

Is moeblog.cn legit? TrustSniffer's high-trust assessment: 87/100

moeblog.cn

Verdict

87

OUT OF 100

HIGH TRUST

moeblog.cn appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-12 by automated analysis. Classification confidence 55%.

What this site appears to be

MoeBlog is a Chinese-language personal technology blog featuring posts about system administration (Proxmox), cloud functions, Android applications, and development notes. Content appears as regular articles and tutorials; no login, payment, or investment flows are present on this page.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

MoeBlog is a Chinese-language personal technology blog presenting tutorials, technical notes, software guides, and practical articles on subjects such as Proxmox administration, cloud functions, Android applications, VPS tools, and development. Its apparent business model is informational publishing, potentially supported by passive monetization such as advertising, affiliate activity, or donations, although no direct monetization flow is present on the reviewed page.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent personal technology-blog format rather than a deceptive financial, credential-harvesting, or impersonation operation; it contains no login form, payment flow, investment solicitation, wallet connection, or sensitive submission mechanism. Observed behavior likewise showed no cloaking, hidden forms, suspicious inline scripts, clipboard manipulation, wallet-drainer activity, or external password forms. The clean external reputation assessment and established registration continuity further support a low scam and impersonation risk posture.

EVIDENCE

- The homepage is categorized as an informational blog and contains regular technical articles, including posts on Proxmox, Aliyun cloud functions, Android applications, and VPS-related tools.
- The homepage contains no sensitive form; behavioral testing recorded zero wallet-connect runs, zero wallet-drainer runs, zero hidden forms, and zero suspicious inline scripts.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, and no confirmed blacklist or phishing hit.

Regulatory Verification Notes

The available material supports an apparently legitimate personal publishing site, but it does not independently verify the real-world operator behind the name “MoeBlog” or the author attribution “MoeWang.” No regulated financial service or licensing claim is evidenced on the reviewed homepage, so the absence of a license number is best treated as a minor disclosure and verification point rather than an indication of misconduct. The site’s registration record names a registrar and registrant, but those records alone do not establish the operator’s legal identity or business affiliation.

EVIDENCE

- Domain registration: 2019-11-09; approximately 6.76 years old; registrar Guangzhou Yunxun Information Technology Co., Ltd. (广州云讯信息科技有限公司).
- Hosted on AS13335 (CLOUDFLARENET - Cloudflare, Inc., US).
- TLS certificate issued by Cloudflare TLS Issuing ECC CA 3 with DV validation, valid to 2026-10-28.
- The homepage navigation includes an “About site” entry, while the available page material does not provide independently verified regulatory or corporate credentials.

What to Verify Next

Before credential or payment interactions are introduced, independently confirm the site operator and official contact channels through a separate, trusted route rather than relying solely on on-site attribution. If the site later accepts donations, sells services, or links to commercial offerings, confirm the merchant identity, applicable return or refund terms, and payment-protection arrangements before proceeding. Software and configuration instructions should also be assessed against the original publisher or repository before installation.

EVIDENCE

- The homepage provides an “About site” route that can be used for operator and purpose confirmation.
- The reviewed page contains no account, payment, or investment workflow requiring immediate transactional verification.
- The site is primarily composed of dated technical notes and tutorials, allowing the legitimacy of individual software recommendations to be checked separately from the website’s overall trust posture.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate, low-risk informational website. The absence of observed contradictions, together with converging content, infrastructure, registration, transport-security, and external-reputation signals, supports a high-trust classification; however, the real-world operator identity remains independently unverified.

Infrastructure Integrity

The website is protected by Cloudflare’s CDN/WAF, and all observed addresses were Cloudflare edge infrastructure on AS13335 rather than identified origin servers. This arrangement mitigates direct exposure of the hosting origin and is a positive defensive signal, but it is not proof of operator legitimacy.

Closing Assessment

Ordinary informational use is proportionate to the assessed posture; any future credential or payment interaction should be preceded by independent merchant-identity, return-policy, and payment-protection checks.

Written analysis generated 2026-08-12 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of moeblog.cn.

- The request stayed on moeblog.cn. It was not redirected to another domain. CLEAR
- Registration is published under 广州云讯信息科技有限公司. CLEAR
- DNS for this domain is served by moeblog.cn, across 4 name servers. NOTED
- The registration is paid up to 2026-11-09. NOTED
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about moeblog.cn at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
