- Public web-archive history exists since 2018.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Netdeal is a professional marketing landing site for an AI-enabled marketing and sales SaaS platform. It presents workflows, chatbots, analytics, customer-data and CRM capabilities, with the apparent business model of generating enterprise leads for software subscriptions and demonstrations.

Scam/Impersonation Risk

No contradictions were observed: the available evidence shows no phishing, malware, brand-impersonation, or deceptive credential-harvesting indicators. The homepage presents a coherent SaaS proposition, including AI-driven workflows, API and webhook integrations, chatbots for lead capture and personalized offers, analytics, heat maps, A/B testing, customer-data capabilities, and CRM functions. Its single form is intended for contact, demonstration requests, and lead capture rather than password collection. This substantive and internally consistent presentation is consistent with an established, apparently legitimate website, although the real-world operator identity remains independently unverified.

EVIDENCE

- Homepage: Describes Netdeal as an AI-based marketing and sales platform covering workflows, chatbots, analytics, CDP, CRM, and integrations.
- Homepage form: One contact/demo-request lead-capture form was identified; no login form, hidden form, or externally posted password form was detected.
- Domain registration: Registered 2017-05-11; approximately 9.25 years old.
- Web archive: 921 snapshots spanning 2018–2026, with 9 years tracked.

Regulatory Verification Notes

The site is presenting commercial SaaS rather than claiming to be a regulated financial service, and no licensing claim or registration number is supplied in the reviewed homepage content. That is a disclosure point for ordinary commercial due diligence, not evidence of deception. The homepage's commercial identity is presented as Netdeal, but the available evidence does not independently verify the legal entity operating the service. External reputation checks were clean, and no matching broker-related reputational signal was identified.

EVIDENCE

- Hosting infrastructure: Served from AS13335, operated by CLOUDFLARENET – Cloudflare, Inc., US.
- Transport encryption: TLS certificate issued by WE1 with DV validation, valid to 2026-10-18.
- Homepage disclosure: The reviewed content provides product and demonstration information but no licensing claim or registration number.
- External reputation: Evaluated checks recorded 0 malicious detections and 0 suspicious detections, with no phishing finding.

What to Verify Next

Before credential or payment interactions, the prospective customer should independently confirm the operating legal entity, obtain the applicable service agreement and data-processing terms, and validate that the named commercial contact channels resolve through an independently sourced route. For enterprise procurement, contract review should also confirm billing entity, refund or termination provisions, data-retention responsibilities, and security commitments.

EVIDENCE

- Homepage: The primary commercial action is a request for a product demonstration.
- Homepage lead-capture flow: The available form is designed for contact and demonstration engagement rather than sensitive authentication.
- Commercial due diligence: The supplied page evidence establishes the product proposition but does not independently establish the operator's legal-entity linkage.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture. The absence of contradictory signals and the convergence of coherent business content, sustained provenance, clean reputation, and valid technical controls support normal business evaluation, subject to the remaining identity qualification.

Infrastructure Integrity

Cloudflare CDN and WAF protection fronts the site, and all observed addresses were CDN edge infrastructure; no origin server address was identified in the analysis. This is a mitigating exposure-control measure, not proof of operator legitimacy.

Closing Assessment

Ordinary engagement is proportionate, while independent confirmation of the counterparty and commercial protections should precede credential submission, payment, or execution of a material enterprise agreement.

Written analysis generated 2026-08-10 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of netdeal.com.br.

- The request stayed on netdeal.com.br. It was not redirected to another domain. [CLEAR](#)
- DNS for this domain is served by cloudflare.com, across 2 name servers. [NOTED](#)
- The registration is paid up to 2029-05-11. [CLEAR](#)
- The earliest public archive of this site is from 2018-01-09. [CLEAR](#)
- It is hosted on CLOUDFLARENET, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about netdeal.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
