

Is mir24.tv legit? TrustSniffer's high-trust assessment: 90/100

mir24.tv

Verdict

90
OUT OF 100

HIGH TRUST

mir24.tv appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 75%.

What this site appears to be

Editorial news portal (MIP 24) publishing Russian and international news, videos, weather and program schedules. Contact and legal registration details for the broadcasting company are present in the footer.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

- Public web-archive history exists since 2011.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

mir24.tv is an editorial news and broadcast portal presenting Russian and international news, video content, weather information, television schedules, films, series, and live programming. Its apparent business model is advertising- and media-partnership-supported publishing affiliated with the MIR 24 broadcasting operation.

Scam/Impersonation Risk

No phishing, malware, blacklist, or impersonation contradictions were observed. The homepage presents a coherent editorial media service with news categories, video, live programming, and broadcast schedules rather than a transaction-oriented or credential-harvesting workflow; no login or sensitive-data form was detected. A name-similarity signal involving mi.com was not corroborated by the observed content, which consistently identifies the service as MIR 24. The domain also has a long, continuous public history and a strong established traffic footprint, supporting an evidence-consistent low-risk interpretation.

EVIDENCE

- Homepage: Russian and international news, video, weather, live broadcasting, and programme information are presented across a structured editorial portal.
- Homepage interaction review: no login form, hidden form, password-external form, wallet connection, or clipboard-hijacking behavior was detected.
- External reputation checks: zero malicious and zero suspicious findings were recorded, with no blacklist or phishing hit.
- Domain registration and archive history: registered 2010-06-04 (~16.19 years old); 4,179 archive snapshots spanning 2011-01-12 to 2026-07-18, covering 16 years tracked.

Regulatory Verification Notes

The site is a media publisher rather than a financial-service offering, and its footer includes contact and legal registration details for the broadcasting company. No financial or other regulated-service licence is claimed in the supplied page evidence, so the relevant consideration is disclosure completeness rather than a fraud indicator. The registrar is a recognized regional domain-registration provider, and the transport layer uses a valid, known-issuer domain-validated certificate. The real-world operator identity remains independently unverified, so the on-site corporate attribution should be treated as an apparent identity rather than independently proven.

EVIDENCE

- Footer: contact and legal registration details for the broadcasting company are present.
- Domain registration: registrar recorded as Regional Network Information Center, JSC dba RU-CENTER; organization recorded as ITRC MIR.
- Site transport encryption: TLS certificate issued by GlobalSign GCC R3 DV TLS CA 2020, validation level DV, valid to 2026-12-02.

What to Verify Next

Before any unexpected credential or payment interaction associated with the site, confirm that the requesting service is genuinely connected to the MIR 24 media operation and independently check the applicable corporate or broadcasting registration details. Confirm official support and contact channels through an independently sourced route, and apply ordinary payment-protection and return-policy checks if a commercial transaction is introduced.

EVIDENCE

- Footer: the site provides contact and legal registration information that can be compared with independently sourced corporate records.
- Homepage: the observed service is editorial and contains no sensitive-data submission form.
- Site navigation: company, history, management, press, careers, advertising, and feedback areas are exposed as distinct sections.

Summary Verdict

The overall posture is **high trust and low risk**, and the available evidence is consistent with an established, apparently legitimate website. This supports ordinary browsing and routine use, while the absence of independent operator-identity verification prevents treating the real-world affiliation as conclusively proven.

Infrastructure Integrity

The site resolves through a single likely origin address rather than a detected CDN or WAF edge, and is hosted on AS56631, ONLANTA-NET — Onlanta Ltd., RU, in Russia. The infrastructure is identifiable and stable, although it does not provide the additional exposure-mitigation associated with mainstream CDN/WAF deployment; this is an infrastructure characteristic, not evidence of illegitimacy.

Closing Assessment

Routine editorial use is proportionate to the assessed posture; if credentials or payment details are requested in a future interaction, ordinary independent merchant-identity, return-policy, and payment-protection checks should precede submission.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	55/100
Identity verification confidence	30%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of mir24.tv.

- The request stayed on mir24.tv. It was not redirected to another domain. [CLEAR](#)
- Registration is published under Regional Network Information Center, JSC dba RU-CENTER. [CLEAR](#)
- DNS for this domain is served by onlanta.com, across 4 name servers. [NOTED](#)
- The registration is paid up to 2027-06-04. [NOTED](#)
- The earliest public archive of this site is from 2011-01-12. [CLEAR](#)
- It is hosted on ONLANTA-NET, from a server in RU. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about mir24.tv at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
