

Is lancloud.ru legit? TrustSniffer's high-trust assessment: 90/100

lancloud.ru

Verdict

90

OUT OF 100

HIGH TRUST

lancloud.ru appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-13 by automated analysis. Classification confidence 70%.

What this site appears to be

LanCloud corporate site describing cloud infrastructure and SaaS offerings for business customers (IaaS, backup, DRaaS, VDI, Cloud Exchange, Cloud 1C), pricing starting points, certifications (Microsoft Gold, TIER-III), SLA claims and client testimonials. Primary goal: sell subscription cloud services to enterprises.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2013.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

LanCloud is a Russian-language corporate cloud-services website presenting business-focused IaaS and SaaS offerings, including virtual servers, backup, disaster recovery, VDI, business email and collaboration, and Cloud 1C services; its apparent model is subscription-based enterprise infrastructure supported by commercial contracts, pricing information, and a free trial.

Scam/Impersonation Risk

No contradictions were observed: the available evidence contains no confirmed phishing, impersonation, or malicious-website findings, and the site does not present login forms, hidden sensitive forms, wallet-connect functionality, or credential-harvesting behavior. A presentation-similarity signal associated the page with cloud.microsoft, but the website openly describes Microsoft-based services and the analysis did not identify suspected brand impersonation. Dynamic testing observed ordinary external activity and page changes without cloaking, clipboard manipulation, wallet-drainer behavior, or other high-risk abuse patterns. The overall evidence is therefore consistent with an established, apparently legitimate corporate website, while independently verifying the real-world operator remains outside the available evidence.

EVIDENCE

- Domain registration records show creation on 2012-01-26, making the domain approximately 14.55 years old.
- The web archive records 169 snapshots from 2013-08-15 through 2025-11-16, covering 13 tracked years.
- The homepage was classified as a corporate cloud-services landing page with no listed red flags, no login form, and no sensitive form destination.
- External reputation checks recorded no malicious or suspicious detections for the domain.

Regulatory Verification Notes

The website describes a commercial technology-services business rather than a regulated financial activity. Its homepage claims Microsoft Gold and TIER-III certifications, service-level commitments, customer testimonials, and business contact channels; these are substantive commercial disclosures, although the supplied evidence does not independently validate the certifications or establish the legal operator behind the site. No financial-services license or registration number is presented in the available material, so licensing is a transparency point to resolve only if the proposed engagement involves a regulated service. A mid-level public authority signal

and the absence of a broker-dataset match provide contextual support but are not legal or licensing determinations.

EVIDENCE

- The domain registrar is DOMENUS-RU; the recorded expiration date is 2027-01-26.
- The site is served from AS208777, identified as RU-LANCLOUD-AS01 – LANKEY INFORMATION TECHNOLOGIES LLC, Russia.
- The transport certificate is issued by GlobalSign GCC R6 AlphaSSL CA 2025, uses DV validation, and is valid through 2027-02-09.
- The homepage presents certification, SLA, pricing, contract, and trial claims for business customers.

What to Verify Next

Before credential or payment interactions, an enterprise counterparty should independently confirm the contracting legal entity, its authority to provide the proposed service, and the applicable service and data-processing terms. Certification claims should be validated through the relevant certification or vendor channels, and any payment arrangement should use documented contractual protections, defined refund or termination terms, and an appropriate payment-protection mechanism. Contact channels should also be confirmed through an independent route before material onboarding or funds transfer.

EVIDENCE

- The homepage identifies business-oriented services, commercial contracts, pricing starting points, and a free one-month trial.
- The site's stated certifications and SLA commitments provide specific claims that can be checked against the named standards or vendors.
- The available identity evidence supports apparent establishment but does not independently connect the website to a verified real-world operator.

Summary Verdict

The available evidence is consistent with an established, apparently legitimate website with a high-trust, low-risk posture and no observed scam or impersonation contradiction. The conclusion supports ordinary business engagement in principle, but it does not constitute independent proof of the operator's real-world identity.

Infrastructure Integrity

The site resolves directly to two likely origin addresses rather than through a detected CDN or WAF edge, with hosting provided by LANKEY INFORMATION TECHNOLOGIES LLC on AS208777 in Russia. This direct-hosting arrangement offers less intermediary shielding than mainstream edge infrastructure, but the identified provider, resolved service, and valid certificate indicate a functioning and technically coherent deployment; infrastructure alone is not proof of legitimacy.

Closing Assessment

Prospective users should complete ordinary independent merchant-identity, contractual, service-terms, and payment-protection checks before submitting credentials or making payments, with the depth of review proportionate to the value and sensitivity of the engagement.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of lancloud.ru.

- The request stayed on lancloud.ru. It was not redirected to another domain. CLEAR
- Registration is published under DOMENUS-RU. CLEAR
- DNS for this domain is served by 86.100, across 3 name servers. NOTED
- The registration is paid up to 2027-01-26. NOTED
- The earliest public archive of this site is from 2013-08-15. CLEAR
- It is hosted on RU-LANCLOUD-AS01, from a server in RU. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about lancloud.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
