

Is k551007.cc a scam? TrustSniffer's high-risk assessment: 0/100

k551007.cc

Verdict

0

OUT OF 100

CRITICAL RISK

k551007.cc shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 55%.

What this site appears to be

Chinese-language online casino landing page promoting live dealer and multiple game verticals, with registration CTAs, app download prompt, and several mirror/backup links including raw IP mirrors. No clear licensing, contact, or payment transparency present.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

What k551007.cc served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 1 to 3 years (registration continuity).
- Public web-archive history exists since 2025.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet, Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This Chinese-language website presents an online casino and gambling landing page featuring live dealers, sports betting, electronic and esports games, fishing, card games, registration prompts, an application download, and alternate access routes. Its apparent business model is to attract users to betting activity and deposits through a network of primary and mirror entry points.

Scam/Impersonation Risk

Contradictory risk signals were observed, including confirmed blacklist status and malicious detections from multiple external reputation providers. The homepage promotes registration, application downloading, and raw-IP mirror access while providing limited evidence about the operator, payment arrangements, or service structure. It also uses broad promotional claims such as “international big brand” and “reputation assurance” alongside a copyright range, but the available content does not substantiate those claims. The combination of deposit-before-service mechanics, opaque value flow, alternate access routes, and claim-evidence disparity creates a material risk for credentials, software installation, and financial activity. No separate conflicting legal-

entity names were identified, but the available evidence does not support treating the operator identity as verified.

EVIDENCE

- The homepage is categorized as a gambling/casino mirror landing page and contains registration, application-download, and alternate-route calls to action.
- The homepage lists two raw-IP access routes and several additional mirror domains, and encourages visitors to bookmark both the alternative route and the landing page.
- External reputation assessment recorded 18 malicious detections and 1 suspicious detection among 24 evaluated results; blacklist status was confirmed by two external sources.
- Archive records are dated from 2025-04-06 to 2026-03-07, covering 2 years tracked.

Regulatory Verification Notes

The site's apparent gambling model requires particularly clear operator, licensing, deposit, withdrawal, and consumer-protection disclosures. The captured landing page does not clearly present a licensing authority or license number, nor does it provide clear contact or payment transparency. Identity verification remains unconfirmed; the registrar is a registration service rather than evidence that it operates or endorses the gambling business. A valid transport certificate and mainstream hosting infrastructure establish technical availability, not regulatory authorization or business legitimacy.

EVIDENCE

- The homepage provides no clearly identified licensing authority or license number and does not set out transparent payment or withdrawal terms.
- The domain registration record identifies Gname.com Pte. Ltd. as registrar and records creation on 2026-04-19, with an age of 0.33 years.
- The site is served from AS13335, Cloudflare, Inc., United States.
- TLS is issued by WE1 at DV validation level and is valid to 2026-10-29.

What to Verify Next

Before any sensitive interaction, an institution should independently identify the operating legal entity and confirm any claimed gambling authorization directly with the relevant jurisdictional regulator. Payment, withdrawal, dispute, age-verification, and responsible-gambling terms should be obtained from an independently validated corporate channel rather than from the landing page or its alternate routes. The application should not be installed, and credentials or funds should not be submitted while those checks remain unresolved. Official support and contact channels should be confirmed through an independent, offline route.

EVIDENCE

- The captured page contains no sensitive form, so downstream registration, application, and payment behavior remains unvalidated.
- The homepage relies on registration and application-download prompts rather than presenting a detailed service, compliance, or consumer-protection framework.
- The page's alternate-access design makes independent confirmation of the official operating channel particularly important.

Summary Verdict

The available evidence supports a critical-risk trust posture with material contradictions affecting both site reputation and sensitive interaction safety. The operator's real-world identity is unverified, and the site should not be treated as an established or dependable counterparty for account, credential, software, or financial activity.

Infrastructure Integrity

Cloudflare CDN/WAF protection is present, with observed edge infrastructure associated with AS13335 and no origin server exposed in the analysis. This provides a mitigating layer against direct origin exposure, but it is a hosting and traffic-management control only and does not establish legitimacy.

Closing Assessment

Prospective users and institutions should suspend registration, software installation, credential submission, and financial engagement until independent operator, authorization, and payment-protection checks have been completed through trusted channels.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

01 Governance Risk

- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.

Registration and ownership rule:KF_WHOIS_PRIVATE

- The registration record withholds contact details for the operator.

Registration and ownership rule:KF_WHOIS_HIDDEN

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Analysis engine signal:direct_threat

- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.

External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of k551007.cc.

- The request stayed on k551007.cc. It was not redirected to another domain. CLEAR
- Registration is published under Gname.com Pte. Ltd.. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-04-19. NOTED
- The earliest public archive of this site is from 2025-04-06. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about k551007.cc at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
