

Is mountelizabeth.com.sg legit? TrustSniffer's high-trust assessment: 99/100

mountelizabeth.com.sg

Verdict

99

OUT OF 100

HIGH TRUST

mountelizabeth.com.sg appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-07-31 by automated analysis. Classification confidence 55%.

What this site appears to be

A Mount Elizabeth Hospitals page showing a moved, removed, renamed, or nonexistent-page notice alongside extensive navigation and promotional content for hospital services, doctors, specialties, appointments, medical articles, contact channels, and the MyHealth360 app.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website is the corporate digital presence of Mount Elizabeth Hospitals, presenting specialist care, diagnostics, screening, surgery, hospital admissions, appointment management, billing support, patient information, and access to the MyHealth360 healthcare application as part of the IHH Healthcare network.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, malicious reputation findings, or suspicious browser behaviours were observed. The hospital-focused content is coherent across named facilities, physicians, clinical specialties, patient services, and appointment functions. The long-established domain, organization-validated certificate issued to Parkway Hospitals Singapore Pte Ltd, and clean external threat reputation collectively support the conclusion that this is the legitimate Mount Elizabeth Hospitals website rather than an imitation.

- The domain was registered on 24 June 2002 and is approximately 24.12 years old; its current registration extends to 23 June 2027.
- The assessed page identifies Mount Elizabeth Hospital and Mount Elizabeth Novena Hospital and provides navigation to named clinical centres, medical specialties, physicians, and patient services.
- The page contained no login form, hidden form, externally submitted password form, suspicious inline script, cloaking, clipboard manipulation, cryptocurrency functionality, or wallet interaction.
- External reputation checks recorded 0 malicious and 0 suspicious detections, no malicious safe-browsing finding, no external blacklist finding, and no reported abuse against the observed delivery address.

Regulatory Verification Notes

The reviewed material provides a clear healthcare identity and identifies the certificate-holding organization, but the captured page was a not-found response surrounded by normal site navigation rather than a dedicated legal or licensing page. Consequently, the capture did not establish specific healthcare licence numbers or the responsible regulatory authority. This is a minor disclosure limitation in the reviewed page context, not evidence of illegitimacy or misconduct; third-party broker intelligence is not substantively relevant to this hospital business.

- The site's transport encryption uses an organization-validated certificate issued by Sectigo Public Server Authentication CA OV R36 to Parkway Hospitals Singapore Pte Ltd, valid until 27 October 2026.
- The captured page displayed a notice that the requested content had been moved, removed, renamed, or might not have existed.

- The surrounding navigation referenced hospital admissions, billing and payment, international patient guidance, wards, facilities, appointments, and bill estimation.
- The page offered one newsletter-subscription form, with no sensitive fields or untrusted submission destination detected.

What to Verify Next

For institutional onboarding, the legal name and applicable healthcare licences should be confirmed against the relevant official corporate and healthcare registries. Commercial due diligence should also reconcile the published billing, payment, privacy, and patient-service terms with the contracting entity. Official appointment and support channels should be confirmed through an independently sourced hospital directory when initiating a new relationship.

- The reviewed capture did not expose a dedicated legal or licensing disclosure because the requested page resolved to a not-found notice.
- The site navigation provides distinct billing, payment, appointment-management, and patient-service functions that should be mapped to the contracting workflow.
- Separate contact routes are presented for the Novena and Orchard hospital locations, supporting location-specific channel confirmation.

Summary Verdict

The website is a legitimate, established, and trustworthy healthcare presence with strong convergence between its institutional identity, mature operating footprint, coherent content, and clean security observations. No contradictory risk signals were identified, and normal interaction—including account login and standard use—is appropriate.

Infrastructure Integrity

The website is delivered through Amazon CloudFront, with all four observed addresses operating as CDN edge servers. This mainstream CDN/WAF architecture reduces direct exposure of the application environment and provides a meaningful security mitigation, although infrastructure protection alone is not proof of legitimacy.

- The site is served from AS16509 by AMAZON-02 — Amazon.com, Inc., US.
- Four CloudFront edge addresses were observed: 18.165.122.32, 18.165.122.39, 18.165.122.47, and 18.165.122.80.
- All observed addresses were classified as CDN edge infrastructure.

Closing Assessment

Prospective users may proceed with normal website use and apply ordinary institutional controls for material healthcare engagements, payments, and contracting.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
--------	------------

Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of mountelizabeth.com.sg.

- The request stayed on mountelizabeth.com.sg. It was not redirected to another domain. [CLEAR](#)
- Registration is published under Pacific Internet (S) Pte Ltd. [CLEAR](#)
- DNS for this domain is served by awsdns-17.org, across 4 name servers. [NOTED](#)
- The registration is paid up to 2027-06-23. [NOTED](#)
- It is hosted on AMAZON-02, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about mountelizabeth.com.sg at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that

evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
