

Is mayan-tech.com safe? TrustSniffer's low-trust assessment: 25/100

mayan-tech.com

Verdict

25

OUT OF 100

LOW TRUST

mayan-tech.com is low-trust and potentially risky.

Several risk patterns were present. Do not send money or personal details until you have verified this business another way.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 55%.

What this site appears to be

Mayan Technology is a Guatemala-based software development company (founded 2010) offering custom development, consulting, migrations, BI, mobile apps and an ERP product called MyFinancERP. Contact and phone/email provided; content is marketing/corporate in nature.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

What mayan-tech.com served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2011.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

Mayan Technology is a corporate website presenting itself as a Guatemala-based software development company founded in 2010, offering custom software development, consulting, systems migration, business intelligence, mobile applications, training, support, and the MyFinancERP enterprise resource planning product.

Scam/Impersonation Risk

The site's pages are corporate in presentation and do not show a login form, credential-collection workflow, wallet connection, or other obvious page-level phishing mechanism. However, this benign presentation is outweighed by confirmed external contradictions: the domain is blacklisted by multiple sources, including one source reporting multiple malicious detections. The observed behavior also included suspicious inline scripts. No conflicting legal-entity names or direct brand-impersonation indicators were identified on the supplied pages, but the confirmed blacklist status creates a high risk for sensitive interaction and cannot be neutralized by the site's professional appearance.

EVIDENCE

- External reputation assessment: the domain is blacklisted, with 7 malicious detections recorded among evaluated results.
- Behavioral analysis: 2 suspicious inline scripts were observed; no hidden forms, password-external forms, wallet connections, or clipboard-hijacking activity were detected.
- Homepage: the content is corporate and service-oriented, with no page-level red flags identified.

Regulatory Verification Notes

The website presents Mayan Technology as an established software-services provider and describes service fees, software licensing, support, and training as its commercial model. Its claims of being founded in 2010 and of having more than 10 years of experience are on-site assertions, not independent confirmation of the operating entity. The registration record names Carlos Alberto Ramirez Mendoza and uses Bluehost Inc. as registrar, but this does not independently establish that the registrant operates the business presented on the website. The available material does not establish a regulated financial activity or provide a verified regulatory license; the principal issue is therefore identity and disclosure verification rather than a conclusion that the software business itself requires financial regulation.

EVIDENCE

- Domain registration: created 2011-08-30T01:33:40Z, age 14.98 years, expiration 2027-08-30T01:33:40Z, registrar Bluehost Inc., registrant Carlos Alberto Ramirez Mendoza.
- Hosting telemetry: served through AS13335, CLOUDFLARENET - Cloudflare, Inc., US.
- Transport security: TLS certificate issued by WE1 with DV validation, valid to 2026-09-28T08:03:07+00:00.
- Homepage and company-content pages: identify Mayan Technology and describe software development, consulting, migration, BI, mobile, support, training, and MyFinancERP services.

What to Verify Next

Before any commercial engagement, an independent counterparty check should confirm that the organization named in the website's company and contact materials is a legally registered entity and that the independently obtained contact channels reach that entity. The prospective customer should obtain a written statement of work, software licensing terms, support commitments, data-processing obligations, and payment protections before sharing business information or authorizing payment. Any claimed corporate registration or sector-specific authorization should be checked directly with the relevant official registry rather than relying on the website's own statements.

EVIDENCE

- About/company pages: contain the site's founding and experience claims that require independent corroboration.
- Contact page: provides the stated business contact routes to be validated through an independent channel.
- Services and MyFinancERP pages: define the commercial scope for which contractual, support, licensing, and data-handling terms should be obtained.

Summary Verdict

The overall posture is **low trust with sensitive-interaction risk**. A professional corporate presentation and technically valid delivery do not overcome the confirmed external reputation contradictions, while the real-world operator remains independently unverified.

Infrastructure Integrity

Cloudflare CDN/WAF protection is a mitigating infrastructure control that reduces direct exposure of the hosting environment, but all observed addresses were CDN edge infrastructure and the origin server was not independently observable. This protection supports delivery resilience; it is not evidence that the underlying operator is legitimate.

EVIDENCE

- Network infrastructure: 4 observed edge IP addresses, with 0 likely origin IP addresses identified, all associated with AS13335.
- CDN/WAF: Cloudflare detected as the protective provider; edge address observed at 172.67.204.113.
- Transport layer: DV TLS protection was present through issuer WE1.

Closing Assessment

Until the independent counterparty and contractual checks are completed, activity should remain limited to non-sensitive review, with no credential submission, confidential-data sharing, or payment authorization.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox, external reputation.

01 Governance Risk

- The public registration record for this domain is incomplete.

Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- The page carried inline scripts written in a style TrustSniffer treats as suspicious.
Behaviour in a sandbox rule:BEHAV_SUSPICIOUS_INLINE_SCRIPTS
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of mayan-tech.com.

- The request stayed on mayan-tech.com. It was not redirected to another domain. CLEAR
- Registration is published under Bluehost Inc.. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-08-30. NOTED
- The earliest public archive of this site is from 2011-10-06. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about mayan-tech.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
