What megatasktechnologies.com served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2021.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

Megatask Technologies is a New Delhi-based digital services agency presenting web and app development, PPC management, UI/UX design, SEO, and cloud/DevOps services for business clients through project-based and retained engagements.

Scam/Impersonation Risk

The site presents a coherent corporate-agency profile rather than a financial solicitation, and the supplied page analysis found no brand-impersonation indicators, login form, hidden form, wallet activity, or other page-level phishing mechanics. However, this benign presentation is outweighed by confirmed blacklisting and corroborated external threat detections, including malicious and suspicious classifications from reputation sources. The real-world operator remains unverified, so the professional appearance of the homepage should not be treated as proof of identity. No conflicting legal identities were observed, but the confirmed blacklist status creates a material risk for sensitive interactions.

EVIDENCE

- The homepage describes Megatask Technologies as a “Trusted Development Studio” in Delhi, India, offering web, app, PPC, UI/UX, SEO, and cloud/DevOps services.
- The historical record contains 74 archive snapshots spanning 2021–2026, while the domain registration record dates creation to 2020-07-17 and records an age of 6.1 years.
- External reputation checks recorded 9 malicious and 2 suspicious detections, with the domain present on 2 blacklist sources.

Regulatory Verification Notes

The available pages describe fee-based digital services, portfolio work, testimonials, a process, FAQs, and a contact route. They do not present a license, registration number, or clearly independently verifiable legal-entity disclosure in the supplied material; for this type of agency, that is a transparency and contracting-identity gap rather than a standalone finding of fraud. The site’s page authority is mid-range and offers limited corroboration of external standing. The transport layer is valid, but a domain-validated certificate establishes encrypted communication, not regulatory status or operator identity.

EVIDENCE

- The homepage and service pages identify the business as a digital studio and list React, Next.js, mobile applications, Google Ads, Meta campaigns, SEO, and cloud infrastructure services.
- The supplied site content includes About, Portfolio, Process, FAQ, and Contact areas but no stated license authority or registration number.
- The site’s TLS certificate is issued by YR1, uses DV validation, and is valid to 2026-11-03.

What to Verify Next

Before any contractual, credential, or payment interaction, an organization should independently confirm the legal contracting entity, its registration, and the authority of the person communicating on its behalf. Portfolio references and testimonials should be validated through independently sourced client contacts, and any proposed payment should use a protected commercial method with a written scope, refund terms, and dispute route. Official contact channels should also be confirmed through an independent, offline route rather than relying solely on the website form.

EVIDENCE

- The homepage claims 149+ projects delivered, 97% client satisfaction, and 12+ years of experience; these claims require independent corroboration.
- The site exposes one contact form and no sensitive form, login form, or password-submission flow.
- The supplied page analysis found no external social-domain presence or structured business markup to provide additional identity corroboration.

Summary Verdict

The overall posture is **critical trust risk** because strong external threat and blacklist signals override the site’s otherwise coherent agency presentation and valid technical setup. Legitimacy is therefore unconfirmed, and

sensitive interaction should not be treated as appropriate on the basis of the website content alone.

Infrastructure Integrity

The website is served through GoDaddy infrastructure and protected by a CDN/WAF layer, which provides a mitigating layer against direct exposure of the origin and reduces some infrastructure-level attack surface. This protection does not establish that the operator is legitimate and does not offset the external reputation findings.

EVIDENCE

- The observed edge address is 184.168.100.162 on AS26496, operated by AS-26496-GO-DADDY-COM-LLC - GoDaddy.com, LLC, US.
- CDN/WAF protection was detected, with 1 observed edge IP and 0 likely origin candidates.

Closing Assessment

Until independent identity and business validation are complete, activity should be limited to passive review, with credentials and financial interactions withheld.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox, external reputation.

01 Governance Risk

- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE
- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- The page sent data to a destination TrustSniffer does not recognise.
Behaviour in a sandbox rule:BEHAV_NONWHITELISTED_POSTS
- A large share of what the page loaded came from other domains.
Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_MODERATE
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of megatasktechnologies.com.

- The request stayed on megatasktechnologies.com. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by domaincontrol.com, across 2 name servers. NOTED
- The registration is paid up to 2027-07-17. NOTED
- The earliest public archive of this site is from 2021-05-31. CLEAR
- It is hosted on AS-26496-GO-DADDY-COM-LLC, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about megatasktechnologies.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals

were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
