Full analysis

Overview

Kumawat Vivah Portal is a community-specific matrimonial service for Kumawat Samaj members, presenting verification-gated profile registration, member-only matchmaking, and premium contact access funded through internal “coins” and paid plans.

Scam/Impersonation Risk

No contradictions were observed. The available evidence does not indicate phishing, impersonation, malicious behavior, or a confirmed adverse reputation signal. The site’s stated focus on community membership, profile review, privacy controls, and safety guidance is consistent with its matrimonial-service purpose, although the collection of identity documentation makes the handling of sensitive information an important consideration for prospective users.

EVIDENCE

- The homepage presents “Kumawat Vivah Portal” as a matrimonial service for Kumawat Samaj and provides verification and safety-oriented member features.
- Archive-reconciled domain history dates to 2016, with an age of 9.88911704312115 years.
- The site's observed login and registration behavior showed no hidden forms, external password submission, wallet activity, cloaking, or suspicious scripts.

Regulatory Verification Notes

The service appears to operate as a matrimonial and community portal rather than a financial or investment service. Its pages describe Aadhaar or Samaj-proof review, gotra and family-detail checks, administrator approval, privacy protections, and paid access features; however, the available content does not clearly establish the legal operator or disclose a licensing or registration basis. This is a transparency and identity-verification matter, not evidence of impersonation or fraud. The site's transport security and hosting are technically established, while a domain-validated certificate confirms encryption but does not independently validate the operator.

EVIDENCE

- The registration and document-upload flow is a sensitive form handling member details and verification documentation.
- Hosting is identified as AS47583, AS-HOSTINGER — Hostinger International Limited, CY; the resolved hosting country is LT.
- The site's TLS certificate is issued by YE2 at DV validation level and is valid to 2026-09-28T00:59:20+00:00.

What to Verify Next

Before sensitive submissions or material payments, an independent check should confirm the operator's legal name, the applicable privacy and retention terms for submitted documents, the basis for profile verification, and the conditions governing paid access and refunds. Contact channels should be confirmed through an independently obtained route, and any payment recipient should match the verified business identity rather than an informal individual account.

EVIDENCE

- The homepage exposes registration, login, FAQ, consultation, and contact-related functions that can be reviewed against the site's governing terms.
- The service describes administrator-reviewed profiles and member-only contact controls, providing specific claims that can be tested through the published policies and support process.

Summary Verdict

The website presents a **moderate-trust posture** with no observed scam or impersonation contradictions. Its apparent purpose and operating model are internally consistent, but the real-world operator identity is not independently verified and the available disclosure position does not support treating legitimacy as proven.

Infrastructure Integrity

The site is not reported as operating behind a detected CDN edge; two likely origin addresses were identified in the hosting resolution. This provides ordinary technical reachability but limited additional assurance about organizational identity, so infrastructure should be treated as a supporting technical signal rather than proof of legitimacy.

Closing Assessment

Ordinary browsing may proceed, but independent confirmation of the operator and service terms is appropriate before submitting sensitive information or committing significant funds.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about kumawatviah.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
