Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

Khaleej Times is an established UAE news and media website operated by Galadari Printing and Publishing LLC, presenting current UAE and international reporting alongside business, technology, lifestyle, events, newsletters, subscriptions, mobile applications, and clearly identified partner content.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, or other fraud signals were observed. The site presents a coherent publishing identity and conventional media business model based on advertising, sponsored content, subscriptions, events, and related products; it does not solicit investment deposits or promise financial returns. Its nearly three-decade-old domain, strong global traffic footprint, and clean external threat reputation provide convergent evidence of an established publication rather than a recently created imitation.

- The homepage identifies the publication as Khaleej Times, describes it as the “Voice of the UAE” since 1978, and attributes its operation to Galadari Printing and Publishing LLC.
- The domain was registered in 1996 and is approximately 29.94 years old; registration is maintained through Network Solutions, LLC, with expiry on 2035-08-31.
- The homepage contains no hidden or external password form, suspected impersonation, cloaking, wallet interaction, clipboard hijacking, or suspicious inline scripts.
- External reputation checks recorded 0 malicious and 0 suspicious detections, no safe-browsing threat finding, no abuse reports, and a global traffic rank of 7,918.

Regulatory Verification Notes

The assessed service is a news publisher rather than a financial intermediary or investment platform, so the absence of a financial-services licence claim is consistent with its stated activity and is not an adverse signal. The homepage supplies a clear publisher identity and access to contact and policy information, while commercial material is presented through labels such as “Paid Program” and partner content. No conflicting legal-entity names or adverse broker-reputation match were identified.

- The homepage describes editorial coverage across UAE, world, business, technology, legal, lifestyle, sports, and related news categories.
- Commercial offerings visible on the homepage include subscriptions, newsletters, events, mobile applications, and labeled paid or partner programming.

- The site is served from AS13335 (Cloudflare, Inc., US).
- The site’s transport encryption uses a DV TLS certificate issued by WE1, valid to 2026-09-07.

What to Verify Next

Routine institutional onboarding may confirm that subscription or advertising contracts name the same publishing entity shown on the site, review the applicable payment and cancellation terms, and ensure that commissioned content retains the publication’s visible paid-content labeling. These are standard commercial due-diligence measures, not responses to an identified security concern.

- The homepage offers account sign-in and subscription-related services, creating a conventional need to review contractual terms before organizational purchasing.
- The homepage distinguishes paid programming and partner content from its principal editorial navigation.
- The only detected form is an email-newsletter subscription form; it does not collect sensitive credentials or submit to an untrusted destination.

Summary Verdict

The website has a high-trust posture and is assessed as a legitimate, established publication. Its identity, mature operating footprint, conventional publishing model, and clean security and reputation signals converge without contradiction. Normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

Cloudflare provides the site’s CDN and web-application-firewall layer, with all observed addresses belonging to its edge network. The origin server was consequently shielded from direct observation, which is a normal protective configuration that reduces direct infrastructure exposure but is not, by itself, proof of legitimacy.

Closing Assessment

Prospective users and institutional counterparties may proceed with normal use, applying ordinary commercial review to subscriptions, advertising engagements, or other paid services.

Written analysis generated 2026-08-04 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of khaleejtimes.com.

- The request stayed on khaleejtimes.com. It was not redirected to another domain. CLEAR
- Registration is published under Network Solutions, LLC. CLEAR
- DNS for this domain is served by googledomains.com, across 4 name servers. NOTED
- The registration is paid up to 2035-08-31. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about khaleejtimes.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
