Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2004.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

MDTec Soluciones IT is a Córdoba-based corporate technology website presenting web development, ecommerce solutions, business systems, technical support, IT consulting, and digital security services including CCTV, access control, fibre optics, and home or business automation. Its apparent business model is to serve organisations and other clients through contracted technology services and related hardware sales.

Scam/Impersonation Risk

No contradictions were observed across the site's corporate, contact, service, and client-facing content. The available checks identified no phishing, impersonation, malicious-content, or blacklist indicators, and the site does not present cryptocurrency, investment, or other unusually high-risk financial solicitations. Its behaviour was also consistent with an ordinary business website: no password form, hidden form, wallet connection, clipboard manipulation, cloaking, or suspicious script activity was detected.

EVIDENCE

- The homepage identifies MDTec Soluciones IT and provides service descriptions, contact details, client areas, and a careers section without detected scam red flags.
- Domain continuity dates to 2004, with an assessed age of 22.12 years.
- Historical records contain 119 snapshots spanning 2004–2025, covering 22 tracked years.
- Available external reputation checks returned zero malicious detections, zero suspicious detections, zero abuse reports, and no broker-dataset match.

Regulatory Verification Notes

The reviewed content gives a coherent commercial identity and describes an established-looking IT-services operation, but the real-world operator has not been independently verified. No licence, registration number, or regulator is identified in the supplied page content; for this apparent technology and ecommerce business, that is a transparency and applicability question rather than evidence of fraud. Any commercial engagement should therefore distinguish the site's credible presentation from independently confirmed legal-entity status. The transport security and identifiable hosting arrangement are positive technical indicators, although a domain-validated certificate authenticates encrypted delivery rather than the underlying operator.

EVIDENCE

- The site is hosted on AS27823 (Dattatec.com, AR).
- TLS uses a DV certificate issued by Sectigo Public Server Authentication CA DV R36, valid through 2026-10-07.
- The homepage contains a single contact form and no detected sensitive form destination.
- The reviewed identity and contact navigation presents company, client, support, and contact sections but no supplied licence or registration number.

What to Verify Next

Before credential submission or payment, an independent check should confirm the contracting entity behind MDTec, its applicable local business status, and the authority of any person representing it. For ecommerce transactions, the prospective counterparty should also confirm applicable return terms, invoicing arrangements, and payment protections through an independently sourced contact route rather than relying solely on information reached through the website.

EVIDENCE

- The homepage provides a telephone contact, a company email address, a contact form, and named business sections that can be compared against independently obtained records.
- Behavioural testing recorded two successful runs, with no login form, wallet connection, hidden sensitive form, or external password submission detected.

Summary Verdict

The available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture. No scam or impersonation contradictions were observed, while the absence of

independent operator verification means legitimacy should be regarded as evidence-consistent rather than proven.

Infrastructure Integrity

The site’s technical delivery is supported by identifiable hosting and valid encrypted transport. The supplied facts do not establish a specific CDN, WAF, or origin-separation architecture; in any event, protective infrastructure would mitigate exposure rather than independently establish operator identity.

Closing Assessment

Prospective users should complete ordinary independent merchant-identity, applicable return-policy, and payment-protection checks before entering credentials or authorising payments.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of mdtec.com.ar.

- The request stayed on mdtec.com.ar. It was not redirected to another domain. CLEAR
- The earliest public archive of this site is from 2004-07-08. CLEAR
- It is hosted on AS27823, from a server in AR. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about mdtec.com.ar at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
