

Is nethorizon.pl legit? TrustSniffer's high-trust assessment: 100/100

nethorizon.pl

Verdict

100

OUT OF 100

HIGH TRUST

nethorizon.pl appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-07-31 by automated analysis. Classification confidence 70%.

What this site appears to be

Polish commercial homepage advertising hosting, VPS, domain, email, backup, networking, and managed IT services. It presents detailed service features, security and performance claims, account registration, support resources, legal-policy links, and system-status information without evident financial manipulation, credential harvesting, or brand impersonation.

Evidence status and limitations

Evidence completeness: UNKNOWN

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2023.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is an established Polish hosting and cloud-infrastructure provider offering web hosting, premium VPS servers, domain registration across more than 800 extensions, business email, off-site backup, networking, and managed IT services through an online customer-account model.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, malicious reputation findings, or deceptive financial mechanics were observed. The homepage presents a coherent service catalogue supported by account, help, contact, legal-policy, and system-status functions. Its long-established registration and continuous archived identity support provenance, while observed browser interactions showed no cloaking, hidden forms, credential forwarding, clipboard interference, or suspicious scripts.

- Domain registration records show registration on 16 July 2015, making the domain approximately 11.05 years old; the registration runs to 16 July 2027.
- The web archive contains 17 snapshots from 31 May 2023 through 9 February 2026, spanning four tracked years, with no suspicious repurposing or semantic drift identified.
- Reputation telemetry recorded zero malicious and zero suspicious detections, no search-browsing safety finding, no external blacklist finding, and no reported abuse for the resolved address.
- Behavioral examination of the homepage completed two successful runs without cloaking, hidden forms, external password forms, suspicious inline scripts, wallet-draining behavior, or clipboard hijacking.

Regulatory Verification Notes

The service is presented as a conventional infrastructure and software provider rather than a financial intermediary, broker, or digital-asset platform. The homepage exposes legal-policy links, but the supplied page evidence does not establish a named legal entity, corporate registration identifier, or sector-specific licence claim. This is a limited disclosure-verification matter, not evidence of fraud; no conflicting legal identities or adverse broker association were found. Registration through Consulting Service Sp. z o.o., a valid transport certificate, and an established ranked traffic presence provide additional operational corroboration.

- The homepage links to legal-policy material and describes hosting, server, domain, email, backup, network, and IT-administration services without making a financial-regulatory claim.
- Hosting telemetry identifies AS5617, operated by TPNET – Orange Polska Spolka Akcyjna, PL.
- The site's TLS certificate was issued by YE1 with domain validation and is valid until 28 October 2026.

- Traffic telemetry places the domain at rank 557,741, within the global top one million sites; the examined third-party broker dataset produced no match.

What to Verify Next

For enterprise procurement, the contracting legal entity and corporate registration details should be reconciled with the order documentation and applicable Polish business register. Service-level commitments, backup retention, recovery responsibilities, data-processing terms, and subprocessor arrangements should be reviewed before production workloads are migrated. Official support channels and escalation procedures should also be confirmed through the provider’s customer documentation.

- The homepage advertises daily VPS backups and retention of up to six months, making restoration scope and customer responsibilities material contractual points.
- The service description includes encrypted VPN tunnels, around-the-clock IT administration and monitoring, and off-site backup with deduplication.
- Customer operations are supported through online account registration, a ticketing system, a contact form, a knowledge base, and FAQ resources.
- The site presents system-status information, providing an observable channel for service-availability communications.

Summary Verdict

The evidence supports a confident assessment that this is a legitimate, established, and trustworthy commercial website. Its identity, operating model, technical behavior, historical provenance, and external reputation converge without contradictory risk signals. Normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

The site resolves directly to a single likely origin address in Poland and does not use a detected CDN or WAF. Direct origin visibility is normal for this deployment but provides less network-layer shielding than an edge-proxied architecture; standing alone, it does not detract from the site’s established trust posture.

Closing Assessment

Prospective customers may engage normally, while enterprise adoption should proceed through standard supplier due diligence, contractual review, and workload-specific resilience testing.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of nethorizon.pl.

- The request stayed on nethorizon.pl. It was not redirected to another domain. CLEAR
- Registration is published under Consulting Service Sp. z o.o.. CLEAR
- DNS for this domain is served by nethorizon.pl, across 2 name servers. NOTED
- The registration is paid up to 2027-07-16. NOTED
- The earliest public archive of this site is from 2023-05-31. CLEAR
- It is hosted on TPNET, from a server in PL. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about nethorizon.pl at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
