

Is mechanicusa.org safe? TrustSniffer's moderate-trust assessment: 50/100

mechanicusa.org

Verdict

50

OUT OF 100

MODERATE TRUST

mechanicusa.org is moderately trusted.

Most signals looked ordinary, and some evidence was missing. Read the checks below before you pay or hand over personal details.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-22 by automated analysis. Classification confidence 55%.

What this site appears to be

An automotive blog named 'MECHANIC AND CAR MEMES' publishing articles and videos about mechanics, DIY builds, restorations and tool tips. No forms, financial offers, or credential prompts visible in the provided content.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

MECHANIC & CAR MEMES

"All About Mechanic"

What mechanicusa.org served when TrustSniffer captured it on 2026-08-22. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2019.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

MechanicUSA.org presents "MECHANIC AND CAR MEMES," an informational automotive blog featuring articles, videos, mechanic how-to material, vehicle restorations, DIY projects, and tool recommendations; its apparent business model is content publishing supported potentially by advertising, affiliate activity, or organic traffic rather than direct financial services.

Scam/Impersonation Risk

No brand impersonation, phishing form, credential prompt, or conflicting legal identity was observed in the supplied site content. However, the benign automotive presentation is materially outweighed by external reputation evidence showing multiple malicious detections and a confirmed blacklist status. This creates a clear risk for sensitive interactions, even though the homepage itself contains no financial offer or login mechanism. The domain's historical continuity is a positive provenance signal, but it does not neutralize the external threat findings.

EVIDENCE

- Homepage: Presents automotive articles and videos and contains no visible login, credential-collection, financial-offer, or sensitive form functionality.
- External reputation assessment: Confirmed blacklist status with multiple malicious detections and one additional suspicious detection.
- Domain registration: Registered 2019-06-02 with Çizgi Telekomünikasyon A.Ş.; age 7.22 years.
- Web archive: 41 snapshots spanning 2019–2026, with 8 years tracked.

Regulatory Verification Notes

The site appears informational rather than a regulated financial service, and no licensing claim, registration number, or clearly identified operating entity is established in the supplied content. Operator identity therefore remains unverified and the site's governance disclosure is unclear; this is a transparency and verification issue, not proof of fraud. The available third-party broker context contains no match, so it provides neither a regulatory endorsement nor an adverse broker-specific finding. Transport security and identifiable hosting are present, but they establish technical operation rather than legal legitimacy.

EVIDENCE

- Hosting infrastructure: Served from AS16276, operated by OVH - OVH SAS, France.
- Transport encryption: TLS certificate issued by YR1 at DV validation level, valid to 2026-11-18 09:25 UTC.
- Homepage and navigation: Identify the publication as "MECHANIC AND CAR MEMES" but do not establish a legal operator, license authority, or registration number.

What to Verify Next

Before any sensitive interaction, an institution should independently identify the operator through a reliable offline or authoritative channel and confirm that any commercial, advertising, affiliate, or partnership claims are attributable to that entity. If the site is used for a transaction, licensing or business-registration status should be checked with the relevant jurisdictional registry, and payment protections should be confirmed before funds or credentials are involved. Contact routes should also be validated independently rather than relying solely on links presented by the site.

EVIDENCE

- Identity status: No independent connection between the website and a verified real-world operator is established.
- Regulatory disclosure: The supplied page content does not provide a licensing authority or registration number to validate.
- Interaction surface: The assessed homepage contains no sensitive form, login form, wallet connection, or external password form.

Summary Verdict

The overall posture is **moderate trust with elevated sensitive-interaction risk**. The site appears to function as a benign automotive publication, but the unresolved external reputation contradiction and unverified operator identity prevent it from being treated as an established, fully trusted entity.

Infrastructure Integrity

The site is protected by a CDN/WAF arrangement, and the observed address is an edge address rather than an independently observable origin server. This reduces direct origin exposure and is a mitigating technical control, but CDN/WAF protection alone is not evidence of legitimate ownership or safe sensitive use.

Closing Assessment

Passive viewing is the proportionate use case pending independent identity and reputation confirmation; credentials, payments, or other sensitive actions should not be undertaken until those checks are complete.

Written analysis generated 2026-08-22 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox.

- 01 Governance Risk

 - The public registration record for this domain is incomplete.
Registration and ownership rule:KF_WHOIS_INCOMPLETE
- 02 Sensitive Interaction Risk

 - The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
 - A large share of what the page loaded came from other domains.
Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_MODERATE

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of mechanicusa.org.

- The request stayed on mechanicusa.org. It was not redirected to another domain. CLEAR

- Registration is published under Çizgi Telekomunikasyon A.Ş.. CLEAR
- DNS for this domain is served by guzelhosting.com, across 4 name servers. NOTED
- The registration is paid up to 2027-06-02. NOTED
- The earliest public archive of this site is from 2019-12-05. CLEAR
- It is hosted on OVH, from a server in FR. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about mechanicusa.org at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
