Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2017.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

The website is the online presence of Medusa Restaurant in Mandrakia, Milos, Greece, presenting local dining, menu and gallery information, opening hours, location details, and telephone or email-based reservation arrangements for an in-person food and beverage business.

Scam/Impersonation Risk

The site presents as a local restaurant and the page-level review found no apparent brand-impersonation indicators, phishing forms, hidden forms, wallet activity, or suspicious browser behavior. However, this benign presentation is materially contradicted by external reputation evidence: six malicious and one suspicious detections were recorded, alongside a confirmed blacklist hit from multiple external sources. The resulting risk is concentrated on sensitive interactions, and the apparently ordinary restaurant content should not be treated as sufficient evidence that the website is safe for credential submission, financial transactions, or other sensitive use.

EVIDENCE

- External reputation telemetry recorded 6 malicious detections and 1 suspicious detection among 7 evaluated results, with a confirmed blacklist hit.
- Domain continuity indicates an age of approximately 9.15 years; the earliest recorded historical date is 2017-06-26.
- Historical coverage is recorded from 2017-06-26 through 2026-06-11, representing 10 years tracked.

Regulatory Verification Notes

The homepage and contact material identify “Medusa Restaurant” in Mandrakia, Milos, provide a Greek location and telephone contact, and describe the business as a restaurant established since 1999. The available material does not independently verify the legal operator, and no licensing or registration number is presented; for a restaurant, this is a disclosure and verification gap rather than proof of wrongdoing. The site’s transport security is technically present, but domain-validated encryption confirms channel protection only and does not establish the operator’s identity or regulatory standing.

EVIDENCE

- The homepage identifies the business as Medusa Restaurant in Mandrakia, Milos, Greece, and describes its local dining service.
- The site does not state a legal entity name or provide a licensing or registration number in the reviewed business content.
- The site is hosted by IMH-IAD - InMotion Hosting, Inc., US, on AS54641.
- The TLS certificate is issued by YR2, uses DV validation, and is valid to 2026-10-09T13:02:51+00:00.

What to Verify Next

Before any sensitive interaction, an independent offline source should confirm that the restaurant’s published contact details and reservation arrangements correspond to the physical business in Mandrakia. Any applicable Greek business, food-service, or tourism registration should be checked through the relevant official registry, and payment requests should be limited to methods offering transaction dispute protection. The site should be treated as informational until those checks are complete.

EVIDENCE

- Interaction testing found no login form, password form, wallet connection, or other sensitive submission mechanism.
- The reviewed site operates as an informational restaurant presence, with no observed online payment workflow.
- The homepage content provides a physical business location that can be independently corroborated.

Summary Verdict

The overall posture is **critical trust risk**. Although the website’s visible content is consistent with a genuine local restaurant, the confirmed external reputation contradictions and unverified operator identity prevent a reliable legitimacy conclusion for sensitive engagement.

Infrastructure Integrity

The site resolves directly to a single likely origin hosted by InMotion Hosting in the United States, with no detected CDN or WAF layer. This provides a straightforward hosting path but no meaningful protective infrastructure signal capable of offsetting the external reputation findings.

Closing Assessment

Prospective users should restrict activity to non-sensitive inspection unless the business identity, applicable registration, and contact channels have been independently confirmed; credentials, financial details, and other sensitive information should not be submitted on the basis of the website alone.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

1 finding contributed to this verdict, raised by analysis engine, external reputation.

01 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.

External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of medusamilos.gr.

- The request stayed on medusamilos.gr. It was not redirected to another domain. CLEAR
- The earliest public archive of this site is from 2017-06-26. CLEAR
- It is hosted on IMH-IAD, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about medusamilos.gr at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
