

Is meteorrejects.net a scam? TrustSniffer's high-risk assessment: 2/100

meteorrejects.net

Verdict

2

OUT OF 100

CRITICAL RISK

meteorrejects.net shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-09-19 by automated analysis. Classification confidence 55%.

What this site appears to be

A Cloudflare-hosted error page (Error 1000) indicating the domain meteorrejects.net resolves to a prohibited IP. The page provides guidance to the site owner and a link to Cloudflare troubleshooting documentation.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

DNS points to prohibited IP

What meteorrejects.net served when TrustSniffer captured it on 2026-09-19. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Security Alert

Fortinet flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website currently presents only an automated Cloudflare Error 1000 interstitial for meteorrejects.net, stating that the domain resolves to a prohibited IP address; it does not display a business service, commercial offer, customer account area, or monetized operating model.

Scam/Impersonation Risk

The site has a critical risk posture for sensitive interaction. Multiple external reputation sources recorded malicious or suspicious detections, and the domain is confirmed as blacklisted; these signals outweigh the fact that the captured page itself contains no deceptive copy, forms, wallet functionality, or visible impersonation content. Abuse reporting is attributed to shared provider infrastructure rather than specifically to the website, so it is contextual rather than conclusive evidence about site ownership or intent. The available evidence does not establish a legitimate operator identity, and the page provides no usable basis for treating the domain as safe for credentials, account access, or financial activity.

EVIDENCE

- The homepage displays a Cloudflare Error 1000 message stating “DNS points to prohibited IP” rather than a functioning business or service page.
- External reputation assessment recorded 3 malicious detections and 1 suspicious detection for the domain, with a confirmed blacklist result from multiple sources.
- The shared provider address associated with the delivery infrastructure has 81 abuse reports; the attribution identifies shared infrastructure, not a confirmed site-specific origin.
- The domain was registered on 2026-05-24 and is approximately 0.32 years old.

Regulatory Verification Notes

No legal, licensing, registration, ownership, terms, or regulated-service disclosures are presented in the captured page. This is a transparency and verification gap, not by itself proof of fraud; however, because the page is only an infrastructure error interstitial, there is no substantive business information from which regulatory status or the operator’s real-world identity can be independently assessed. The site should therefore not be treated as a regulated or accountable financial service on the evidence available.

EVIDENCE

- The homepage contains only automated Cloudflare troubleshooting text and no company name, legal entity, license claim, registration number, or governing terms.
- The captured page identifies itself as an error/interstitial page and states that it does not provide a service interface.
- No independently verified regulated status is established in the supplied evidence.

What to Verify Next

Any proposed engagement should first be suspended pending independent confirmation of the domain’s operator through a trusted, offline or previously established channel. A prospective institution should confirm any claimed license directly with the relevant regulator, obtain legal-entity and ownership documentation outside the site, and require contractual, payment-protection, and incident-response information before considering access or funds. Credentials, authentication tokens, and financial transactions should not be submitted while those checks remain incomplete.

EVIDENCE

- The homepage provides no functioning contact, legal, or service pathway through which an operator can be validated.
- The page’s stated DNS conflict prevents normal assessment of the underlying site content.
- External malicious detections and the confirmed blacklist status require independent validation before any sensitive interaction.

Summary Verdict

The overall posture is **critical risk**, with the site unsuitable for sensitive interaction on the available evidence. Its apparent legitimacy and real-world operator identity remain unverified, while the external threat indicators

provide a materially stronger basis for caution than the neutral appearance of the error page.

Infrastructure Integrity

The website is delivered through Cloudflare’s CDN/WAF, which is a mitigating protective control but does not establish legitimacy. The observed address is an edge endpoint, and the origin server was not observable in this analysis; this limits independent hosting verification and may allow infrastructure or content changes to be concealed behind the delivery layer.

EVIDENCE

- Served on AS13335, CLOUDFLARENET — Cloudflare, Inc., US; observed edge IP: 185.158.133.1.
- TLS certificate issued by YE1 using DV validation, valid to 2026-10-21.
- Infrastructure facts identify Cloudflare CDN/WAF protection, one observed edge address, and zero observed origin candidates.

Closing Assessment

The appropriate institutional action is to refrain from login, credential submission, or financial engagement unless independent operator, regulatory, and security validation produces materially stronger evidence.

Written analysis generated 2026-09-19 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine.

01 Governance Risk

- The registration record withholds contact details for the operator.

Registration and ownership rule:KF_WHOIS_HIDDEN
- The public registration record for this domain is incomplete.

Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Analysis engine signal:direct_threat

Signals weighed against the site

- AbuseIPDB: 81 reports on hosting IP 185.158.133.1 (Internet Utilities Europe and Asia Limited, Content Delivery Network), 45% confidence. The reports are attributed to shared infrastructure, not specifically to this website.

Identity verification

Status	UNVERIFIED
Identity score	30/100

Identity verification confidence	25%
----------------------------------	-----

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of meteorrejects.net.

- The request stayed on meteorrejects.net. It was not redirected to another domain. CLEAR
- Registration is published under Cloudflare, Inc.. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-05-24. NOTED
- It is hosted on CLOUDFLARENET, from a server in AE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about meteorrejects.net at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
