

Is mediaset.es legit? TrustSniffer's high-trust assessment: 92/100

mediaset.es

Verdict

92

OUT OF 100

HIGH TRUST

mediaset.es appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 55%.

What this site appears to be

Mediaset corporate page describing cookie usage, data processing and advertising/partner relationships. Provides links to corporate services, press, and advertising offerings; no login or financial solicitations present.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

Mediaset is a corporate media and publishing website presenting television and news brands, corporate information, press resources, advertising services, commercial partnerships, content distribution, and subscription offerings for some products. Its apparent business model is media publishing supported primarily by advertising and related commercial services rather than financial solicitation.

Scam/Impersonation Risk

No phishing, impersonation, blacklist, or other contradictory signals were observed. The homepage presents coherent Mediaset corporate content, including cookie, privacy, advertising, press, and television-related material, with no login form, wallet connection, financial solicitation, or sensitive-data form detected. An automated brand-similarity signal associated some page characteristics with “media.net,” but the observed Mediaset content, absence of phishing indicators, and clean external reputation do not corroborate an impersonation scenario. External network activity was also flagged as partly non-whitelisted; this is consistent with the site’s stated advertising and partner relationships and was not accompanied by hidden forms, credential capture, wallet activity, or cloaking.

EVIDENCE

- The homepage is classified as corporate/informational and records no login form, hidden form, sensitive form, or financial solicitation.
- External reputation checks recorded 0 malicious and 0 suspicious detections, with no confirmed blacklist or phishing result.
- The homepage returned HTTP 200 during two successful behavioral runs; wallet-drainer runs, wallet-provider detection, clipboard capture, and password-external-form activity were all 0.
- The site’s public traffic footprint is within the global top one million, supporting an established public presence.

Regulatory Verification Notes

The available content is consistent with a media publisher rather than a regulated financial provider. Its corporate and cookie-related material explains data processing, advertising, partner relationships, consent preferences, and withdrawal or objection mechanisms. No financial license or registration number is claimed in the analyzed content; this is a disclosure point for ordinary corporate verification, not evidence of scam activity. The operator identity remains independently unverified, so the site’s Mediaset presentation should be treated as

apparent corporate identity rather than independently proven legal ownership. A separate third-party broker screening produced no match, which is contextual reputation information and not a licensing determination.

EVIDENCE

- The cookie-information page describes storage and processing of browsing data, personalized advertising, audience measurement, and sharing with commercial partners.
- The corporate content provides links to press, advertising, corporate services, and named television and news properties.
- The site's hosting infrastructure resolved to AS16509, AMAZON-02 — Amazon.com, Inc., United States.
- The transport certificate is DV, issued by Amazon RSA 2048 M04, and valid through 2026-12-05.

What to Verify Next

Before credential or payment interactions associated with any subscription or commercial service, independently match the operating legal entity and official contact channels against authoritative corporate information. Review the applicable terms, cancellation and refund conditions, and payment-protection options before committing funds. For data-processing decisions, confirm that cookie preferences and consent withdrawal function as described on the site.

EVIDENCE

- The analyzed content describes subscription services for some products but does not establish the independently verified legal operator.
- The cookie notice provides a preference-management mechanism and describes consent withdrawal or objection options.
- The corporate page links advertising and partner services, making independent confirmation of the relevant contracting entity appropriate for commercial engagements.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate corporate website and supports a high-trust, low-risk posture. No contradictions were observed, although the real-world operator identity is not independently verified.

Infrastructure Integrity

The site is protected by AWS CDN/WAF infrastructure, and all observed addresses were AWS edge servers rather than an exposed origin. This provides a meaningful reduction in direct origin exposure and is a mitigating infrastructure signal, but it does not independently establish corporate ownership or legitimacy.

Closing Assessment

Routine browsing is proportionate to the current assessment; before submitting credentials or making payments, ordinary independent checks of the merchant identity, applicable terms, and payment protections should be completed.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of mediaset.es.

- The request stayed on mediaset.es. It was not redirected to another domain. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about mediaset.es at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
