Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

Misset Horeca is an established Dutch trade publication for hospitality professionals, presenting industry news, operational guidance, interviews, recipes, venue inspiration, job content, a digital magazine, and an AI-assisted question service. Its commercial model combines paid subscriptions and trial membership with advertising, sponsored material, newsletter registration, and reader accounts.

Scam/Impersonation Risk

No identity contradictions, impersonation indicators, phishing behavior, or other fraud signals were observed. The site's long-established domain, stable trade-publication content, significant traffic footprint, and clean external reputation converge strongly with its stated identity and business purpose. Interactive testing identified neither credential redirection nor concealed or wallet-related behavior.

- The domain registration record shows registration on 6 January 2000 (~26.58 years old) through Realtime Register.
- The homepage presents coherent, industry-specific editorial coverage under the Misset Horeca identity and describes operation within VMN media.
- External reputation checks recorded 0 malicious and 0 suspicious classifications, no search-engine safety warning, no reported abuse, and a global traffic rank of 340,951.
- Homepage behavior showed no brand impersonation, cloaking, hidden forms, external password forms, suspicious inline scripts, or clipboard and wallet manipulation.

Regulatory Verification Notes

The website functions as a professional media publication rather than a broker, investment platform, payment service, or other regulated financial provider. No financial-license claim is made, and none is inherently expected for the described publishing model. The available homepage material identifies VMN media as the operator, while its consent interface expressly describes marketing, personalized advertising, audience measurement, precise geolocation, and device-identification processing; these disclosures are relevant to privacy and advertising compliance rather than legitimacy concerns.

- The homepage identifies the service as hospitality-industry news and professional information operated within VMN media.
- The homepage distinguishes subscriptions, sponsored partner content, advertising, accounts, and newsletter acquisition as its commercial and readership channels.

- The hosting infrastructure is served from AS16509 (AMAZON-02 — Amazon.com, Inc., US).
- The site’s transport encryption uses an Amazon RSA 2048 M01 domain-validated certificate, valid to 31 January 2027.

What to Verify Next

Prospective subscribers should review the applicable trial-conversion, renewal, cancellation, and payment terms before purchasing a membership. Organizations using the publication for procurement or research should distinguish editorial reporting from sponsored partner material. Privacy-sensitive users should review the consent settings and relevant policy before choosing whether to permit optional advertising, geolocation, or device-identification processing; official subscription and account communications should also be matched to channels published within the site.

- The homepage promotes a free trial and paid membership, making the associated commercial terms relevant before subscription.
- Sponsored professional content appears alongside the site’s broader editorial offering.
- The consent interface provides “Accept all,” “Reject all,” and further-information controls and states that consent or legitimate-interest objections can be revisited.
- The sole detected homepage form is a newsletter email signup with no sensitive fields or untrusted submission destination.

Summary Verdict

The site presents as a legitimate, established, and trustworthy professional publication. Its identity, content, reputation, technical operation, and observed behavior are mutually consistent, with no contradictory risk signals. Normal interaction, including account login, subscription activity, and standard use, is appropriate.

Infrastructure Integrity

The deployment uses an AWS CDN/WAF, and all three observed addresses were AWS edge servers rather than exposed origin candidates. This architecture reduces direct origin exposure and provides a credible infrastructure-security mitigation, although protective infrastructure is not independently treated as proof of legitimacy.

Closing Assessment

Prospective users may engage normally, applying routine commercial and privacy review when opening an account, selecting consent preferences, or purchasing a subscription.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of missethoreca.nl.

- The request stayed on missethoreca.nl. It was not redirected to another domain. CLEAR
- Registration is published under Realtime Register. CLEAR
- DNS for this domain is served by co.uk, across 3 name servers. NOTED
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about missethoreca.nl at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
