Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

Megasoft is a corporate website for a long-established Russian IT company that develops enterprise software, information systems, communication systems, and marketplace platforms for business clients, supported by company news, projects, products, careers, and contact information.

Scam/Impersonation Risk

No phishing, impersonation, blacklist, or conflicting-identity indicators were observed. The homepage presents a coherent B2B technology-services model involving enterprise systems and marketplaces for financial, industrial, agricultural, and trading clients, rather than a deceptive consumer-payment funnel. The site also showed no login form, sensitive data-collection form, wallet interaction, suspicious script behavior, or external posting activity during inspection. Available reputation checks were clean, supporting a low apparent scam and impersonation risk; however, the real-world operator identity remains independently unverified.

EVIDENCE

- The homepage identifies “Meracoфт” and describes information systems, trading marketplaces, products, projects, news, careers, and contacts.
- The domain was registered on 1997-10-20 and is 28.83 years old.
- External malware and phishing checks recorded 0 malicious and 0 suspicious detections; the domain’s traffic rank was 24005 and it was within the top 1 million.
- The captured homepage contained no login form, sensitive form, hidden form, wallet connection, or suspicious inline script.

Regulatory Verification Notes

The site describes itself as an accredited IT company of the Russian Ministry of Digital Development, Communications and Mass Media and displays registration number 26787. This is a substantive on-site disclosure, but the accreditation and the legal entity behind the website were not independently verified in the supplied evidence. The available content presents an enterprise technology vendor rather than a financial-services provider, making corporate identity and accreditation confirmation the relevant verification topics. No adverse broker-reputation association was identified, although that contextual signal is not a licensing or regulatory determination.

EVIDENCE

- The Company content states that Megasoft is an accredited IT company of the Russian Ministry of Digital Development, Communications and Mass Media, registration number 26787.
- The site is served from AS12695, DINET-AS - LLC Digital Network, RU.
- TLS uses issuer YE1 with DV validation and is valid to 2026-10-08T21:12:37+00:00.
- The site's stated business model is B2B software development, enterprise information systems, and marketplace services delivered through contracts and ongoing support.

What to Verify Next

Before credential or payment interactions, independently confirm the company's legal identity and the accreditation reference through the relevant official registry or an offline institutional contact. For any commercial engagement, obtain and review the contracting entity, terms, service commitments, applicable return or cancellation provisions, and payment-protection arrangements. Published contact channels should also be cross-checked against independently sourced corporate records.

EVIDENCE

- The website provides separate Company, Contacts, Careers, Projects, Products, and News sections that can be used to compare operational and corporate information.
- An English-language option is available alongside the Russian site navigation.
- The site presents ongoing news and project information rather than a single-purpose landing page.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate corporate website and supports a high-trust, low-risk posture for ordinary browsing and business interaction. The conclusion is strong at the website-risk level, while the identity of the real-world operator remains not independently verified.

Infrastructure Integrity

The site resolves directly to a single hosting address, 79.137.235.46, on infrastructure in Russia, with no CDN detected. This provides less intermediary shielding than a CDN-fronted deployment, but the resolved hosting configuration did not produce a confirmed security contradiction; valid transport encryption remains a mitigating technical control.

Closing Assessment

Proceed with ordinary independent corporate-identity, contractual, and payment-protection checks before submitting credentials or completing a payment, particularly for a material commercial engagement.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of megasoft.ru.

- The request stayed on megasoft.ru. It was not redirected to another domain. CLEAR
- Registration is published under RU-CENTER-RU. CLEAR
- DNS for this domain is served by 235.41, across 3 name servers. NOTED
- The registration is paid up to 2026-11-30. NOTED
- It is hosted on DINET-AS, from a server in RU. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about megasoft.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
