Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2016.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Mandlothbrok is a corporate services website presenting engineering, IT infrastructure, cybersecurity, cloud migration, and software development capabilities to business visitors. Its apparent business model is based on project fees, consulting engagements, and ongoing support services.

Scam/Impersonation Risk

No contradictions were observed across the supplied evidence: there were no phishing, impersonation, malicious-content, or blacklist indicators, and the site's behavior showed no login form, sensitive submission flow, wallet activity, cloaking, or suspicious external activity. The service descriptions, project-oriented presentation, and contact functionality are coherent with a conventional business-to-business services model. The domain also presents as long-established, with sustained historical continuity, which supports—but does not independently prove—the apparent legitimacy of the current operator.

EVIDENCE

- The homepage presents Mandlothbrok as an engineering, IT, and software development company, with service descriptions, project claims, and a business inquiry pathway; no phishing or brand-impersonation indicator was identified.
- The site's behavioral inspection recorded 2 successful runs, 0 external XHR requests, 0 hidden forms, 0 wallet-provider detections, and 0 cloaking detections.
- Domain registration: 2014-07-30; age 12.07 years; registrar GoDaddy.com, LLC.
- Web-archive history: 505 snapshots from 2016-06-30 through 2026-02-28, spanning 11 years tracked, with a maximum gap of 1 year.

Regulatory Verification Notes

Available evidence is consistent with an established, apparently legitimate corporate website, but the real-world operator identity is not independently verified. The reviewed content describes engineering, IT, and software services and provides business contact details, while no licensing authority or license number is stated; whether a license is required depends on the specific services and jurisdictions involved. This is a transparency item for ordinary commercial due diligence, not evidence of scam activity. No broker-dataset match was identified, although that contextual signal is not a legal or licensing determination.

EVIDENCE

- The homepage and service content describe engineering, IT infrastructure, cloud migration, cybersecurity, and software product engineering services for business customers.
- The reviewed corporate content does not state a licensing authority or license number.
- Hosting telemetry: served from AS51167, Contabo GmbH, Germany.
- Transport security telemetry: TLS certificate issued by YR1 at DV validation level, valid to 2026-09-30T10:37:26+00:00.

What to Verify Next

Before credential or payment interactions, an organization should independently confirm the contracting entity behind Mandlothbrok, validate the published business contact channels through an offline or independently sourced route, and determine whether any engineering or professional authorization is required for the intended engagement. Contracts should identify the legal counterparty, scope of work, payment terms, support obligations, dispute process, and applicable payment protections.

EVIDENCE

- The contact page supplies a phone number, email address, Kampala, Uganda address, and an inquiry form that can be cross-checked independently.
- The site's stated delivery model involves project work, consulting, and support engagements, making counterparty and contract-term validation directly relevant before payment.

Summary Verdict

The website has a high-trust, low-risk posture and the available evidence is consistent with an established, apparently legitimate corporate services operation. The assessment supports normal browsing and ordinary business engagement, while the operator’s real-world identity remains independently unverified.

Infrastructure Integrity

The site is hosted directly by Contabo GmbH in Germany, with no CDN detected and a single likely origin address identified. This is a conventional hosting arrangement and provides limited edge-layer mitigation; hosting infrastructure is a supporting technical signal, not proof of organizational legitimacy.

Closing Assessment

Routine interaction is proportionate to the assessment, with ordinary independent counterparty, contractual, and payment-protection checks completed before credentials or funds are committed.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of mandlothbrok.com.

- The request stayed on mandlothbrok.com. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by africaonecloud.com, across 2 name servers. NOTED
- The registration is paid up to 2027-07-30. NOTED
- The earliest public archive of this site is from 2016-06-30. CLEAR
- It is hosted on CONTABO, from a server in DE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about mandlothbrok.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
