

Is molt.app legit? TrustSniffer's high-trust assessment: 100/100

molt.app

Verdict

100

OUT OF 100

HIGH TRUST

molt.app appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-09-15 by automated analysis. Classification confidence 50%.

What this site appears to be

Marketing landing page for 'Molt' — a health & nutrition operating system that centralizes plans, tracking, and coach integration. Content emphasizes daily plans, habit formation, device sync, and coach management. Legal links (privacy, terms) are visible; no payment flows or investment claims shown.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

molt✱

From goals to results, manage your entire fitness journey in one app

What molt.app served when TrustSniffer captured it on 2026-09-15. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2024.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Molt is a health and nutrition software-as-a-service platform that presents a unified app for daily fitness plans, meal and activity tracking, habit formation, health-device synchronisation, and coach-supported wellness management.

Scam/Impersonation Risk

No contradictions were observed, including no confirmed phishing, impersonation, blacklist, or malicious-content indicators. The homepage presents a coherent SaaS proposition rather than financial, investment, or other abuse-prone services: it describes daily plans, meal logging, habit tracking, coach integration, and smartwatch or tracker synchronisation. Behavioural inspection also found no login form, sensitive form, wallet activity, hidden form, clipboard manipulation, cloaking, or suspicious script activity. An automated similarity signal associated the page with another service, but the page-level assessment did not identify brand impersonation, and the signal does not establish a contradiction.

EVIDENCE

- The homepage describes “Molt - Health & Nutrition OS” and presents features for plans, meals, habits, coaching, devices, and activity tracking.
- The homepage contains no payment flow, investment claim, or sensitive input form; the observed page type is a product landing page.
- The domain registration record shows registration on 2022-07-11 and an age of approximately 4.18 years.

Regulatory Verification Notes

The available material is consistent with a legitimate health and fitness SaaS business model, with privacy and terms links visible on the site. The site does not present itself as a financial or other regulated service, and no licensing representation is shown in the supplied content; this is a disclosure point for ordinary commercial due diligence rather than evidence of a scam. The real-world operator remains independently unverified, so the site’s apparent legitimacy should not be treated as proof of a particular legal entity. Available external reputation checks returned no malicious or suspicious finding, with coverage noted as partial, and no broker-dataset match was identified.

EVIDENCE

- The homepage displays links for privacy and terms and describes software access for clients and coaches.
- The site’s transport encryption uses a DV certificate issued by Amazon RSA 2048 M01, valid through 2026-11-10.
- The hosting record identifies AS16509, Amazon.com, Inc. in the United States.
- No regulated-service or licensing claim is shown in the supplied homepage content.

What to Verify Next

Before credential or payment interactions, an organisation should review the privacy and terms pages for the contracting entity, applicable service conditions, cancellation and refund provisions, and data-handling responsibilities. Independent confirmation of the official support and contact channels is appropriate, together with use of payment methods offering standard dispute protection. Any health-related data permissions should also be reviewed before synchronisation or account activation.

EVIDENCE

- The homepage provides privacy and terms links but the supplied page content does not establish the contracting legal entity.
- The landing page describes device synchronisation and coach integration, making data-permission and service-condition review relevant.
- Behavioural inspection recorded two successful runs with no external posts, external XHR requests, hidden forms, or password-submission destinations.

Summary Verdict

The overall posture is high trust and low risk, and the available evidence is consistent with an established, apparently legitimate website. No contradiction-based scam or impersonation concern was identified. The conclusion supports normal consideration of the service while preserving uncertainty about the independently verified real-world operator.

Infrastructure Integrity

The site is protected by Amazon CloudFront CDN/WAF infrastructure, with observed traffic presented through CDN edge servers rather than a directly exposed origin. This is a meaningful exposure-reduction measure, but it is a mitigating infrastructure characteristic and not proof of operator legitimacy.

Closing Assessment

Standard use may proceed subject to ordinary independent checks of the contracting entity, service terms, contact channels, and payment protections before credentials or payments are submitted.

Written analysis generated 2026-09-15 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of molt.app.

- The request stayed on molt.app. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by awsdns-42.org, across 4 name servers. NOTED
- The registration is paid up to 2027-07-11. NOTED
- The earliest public archive of this site is from 2024-09-29. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about molt.app at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
