The page as captured

<https://kryptonclient-donutsmp.com/>

What kryptonclient-donutsmp.com served when TrustSniffer captured it on 2026-09-18. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Security Alert

Fortinet, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website presents Krypton Client, a downloadable Fabric 1.21.1 Minecraft modification optimized for DonutSMP, offering more than 60 configurable modules, a HUD editor, installation guidance, and a free-use model with no stated premium tier or paywall.

Scam/Impersonation Risk

The site carries a clearly cautionary risk posture because external threat intelligence recorded multiple malicious and suspicious detections together with a confirmed blacklist hit. This evidence outweighs the relatively polished homepage presentation, which describes the software as a free mod, provides installation instructions and SHA-256 download verification, and states that it is not affiliated with Mojang or DonutSMP. The advertised functionality includes gameplay-affecting modules such as KillAura and Triggerbot, increasing the consequence

of downloading and executing the software even though the page shows no login form, credential collection, or overt phishing behavior. No separate evidence establishes brand impersonation or conflicting legal identities, but the confirmed blacklist and malicious detections are sufficient to make downloading or executing the offered file inappropriate without independent validation.

EVIDENCE

- The homepage describes Krypton Client as a Fabric 1.21.1 download with more than 60 modules, including KillAura and Triggerbot, plus installation instructions and SHA-256 verification.
- External reputation checks recorded 4 malicious and 3 suspicious detections, including threat detections from Fortinet and Sophos.
- A confirmed blacklist hit was recorded by the evaluated external reputation sources.
- Behavioral inspection of the homepage recorded no login form, hidden sensitive form, external POST activity, wallet interaction, or suspicious inline scripts.

Regulatory Verification Notes

The available legal and identity material does not independently verify the real-world operator. The site presents a non-affiliation disclaimer and links to legal information, but the available evidence does not establish a company, accountable publisher, or regulated status. Licensing is not inherently expected for a Minecraft modification, although publisher accountability and software-distribution responsibility remain unresolved. The absence of a broker-dataset match provides limited contextual information and is not a legal or licensing determination. The domain is recently registered, and the transport certificate is domain-validated rather than an organization-validated credential; these are supporting context, not substitutes for publisher verification.

EVIDENCE

- Domain registration: 2026-04-26; age 0.4 years; expiry 2027-04-26.
- The site's transport encryption uses a DV certificate issued by WE1, valid to 2026-11-28T21:39:20+00:00.
- The homepage states that the project is not affiliated with Mojang or DonutSMP and links to Legal, Discord, and GitHub pages.
- The available broker-intelligence dataset returned no match for the site.

What to Verify Next

Before any download or execution, independently confirm that the publisher and project are endorsed through an established, offline-validated channel associated with the relevant Minecraft community; do not rely solely on links or claims presented by the site itself. Obtain the file only from a separately verified distribution source, compare its hash through an independent channel, and analyse it in an isolated environment with execution blocked until the publisher and package provenance are established. Any legal or publisher-identification statements should be checked against independently obtained records rather than the site's own pages.

EVIDENCE

- The homepage directs visitors to a download and installation workflow for executable client-modification software.
- The site provides a SHA-256 value for download verification, creating a specific artifact for independent hash comparison.
- The available identity evidence does not independently connect the project to a verified real-world operator.

Summary Verdict

The website presents a coherent software-download proposition, but the overall trust posture is **critical and unsuitable for sensitive interaction**. Confirmed external threat detections and blacklist status materially undermine confidence in the download despite the site's orderly content and limited observed browser-side behavior. Operator identity also remains unverified.

Infrastructure Integrity

The site is served through Cloudflare's CDN/WAF infrastructure, with observed traffic terminating on Cloudflare edge addresses and no origin candidate visible in the analysis. The infrastructure provides a mitigating layer against direct origin exposure, but it does not validate the publisher or offset the external reputation findings. The confirmed hosting network is AS13335, operated by Cloudflare, Inc. in the United States.

Closing Assessment

The appropriate posture is read-only review while publisher, package provenance, and file integrity are independently established; downloading, executing, or granting the software access to a normal user environment should not proceed on the site's presentation alone.

Written analysis generated 2026-09-18 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

01 Governance Risk

- The public registration record for this domain is incomplete.

Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Analysis engine signal:direct_threat

- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.

External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of [kryptonclient-donutsmp.com](#).

- The request stayed on [kryptonclient-donutsmp.com](#). It was not redirected to another domain. [CLEAR](#)
- Registration is published under Web Commerce Communications Limited dba WebNic.cc. [CLEAR](#)
- DNS for this domain is served by [cloudflare.com](#), across 2 name servers. [NOTED](#)
- The registration is paid up to 2027-04-26. [NOTED](#)
- It is hosted on CLOUDFLARENET, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about [kryptonclient-donutsmp.com](#) at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
