Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2022.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is the corporate online presence of Ligga Telecom, a Brazilian telecommunications provider offering residential and business fiber internet, mobile connectivity, television, streaming, and related digital services, with facilities for coverage checks, billing access, customer support, and locating physical stores.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing behavior, malicious reputation findings, or other scam indicators were observed. The domain has a multi-year operating history aligned with the Ligga Telecom identity, while interactive testing found no hidden forms, credential diversion, cloaking, clipboard manipulation, or suspicious external network activity. Its sole homepage form performs a postal-code coverage lookup and neither requests sensitive information nor submits data to an untrusted destination.

- The homepage identifies Ligga Telecom as a Brazilian telecommunications provider and presents consistent corporate, customer-service, investor, policy, and store information.
- The domain was registered in 2022 and is approximately 4.08 years old; the registration record names Ligga Telecomunicações S.A. as owner.
- The web archive contains 27 snapshots spanning 2022–2023, representing 2 years of tracked history, with no detected semantic drift or suspicious repurposing.
- External reputation checks recorded 0 malicious and 0 suspicious classifications, no safe-browsing detection, no reported infrastructure abuse, and no signature matches.

Regulatory Verification Notes

The homepage provides a Brazilian corporate registration number and links or references company information, investor materials, and policies, supporting a coherent legal and commercial identity. The supplied evidence does not establish a specific telecommunications licence or identify an authoritative regulatory registry entry; this is a limited disclosure-verification point, not evidence of impersonation or misconduct. No matching third-party broker profile was identified, which has no material bearing on a telecommunications provider's legitimacy.

- The homepage publishes a Brazilian corporate registration number alongside company and investor information.
- The homepage provides sales and support telephone numbers, billing access, policy information, and physical-store addresses.
- The hosting infrastructure is served from AS19551 (INCAPSULA - Incapsula Inc, US).
- The site’s transport encryption uses a TLS certificate issued by Thawte TLS RSA CA G1 with DV validation, valid to 2026-09-13.

What to Verify Next

For regulated procurement or supplier onboarding, the legal name and corporate registration should be matched against the relevant Brazilian company registry, and any required telecommunications authorisation should be confirmed through the applicable regulator. Contracting parties should also reconcile payment instructions and official contact channels through independently sourced corporate records before establishing a material commercial relationship.

- The company-information and investor areas provide the identity materials needed for registry reconciliation.
- The policy materials provide a basis for legal, privacy, and contractual review.
- The published physical-store information provides an independent route for confirming the company’s operational presence.

Summary Verdict

The website is a legitimate, established, and trustworthy corporate service channel. Its coherent identity, sustained provenance, clean security reputation, professional customer-service content, and benign observed behavior converge strongly in support of normal interaction, including account login and standard use.

Infrastructure Integrity

The website is protected by Imperva CDN/WAF infrastructure, and all four observed addresses were protective edge servers rather than exposed origin infrastructure. This reduces direct attack-surface exposure and supports operational resilience, although protective infrastructure is a security control rather than independent proof of legitimacy.

Closing Assessment

Prospective customers may use the website normally, while regulated or high-value commercial engagements should follow ordinary corporate onboarding and counterparty-validation procedures.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of [liggavc.com.br](#).

- The request stayed on [liggavc.com.br](#). It was not redirected to another domain. CLEAR
- DNS for this domain is served by [impervasecuredns.net](#), across 3 name servers. NOTED
- The registration is paid up to 2027-07-05. NOTED
- The earliest public archive of this site is from 2022-08-26. CLEAR
- It is hosted on [INCAPSULA](#), from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about [liggavc.com.br](#) at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
