

Is mixhost.jp legit? TrustSniffer's high-trust assessment: 90/100

mixhost.jp

Verdict

90

OUT OF 100

HIGH TRUST

mixhost.jp appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 75%.

What this site appears to be

Commercial hosting provider product page (mixhost) describing WordPress-focused hosting plans, pricing, migration services, security, backups, and promotional discounts. The page contains typical marketing, plan comparisons, and support links.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2016.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

This website is the commercial mixhost hosting service, presenting rental servers, cloud hosting, WordPress-optimized plans, migration and security services, domain-related products, and subscription pricing for individuals, businesses, and monetized websites.

Scam/Impersonation Risk

No contradictions were observed. The site's business presentation is coherent with a commercial hosting provider, and the available page analysis identified no phishing, brand-impersonation, malicious content, or other fraud indicators. External reputation checks were clean, while the domain shows sustained historical continuity rather than signs of suspicious repurposing. The available evidence therefore supports an apparently legitimate, established website, although it does not independently verify the real-world operator's identity.

EVIDENCE

- Registration continuity dates to 2016, with an age of 9.765913757700206 years.
- The site has 374 archive snapshots spanning 2016–2026, covering 11 tracked years.
- The homepage was categorized as a commercial hosting-service product page with no detected red flags or suspected brand impersonation.
- External reputation checks recorded 0 malicious and 0 suspicious detections, with no confirmed phishing or blacklist finding.

Regulatory Verification Notes

The homepage describes a conventional subscription hosting business offering rental servers, cloud servers, WordPress plans, migration, performance, security, SSL-enablement, backup-related services, domains, and associated products. It advertises introductory pricing, promotional discounts, and a 30-day refund guarantee. No licensing or registration number is evidenced in the available page material; for a hosting service this is a disclosure and merchant-identity verification point rather than evidence of fraud. The operator's real-world identity remains independently unverified. A third-party broker-reputation dataset returned no match, but that is contextual information and not a legal, licensing, or regulatory determination.

EVIDENCE

- The homepage identifies the business model as recurring-fee web hosting with paid add-on services and presents plan comparisons and support links.
- The site is served from AS13335, operated by CLOUDFLARENET — Cloudflare, Inc., US.
- The transport certificate is issued by WE1, uses DV validation, and is valid to 2026-10-12T16:38:50+00:00.
- The available page material contains commercial terms and refund-related marketing, but no licensing or registration number.

What to Verify Next

Before credential or payment interactions, an interested party should independently confirm the legal merchant name, applicable contracting entity, refund conditions, and payment-protection arrangements through the site's terms, checkout, and support materials. Where the service is being procured for regulated or business-critical use, the relevant corporate registry and any jurisdiction-specific consumer or hosting requirements should also be checked. Contact channels should be confirmed through an independently sourced official route before sensitive account matters are discussed.

EVIDENCE

- Homepage: reconcile the advertised plans, pricing, promotional conditions, and refund guarantee with the final order terms.
- Terms and billing pages: confirm the contracting entity, renewal charges, cancellation process, and refund exclusions.
- Contact and support pages: validate the published support routes through an independent official reference.
- Business procurement records: retain the merchant identity and payment-protection details before committing to a paid subscription.

Summary Verdict

The overall posture is **high trust and low risk**, and the available evidence is consistent with an established, apparently legitimate website. No scam, phishing, impersonation, or identity-conflict indicators were observed, but the operator's real-world identity is not independently verified.

Infrastructure Integrity

Cloudflare CDN and WAF protection provide a meaningful defensive layer by placing the service behind managed edge infrastructure and reducing direct exposure of the underlying host. This is a mitigating technical control, not proof of business legitimacy.

EVIDENCE

- Four observed addresses were identified as Cloudflare edge endpoints; no origin-server candidates were identified.
- The infrastructure provider is Cloudflare, Inc., US, using AS13335 and the ARIN registry.
- The site's transport encryption uses a valid WE1-issued DV certificate.

Closing Assessment

Ordinary browsing and standard service evaluation are proportionate to the assessed posture; before submitting credentials or payment details, independent merchant-identity, contractual, refund, and payment-protection checks should be completed.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of mixhost.jp.

- The request stayed on mixhost.jp. It was not redirected to another domain. CLEAR
- The earliest public archive of this site is from 2016-11-04. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about mixhost.jp at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
