces direct exposure and supports stable delivery, but it is not by itself proof of organizational legitimacy.

EVIDENCE

- The site is served through AS16509, Amazon.com, Inc., United States.
- Infrastructure resolution identifies Amazon CloudFront as the detected CDN/WAF provider, with 4 observed edge IPs and 1 potential origin candidate.

Closing Assessment

Normal browsing and routine use are proportionate to the current assessment; independent identity, payment-protection, and applicable registry checks should be completed before material credential or payment commitments.

Written analysis generated 2026-08-17 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Signals weighed against the site

- AbuseIPDB: 1 report on hosting IP 52.85.154.98 (Amazon.com, Inc., Data Center/Web Hosting/Transit), 2% confidence. The reports are attributed to shared infrastructure, not specifically to this website.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of jw.org.

- The request stayed on jw.org. It was not redirected to another domain. CLEAR
- Registration is published under Amazon Registrar, Inc.. CLEAR
- DNS for this domain is served by awsdns-41.org, across 4 name servers. NOTED
- The registration is paid up to 2027-03-06. NOTED
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about [jw.org](#) at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
