

Is kanvex.pl legit? TrustSniffer's high-trust assessment: 100/100

kanvex.pl

Verdict

100

OUT OF 100

HIGH TRUST

kanvex.pl appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-21 by automate analysis. Classification confidence 50%.

What this site appears to be

Polish company KanVex presenting services in sanitary installations, construction and electrical works, plus a wholesale supply offering and a community/center for training and events. Contact details, phone numbers and a contact form are provided.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2021.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

KanVex is a Polish engineering and local-services website presenting sanitary installation, construction, electrical, wholesale-supply, and training or event activities. Its apparent business model is conventional corporate contracting and materials sales for local customers and business partners, supported by service descriptions, project information, contact details, telephone numbers, and a contact form.

Scam/Impersonation Risk

No contradictions were observed. The available evidence shows no phishing, brand-impersonation, malicious-code, or blacklist indicators, and the site's content is consistent with a local construction and engineering business rather than an abuse-oriented or deceptive operating model. The homepage contains a standard contact form rather than a login or credential-capture flow, while observed browser behavior showed no hidden forms, wallet activity, clipboard manipulation, cloaking, or suspicious external posting. This supports an apparently legitimate, low-risk presentation, although the real-world operator identity remains independently unverified.

EVIDENCE

- The homepage is categorized as a corporate/local-services site and contains substantive descriptions of KanVex's engineering, installation, construction, electrical, wholesale, and community activities.
- The homepage presents one ordinary contact form; no login form, hidden sensitive form, or external password-submission destination was observed.
- Technical reputation checks recorded zero malicious detections, zero abuse reports, and no confirmed blacklist or phishing match for the website.
- The domain was registered on 2016-04-04 and is approximately 10.39 years old.

Regulatory Verification Notes

The website presents a conventional commercial-services profile, but the supplied page evidence does not identify a claimed license, license number, or regulatory authority. For this type of construction and supply business, that omission is a transparency and verification matter rather than evidence of deception; any permits, trade qualifications, or sector-specific registrations should be assessed according to the particular service being commissioned. The site's apparent legitimacy is supported by coherent business content and clean observed technical behavior, but the operator's legal identity is not independently verified. The site also lacks some formal publishing enhancements, including structured metadata, which affects discoverability rather than establishing a trust concern.

EVIDENCE

- The homepage identifies KanVex as an engineering enterprise and describes sanitary, construction, finishing, electrical, wholesale, training, and event-related activities.
- The site's transport encryption uses a valid DV certificate issued by YE1, with validity through 2026-11-12.
- The website is served from AS16276 operated by OVH - OVH SAS, FR.
- Historical archive coverage is recorded from 2021-12-09 through 2026-03-07, representing 6 years tracked.

What to Verify Next

Before a commercial engagement, the counterparty's legal name, invoicing details, relevant trade qualifications, and any service-specific permits should be checked through appropriate official or independently sourced records. Contracting parties should also confirm the stated office and contact channels through an independent route, review written scope and warranty terms, and use payment arrangements that provide appropriate documentary and dispute protections.

EVIDENCE

- The contact page provides telephone numbers, contact details, and a contact form suitable for independent cross-checking.
- The site includes an “About the company” area and a “Projects” area that can be compared with independently obtained company and project information.
- The available assessment records the operator identity as unverified, so independent counterparty confirmation remains appropriate before binding commitments.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture for ordinary browsing and business evaluation. No contradictory scam or impersonation signals were identified, while the absence of independent operator-identity verification prevents treating the website’s real-world ownership as proven.

Infrastructure Integrity

The website is protected by a CDN/WAF layer, and all observed addresses were associated with edge infrastructure rather than an identifiable origin. This architecture is a mitigating security measure that can reduce direct exposure of the underlying service, but it is not, by itself, proof of business legitimacy.

Closing Assessment

Ordinary engagement is proportionate to the available evidence, provided that counterparty identity, contractual terms, refund or warranty arrangements, and payment protections are independently confirmed before credentials or payments are exchanged.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of kanvex.pl.

- The request stayed on kanvex.pl. It was not redirected to another domain. [CLEAR](#)
- Registration is published under OVH SAS. [CLEAR](#)

- DNS for this domain is served by ovh.net, across 2 name servers. NOTED
- The registration is paid up to 2027-04-04. NOTED
- The earliest public archive of this site is from 2021-12-09. CLEAR
- It is hosted on OVH, from a server in FR. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about kanvex.pl at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
