

Is kitscom.net legit? TrustSniffer's high-trust assessment: 96/100

kitscom.net

Verdict

96

OUT OF 100

HIGH TRUST

kitscom.net appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 50%.

What this site appears to be

Website for K.I.T.S, a Kurdistan-region IT and fiber-optic company founded in 2011 offering fiber network installation, wholesale internet services, support and consulting. The site contains company information, services, partners and a contact form protected by reCAPTCHA.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

The page as captured

https://kitscom.net/

What kitscom.net served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2011.
- VirusTotal and Google Safe Browsing had no flags for this domain; its hosting IP carries AbuseIPDB reports below the confidence level TrustSniffer treats as a flag.

Full analysis

Overview

The website presents K.I.T.S. as an established Kurdistan-region telecommunications and IT company founded in 2011, offering fiber-optic network installation, wholesale internet services, technical support, consulting, CCTV and communications solutions, and related business infrastructure services.

Scam/Impersonation Risk

No phishing, impersonation, blacklist, malicious-content, or other identity contradiction was observed. The site's corporate presentation is consistent with a B2B telecommunications provider: it contains substantive service descriptions, company information, partner references, and only a standard contact form, with no login form, wallet connection, credential-harvesting behavior, or sensitive form detected. A limited reputational signal exists because abuse reports were associated with a shared Amazon delivery-network address; the attribution is to shared infrastructure rather than demonstrably to K.I.T.S., so it does not establish site-level abuse. The apparent legitimacy of the website is supported by its long registration continuity and consistent historical business category, but the real-world operator remains independently unverified.

EVIDENCE

- The homepage and About Us content describe K.I.T.S. as established in 2011 and focused on fiber-optic, IT, communications, support, and infrastructure services.
- Domain registration: created 2011-06-02T08:23:33Z, approximately 15.23 years old; registered through GoDaddy.com, LLC.
- Archive records identify the domain from 2011-09-26T13:18:25Z through 2025-07-10T02:16:09Z, representing 15 years tracked.
- Eight abuse reports were associated with the shared delivery-network address 13.248.243.5; the attribution identifies Amazon Technologies Inc. shared infrastructure rather than the website operator.

Regulatory Verification Notes

The available evidence is consistent with an established, apparently legitimate regional corporate website, but it does not independently verify the legal entity operating it. The site describes its business and partner relationships, while the available pages do not provide a license number or named licensing authority; this is a regulatory-disclosure gap requiring confirmation where the proposed service falls within a licensed telecommunications or contracting regime. Registration privacy through Domains By Proxy, LLC is an administrative ownership detail, not an identity contradiction. No separate broker-reputation match was identified, although that contextual result is not a legal or licensing determination.

EVIDENCE

- The About Us, Services, Partners, and Contact Us pages provide corporate, service, partner, and contact content but do not state a license number or licensing authority.
- The site is hosted on AS16509, AMAZON-02 - Amazon.com, Inc., US.
- TLS uses a Go Daddy Secure Certificate Authority - G2 certificate with DV validation, valid through 2026-12-03T23:07:32+00:00.
- The domain registration record lists the registrant organization as Domains By Proxy, LLC and the owner as Registration Private.

What to Verify Next

Before credential or payment interactions, independently confirm the contracting legal entity, its physical business details, and the authority of the relevant representative through an offline or independently sourced channel. Where the engagement involves regulated connectivity, resale, installation, or public-network services, confirm any applicable authorization directly with the relevant telecommunications or commercial registry. For purchases or service deposits, confirm the written contract, refund or termination terms, invoice beneficiary, and payment-protection arrangements before funds are committed.

EVIDENCE

- The website provides separate About Us, Partners, Services, and Contact Us sections that can be matched against independently obtained corporate and commercial records.
- The contact page uses one standard contact form protected by reCAPTCHA and does not expose a sensitive credential form.
- The site identifies a B2B service model involving contracts, wholesale services, support, and project-based consulting, making counterparty and contract verification material to engagement decisions.

Summary Verdict

Available evidence supports a high-trust posture and is consistent with an established, apparently legitimate corporate website. No scam or impersonation contradiction was observed, while independent confirmation of the real-world operator remains incomplete.

Infrastructure Integrity

The website is protected by CDN/WAF infrastructure, with observed edge addresses on AS16509 operated by AMAZON-02 - Amazon.com, Inc.; the origin server was not observable in this analysis. This architecture mitigates direct exposure of the origin and supports operational resilience, but is a protective control rather than proof of business legitimacy.

Closing Assessment

Normal browsing is proportionate to the available risk posture, while ordinary independent counterparty, contractual, and payment-protection checks should precede credential submission or financial commitment.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Signals weighed against the site

- AbuseIPDB: 8 reports on hosting IP 13.248.243.5 (Amazon Technologies Inc., Content Delivery Network), 19% confidence. The reports are attributed to shared infrastructure, not specifically to this website.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of kitscom.net.

- The request stayed on kitscom.net. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by domaincontrol.com, across 2 name servers. NOTED
- The registration is paid up to 2028-06-02. CLEAR
- The earliest public archive of this site is from 2011-09-26. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about kitscom.net at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
