Is me.ma legit? TrustSniffer's high-trust assessment: 80/100

me.ma

Verdict

80
OUT OF 100

HIGH TRUST

me.ma appears legitimate.

> Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam | Safe for Login | Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 75%.

What this site appears to be	Landing page for a free website hosting and subdomain provider. Encourages users to register free subdomains and use a drag-and-drop editor; monetized via ads and paid upgrades. Includes consent management UI listing many ad/vendor partners and a visible contact email.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2011.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

me.ma is a consumer-facing free web-hosting and subdomain platform that presents domain availability searches, no-code website creation, mobile optimization, unlimited traffic, help resources, and optional paid upgrades for expanded services. Its apparent business model is to attract users with free hosting and monetize the platform through advertising, consent-managed vendor integrations, and premium features.

Scam/Impersonation Risk

No phishing, malware, blacklist, or brand-impersonation contradictions were observed. The homepage is consistent with a free hosting and website-builder service: it promotes free subdomains such as .me.ma and related subdomains, a drag-and-drop creation experience, and claims that more than 149,115 users have launched websites on the platform. The domain resembles me.com, but the site's actual content presents a distinct hosting-service proposition rather than copying that brand; this is therefore a similarity signal, not an identity contradiction. The homepage also exposes no login form, hidden form, password-exfiltration form, wallet connection, or other sensitive interaction in the observed capture.

EVIDENCE

- Homepage: describes free subdomain hosting, website creation tools, mobile optimization, unlimited traffic, and a domain-search function.
- Homepage interaction review: recorded two forms limited to domain search and a sign-up link, with no sensitive form or external password form.
- External reputation telemetry: 0 malicious detections, 0 suspicious detections, 0 abuse reports, and no blacklist hit.
- Domain registration: Registered 2011-04-03 (~15.36 years old) through ARCANES TECHNOLOGIES.

Regulatory Verification Notes

The available evidence is consistent with an established, apparently legitimate software service, but the real-world operator identity is not independently verified. The site content does not present a financial, investment, or other regulated-service proposition, and no license claim or registration number is disclosed in the supplied pages; this is a transparency point for ordinary commercial due diligence rather than evidence of a scam. The business model is clearly described as free hosting supported by advertising and paid upgrades, while the consent interface identifies extensive advertising and vendor participation. No adverse broker-reputation match was identified.

EVIDENCE

- Archive provenance: 342 snapshots spanning 2011–2025, representing 15 years tracked with continuous historical activity.
- Hosting telemetry: Served from AS13335 (Cloudflare; CLOUDFLARENET - Cloudflare, Inc., US).
- Transport security: TLS certificate issued by WE1, validation level DV, valid to 2026-10-04.
- Homepage and support content: identifies free hosting, subdomain registration, website-building tools, advertising-supported operation, and paid upgrades; no license number is presented.

What to Verify Next

Before credential or payment interactions, an enterprise or consumer user should independently confirm the operating entity associated with the service, review the applicable terms for subdomain ownership and account suspension, and examine refund or payment-protection arrangements for any paid upgrade. Official support and contact channels should also be confirmed through an independent route, particularly before resolving account or billing issues.

EVIDENCE

- Homepage: provides sign-up and login pathways and promotes free subdomain registration.
- Help and FAQ content: provides the stated support and service-information context for account use.
- Privacy and consent interface: provides the relevant location for reviewing advertising, analytics, and vendor-consent choices.

Summary Verdict

The overall posture is **high trust and low risk**, with the available evidence converging on an established, apparently legitimate website and no observed scam or impersonation contradictions. The classification supports ordinary interaction, subject to the operator-identity uncertainty and routine commercial checks appropriate for any paid online service.

Infrastructure Integrity

The site is protected by CDN/WAF infrastructure attributed to Akamai and Cloudflare. Observed addresses were CDN edge servers, with no origin candidate identified; this limits direct exposure of the hosting environment and is a mitigating security measure, but it is not proof of operator legitimacy.

EVIDENCE

- Infrastructure: five observed edge addresses were associated with AS13335.
- CDN/WAF posture: infrastructure records identify Akamai and Cloudflare edge protection, with 5 edge IPs and 0 likely origin IPs.
- Hosting provider: CLOUDFLARENET - Cloudflare, Inc., US, in the United States.

Closing Assessment

Proceeding is proportionate for normal service evaluation, provided independent merchant-identity, terms, and payment-protection checks are completed before submitting credentials or making paid commitments.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of me.ma.

- The request stayed on me.ma. It was not redirected to another domain. CLEAR
- Registration is published under ARCANES TECHNOLOGIES. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-04-03. NOTED
- The earliest public archive of this site is from 2011-04-23. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about me.ma at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
