The page as captured

https://mkconstructions.net/

What mkconstructions.net served when TrustSniffer captured it on 2026-09-22. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- Public web-archive history exists since 2010.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website presents MK Constructions as a local road and civil-construction contractor serving Coimbatore and other locations in Tamil Nadu, offering bitumen, concrete, drainage, bridge, paver-block, and related infrastructure works to government and private clients.

Scam/Impersonation Risk

The site's presentation is consistent with a local construction-services business, and no conflicting legal-entity names or direct brand-impersonation indicators were identified in the supplied page analysis. However, this benign presentation is outweighed by confirmed external threat signals: the domain is blacklisted, and multiple security detections classify it as malicious or suspicious. Historical records also show the domain in use from 2010 while the current registration record begins in 2026; that provenance discrepancy requires reconciliation and further weakens confidence in the present operator. Sensitive interaction should therefore be treated as unsafe, notwithstanding the absence of login forms, wallet features, or other overtly interactive abuse mechanisms on the captured pages.

EVIDENCE

- External reputation checks recorded 12 malicious detections and 3 suspicious detections; Fortinet and Sophos were among the flagged providers.
- The domain is listed by external blacklist sources, while Google Safe Browsing recorded no malicious result.
- The registration record identifies creation on 2026-01-07 and an age of approximately 0.71 years.
- Historical records show 106 archive snapshots from 2010-11-06 through 2025-02-23, spanning 16 tracked years.

Regulatory Verification Notes

The homepage and company profile describe MK Constructions, identify Er. M. Kumaran as its leader, claim more than two decades of experience, and refer to operations in Coimbatore, Chennai, and Madurai. The available business content does not provide a license number or identify a licensing authority; this is a regulatory-transparency gap rather than, by itself, proof of fraud. The operator's real-world identity remains unverified, and the external threat findings prevent the business presentation from being treated as sufficient evidence of legitimacy. The supplied third-party broker dataset contains no match.

EVIDENCE

- The About content claims "over 22 years of experience" and names Er. M. Kumaran as the company leader.
- The site lists road, bridge, drainage, concrete, bitumen, paver-block, and consultation services but provides no license authority or license number in the supplied content.
- The site's transport encryption uses a DV certificate issued by YR2, valid through 2026-12-07.
- The domain registration record names GoDaddy.com, LLC as registrar.

What to Verify Next

Before any credential, payment, contractual, or other sensitive engagement, an independent party should confirm the company's legal identity, physical operating presence, project references, and official contact channels through records and contacts obtained outside the website. Any claimed government or private project history should be validated directly with the named client or contracting authority. Licensing or contractor-registration status should be checked with the relevant Tamil Nadu authority where applicable, and endpoint-security controls should be consulted regarding the domain's current reputation before it is accessed from an organizational environment.

EVIDENCE

- The homepage identifies three operating locations—Coimbatore, Chennai, and Madurai—that can support independent business-presence checks.
- The Projects area refers to ongoing and completed projects but the supplied capture does not provide independently verifiable client records.
- Behavioral analysis found no login form, sensitive form, wallet connection, or external password-submission destination.

Summary Verdict

The overall posture is **critical risk** and is not suitable for sensitive interaction. The site has a credible-looking local-business presentation, but confirmed threat and provenance concerns dominate the assessment, while the operator's identity remains unverified.

Infrastructure Integrity

The site resolves directly to infrastructure associated with Unified Layer in the United States, with no CDN detected and multiple likely origin-IP candidates visible. This provides no independent legitimacy assurance and offers less separation between the public website and its hosting origin than a protected edge architecture would provide.

EVIDENCE

- Hosted on AS46606, Unified Layer, US.
- Five unique IPs were observed, with zero edge IPs and five likely origin-IP candidates.
- The site's TLS certificate is DV-validated and issued by YR2, expiring 2026-12-07.

Closing Assessment

Prospective users should limit activity to non-sensitive observation until independent business, licensing, and reputation checks produce consistent results; organizational environments should apply their normal domain-blocking and incident-review procedures.

Written analysis generated 2026-09-22 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

01 Governance Risk

- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of mkconstructions.net.

- The request stayed on mkconstructions.net. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by webhostbox.net, across 2 name servers. NOTED
- The registration is paid up to 2029-01-07. CLEAR
- The earliest public archive of this site is from 2010-11-06. CLEAR
- It is hosted on UNIFIEDLAYER-AS-1, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about mkconstructions.net at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
