

Is nationalbroadband.pk legit? TrustSniffer's high-trust assessment: 90/100

nationalbroadband.pk

Verdict

90

OUT OF 100

HIGH TRUST

nationalbroadband.pk appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 70%.

What this site appears to be

Corporate website for National Broadband (NBB), an ISP powered by CYBERNET. Provides information about network infrastructure, offerings, partner and user signup forms, coverage lookup and FAQs including fair usage policy. Forms collect personal contact information and national ID images as required by regulators.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2016.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

National Broadband (NBB) is a corporate Internet service provider presenting residential and operator broadband services over a buried fiber network, with customer and partner signup, coverage lookup, plan information, FAQs, and support content. The site states that it is powered by CYBERNET and monetizes through broadband subscriptions, dealer or reseller arrangements, and provisioning services.

Scam/Impersonation Risk

No contradictions were observed. The site's presentation is consistent across its corporate, service, contact, and FAQ content, and the supplied checks found no phishing, impersonation, malicious-content, or confirmed blacklist indicators. The apparent operating history, stable page behavior, and clean external reputation support an established-site interpretation rather than an impersonation pattern. The operator's real-world identity remains independently unverified, so the on-site relationship with CYBERNET should be treated as an identity claim rather than proof.

EVIDENCE

- The domain was registered on 2015-12-14 and is 10.67 years old, with registration recorded through 2027-12-14.
- The site has 107 archive snapshots from 2016-04-13 through 2024-06-02, covering 9 tracked years.
- External reputation checks recorded 0 malicious and 0 suspicious detections, with no phishing or blacklist contradiction identified.
- The homepage and About page contain substantive ISP, infrastructure, coverage, signup, and support content, with no detected brand-impersonation indicators.

Regulatory Verification Notes

The About page identifies NBB as an ISP and states that it is powered by CYBERNET, describing CYBERNET as an established Pakistani Internet, data, and managed-services provider. This is coherent business disclosure, but independent operator identity verification is incomplete. The site does not present a license number or named licensing authority in the supplied content; this is a regulatory-transparency point for confirmation, not evidence of a scam. Signup forms request personal contact information and national ID images, described on

the site as required by regulators, making confirmation of the applicable legal basis, retention practice, and data-handling responsibilities appropriate before submission.

EVIDENCE

- The site's transport encryption uses a WE1-issued DV certificate valid to 2026-10-09.
- The About page states that NBB is powered by CYBERNET and describes CYBERNET's operations since March 1996 across 70 Pakistani cities.
- The signup and ordering flow contains 3 forms, including partner signup, user signup/ordering, and coverage or address lookup.
- The FAQ and Fair Usage Policy pages provide service-policy disclosures, while the supplied regulatory data records no displayed license authority or license number.

What to Verify Next

Before credential or payment interactions, independently corroborate the NBB–CYBERNET relationship through an official corporate or offline contact channel and confirm the relevant telecommunications authorization with the applicable registry. Review the privacy notice or contractual terms governing national ID collection, retention, sharing, and deletion, and confirm the applicable subscription cancellation, service-credit, refund, and payment-dispute arrangements. Contact details should be validated through an independently sourced channel rather than relying solely on information presented on the site.

EVIDENCE

- The About page is the primary source for the stated corporate relationship and should be used as the basis for independent identity corroboration.
- The signup and ordering pages are the points at which personal information and identity documentation are requested.
- The FAQ, Fair Usage Policy, and Contact pages are the relevant locations for checking service obligations, support routes, and customer remedies.

Summary Verdict

The overall posture is **high trust and low risk**, and the available evidence is consistent with an established, apparently legitimate website. The absence of contradictory signals supports normal consideration of the site's standard services, while the operator's independent identity remains an open verification matter.

Infrastructure Integrity

The website is protected by Cloudflare's CDN/WAF, and all observed addresses were CDN edge infrastructure rather than an exposed origin address. This reduces direct origin exposure and is a mitigating security control, although protective hosting alone does not establish the operator's identity.

EVIDENCE

- Hosted on AS13335, CLOUDFLARENET — Cloudflare, Inc., US; all 6 observed IP addresses were CDN edge addresses and 0 origin candidates were identified.

Closing Assessment

Proceed with ordinary independent merchant-identity, service-terms, and payment-protection checks before submitting credentials, identity documents, or payment details.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of nationalbroadband.pk.

- The request stayed on nationalbroadband.pk. It was not redirected to another domain. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-12-14. CLEAR
- The earliest public archive of this site is from 2016-04-13. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about nationalbroadband.pk at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
