

Is netforcetelecom.com.br legit? TrustSniffer's high-trust assessment: 100/100

netforcetelecom.com.br

Verdict

100

OUT OF 100

HIGH TRUST

netforcetelecom.com.br appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-03 by automated analysis. Classification confidence 75%.

What this site appears to be

Portuguese-language website for Netforce Telecom, a regional telecommunications provider in Ribeirão Preto, Brazil. It advertises fiber internet plans with disclosed promotional and standard prices, installation fees, optional router service, customer-support channels, applications, billing self-service, and additional telecom products.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2016.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is the Portuguese-language commercial presence of Netforce Telecom, a regional telecommunications provider in Ribeirão Preto, Brazil, presenting residential and business fiber-internet subscriptions alongside mobile 5G, fixed-line telephony, security-camera services, customer self-service, and optional Wi-Fi equipment, with recurring fees, promotional pricing, installation charges, support channels, and a physical address.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, malicious reputation findings, or other scam-related conflicts were observed. The longstanding domain identity, extensive historical continuity, stable telecom-related purpose, and consistent current branding provide strong provenance. The callback form does not contain a login interface, submit passwords externally, conceal fields, or direct information to an untrusted destination.

- The domain registration record identifies NETFORCE Telecom as the owner and shows registration on 14 March 2015, making the domain approximately 11.4 years old.
- The web archive contains 515 snapshots from 1 November 2016 through 13 June 2026, spanning 11 tracked years with no gap exceeding one year.
- Historical captures associate the domain with telecom and security-camera services; the archive analysis found neither suspicious repurposing nor a substantiated fundamental change of purpose.
- External reputation checks recorded 0 malicious classifications, 0 suspicious classifications, no malicious safe-browsing finding, 0 abuse reports, and a global traffic rank of 221,942.

Regulatory Verification Notes

The homepage clearly identifies the operating brand, service region, physical presence, commercial terms, and customer-support routes. It does not, within the supplied page evidence, display a corporate registration identifier, telecommunications authorization number, or named regulator; this is a minor disclosure point rather than evidence of illegitimacy. No conflicting legal-entity name or adverse broker-related reputation match was identified.

- The homepage displays Ribeirão Preto, São Paulo, as the service location and provides separate sales and support telephone and WhatsApp channels.
- The homepage discloses promotional and subsequent monthly prices, a R\$100 installation charge, and an optional additional router priced at R\$30 per month.

- The supplied homepage content contains no claimed licence authority or licence number.
- The third-party broker dataset produced no matching broker record; this is contextual reputation information and not a licensing determination.

What to Verify Next

For procurement, regulated onboarding, or material service commitments, the contracting entity and applicable corporate registration should be matched to the service agreement and invoice. Any telecommunications authorization relevant to the contracted service should be confirmed through the appropriate official registry, while coverage, installation conditions, post-promotional pricing, cancellation terms, and official contact channels should be confirmed before execution.

- The homepage offers both residential and business services, making the intended customer category relevant to the governing contract.
- The homepage distinguishes introductory prices from higher subsequent monthly charges across the advertised plans.
- The homepage provides a physical address and established telephone-based channels that can support independent confirmation.
- The callback form requests customer details but has no untrusted submission destination or hidden fields.

Summary Verdict

The website presents as a legitimate, established, and trustworthy regional telecommunications business. Its identity, commercial content, historical provenance, technical operation, and external reputation converge without contradiction, supporting normal interaction, including account login and standard use.

Infrastructure Integrity

The site is hosted by Hostinger International Limited without a detected CDN or WAF layer, and two likely origin addresses are directly observable. This is a conventional hosting posture; direct origin visibility reduces infrastructure shielding but does not constitute an adverse trust signal, while valid transport encryption protects data in transit.

- The hosting infrastructure is served from AS47583 (Hostinger International Limited), with the observed server located in Lithuania.
- The site uses a valid domain-validated TLS certificate issued by YR1, valid until 21 September 2026.
- Infrastructure resolution identified 2 unique addresses, 0 CDN edge addresses, and 2 likely origin addresses.

Closing Assessment

Prospective customers may use the site normally, subject to routine contractual and supplier-onboarding checks proportionate to the value and duration of the service relationship.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY

About this assessment

A trust score summarises the evidence TrustSniffer could collect about netforcetelecom.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that

evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
