

Is lestetelecom.com.br legit? TrustSniffer's high-trust assessment: 100/100

lestetelecom.com.br

Verdict

100

OUT OF 100

HIGH TRUST

lestetelecom.com.br appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not ScamLow Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 70%.

What this site appears to be

Corporate website for Leste Telecom, a regional ISP offering 100% fiber-optic internet plans, mobile service, camera/security products, apps for customers, and 24h support. Page includes company legal name, postal address, phone contacts, awards, and mentions of social channels.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2008.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is the corporate online presence of Leste Telecom, a Brazilian telecommunications provider presenting 100% fiber-optic internet plans, mobile connectivity, camera and security products, customer applications, and continuous support for consumer and business customers.

Scam/Impersonation Risk

No contradictions were observed across the reviewed pages and technical signals: there is no detected phishing, impersonation, malicious-content, or confirmed blacklist finding. The homepage presents a coherent telecommunications business model, identifies Leste Telecom, provides contact and location information, and describes ordinary subscription services rather than abuse-prone financial or cryptocurrency mechanisms. The site also links to established social-contact channels and does not expose a login form, password-collection form, wallet connection, or hidden sensitive form during the observed interaction. Historical evidence is consistent with continuity rather than suspicious repurposing, although the real-world operator identity remains likely rather than independently verified.

EVIDENCE

- The homepage identifies Leste Telecom as a corporate internet-service provider and presents fiber, mobile, camera, customer-app, and support services.
- The homepage was first archived on 2008-03-14 and last archived on 2026-08-04, with 120 snapshots across 19 tracked years.
- The observed site behavior contained 0 wallet-connect runs, 0 wallet-sensitive runs, 0 wallet-drainer runs, 0 hidden forms, and 0 external password forms.
- External reputation checks recorded 0 malicious and 0 suspicious detections, with no confirmed blacklist finding.

Regulatory Verification Notes

The available evidence is consistent with an established, apparently legitimate regional telecommunications business. The site presents a company legal name, postal address, telephone contacts, service information, awards, and customer-support channels, while the transport certificate is organization-validated. The reviewed pages do not present a licensing or registration number; for a telecommunications provider, this is a disclosure item to confirm through the applicable Brazilian regulatory and corporate records rather than evidence of

impersonation or fraud. The available third-party broker dataset produced no matching signal, but that absence is contextual reputation information and is not a licensing determination.

EVIDENCE

- The homepage identifies the legal entity as “LESTE FLU SERVICOS DE TELECOM LTDA” and includes a postal address and telephone contacts.
- The domain was registered on 2013-02-24, with an age of 13.47 years and an expiration date of 2029-02-24.
- The site is served from AS262664, GIGALINE INTERNET SERVICOS DE INFORMATICA LTDA, Brazil.
- The TLS certificate is issued by Go Daddy Secure Certificate Authority - G2, uses OV validation, and is valid to 2026-10-04.

What to Verify Next

Before credential or payment interactions, an organization should independently match the legal entity and service address against the relevant Brazilian corporate and telecommunications records, confirm any authorization applicable to the offered services, and ensure that customer-support channels are reached through independently sourced contact details. Subscription terms, installation charges, cancellation conditions, refund treatment, and payment-protection arrangements should also be reviewed before commitment.

EVIDENCE

- The homepage provides the legal name, address, telephone contacts, service descriptions, and customer-support channels needed for independent comparison.
- The site describes paid internet, mobile, camera, and related support services, making contract terms and recurring-billing conditions the relevant due-diligence focus.
- The homepage links to WhatsApp, Instagram, Facebook, Telegram, and X as support or social channels.

Summary Verdict

The overall posture is **high trust and low risk**, with the available evidence strongly consistent with an established and apparently legitimate website. No scam, impersonation, phishing, or other contradiction was identified, but the operator connection is not independently proven and should therefore remain qualified rather than treated as verified identity.

Infrastructure Integrity

The site resolves to a single direct hosting address rather than a detected CDN or WAF edge, so it does not benefit from the additional origin-obscuring and traffic-filtering characteristics of mainstream edge protection. The observed infrastructure is nevertheless a resolved, identifiable hosting arrangement, and this architectural observation does not alter the high-trust determination.

Closing Assessment

Normal browsing and ordinary service evaluation are proportionate to the assessed posture; independent identity, contractual, and payment-protection checks should be completed before submitting credentials or committing to a paid service.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	79/100
Identity verification confidence	78%

- Trusted social count=3

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of lestetelecom.com.br.

- The request stayed on lestetelecom.com.br. It was not redirected to another domain. CLEAR
- DNS for this domain is served by 32.85 2804:3d28:ffff:fffd:186:211:32:85, across 4 name servers. NOTED
- The registration is paid up to 2029-02-24. CLEAR
- The earliest public archive of this site is from 2008-03-14. CLEAR
- It is hosted on AS262664, from a server in BR. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about lestetelecom.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
