Full analysis

Overview

MarketBeat is an established financial media and investment-research portal presenting stock news, market data, screeners, portfolio tools, newsletters, and paid premium research through an advertising-, sponsorship-, subscription-, and account-supported business model.

Scam/Impersonation Risk

No contradictions were observed across the supplied evidence: there are no confirmed phishing, impersonation, or blacklist findings, and the site's homepage presents a coherent financial-news and research identity. Its account and newsletter forms are consistent with the stated service model, while behavioral testing found no cloaking, hidden forms, wallet-drainer activity, clipboard hijacking, or suspicious inline scripts.

EVIDENCE

- The homepage identifies MarketBeat as a stock-market news and research portal and presents research tools, portfolio features, newsletters, and account functions.
- The domain was registered in 1997 and is approximately 28.95 years old.
- The site has 5,000 archive snapshots spanning 2010–2017, covering 8 tracked years.

Regulatory Verification Notes

The homepage and associated legal/contact navigation provide a conventional disclosure framework for a financial-information business, but the supplied evidence does not establish a regulatory license or registration number. This is a transparency item for applicable jurisdictional review, not evidence of deception. The site's business model is informational and subscription-supported, with no indication that it presents itself as a licensed broker or investment manager.

EVIDENCE

- The homepage is classified as a financial-news and research portal with a low-risk informational profile.
- The site is hosted on AS13335 (Cloudflare).
- TLS is issued by WE1 using DV validation and is valid through 2026-10-27.
- No matching third-party broker-reputation record was identified.

What to Verify Next

For any regulated investment service offered in a specific jurisdiction, confirm the relevant entity and licensing status through the applicable official registry, and independently validate official contact and subscription terms before entering a commercial arrangement.

EVIDENCE

- The homepage contains account, newsletter, and SMS-related forms.
- The site provides legal links and contact details alongside its normal account functionality.
- The stated business model includes advertising, sponsored content, newsletters, and paid premium research.

Summary Verdict

MarketBeat presents as a legitimate, established, and trustworthy financial-information website with strong convergence among its identity, historical continuity, content quality, and technical signals. Normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

Cloudflare provides the site's CDN and WAF protection, and observed addresses are Cloudflare edge infrastructure rather than a directly exposed origin. This reduces direct exposure of the hosting environment and is a mitigating infrastructure characteristic, not independent proof of legitimacy.

Closing Assessment

MarketBeat is suitable for normal research and account use; jurisdiction-specific licensing checks remain appropriate where a proposed service or transaction falls within regulated activity.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about marketbeat.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
