Key findings

- Automated classification: Not Scam.
- Public web-archive history exists since 2004.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website is an established German provider of web hosting, domain registration, virtual and root servers, hosted email, and reseller services, presenting defined service packages, pricing, technical capacities, customer testimonials, support claims, and a domain-search facility to prospective individual and business customers.

Scam/Impersonation Risk

No scam, phishing, impersonation, malware, or conflicting-identity indicators were observed. The commercial proposition is coherent with a conventional hosting provider: the homepage describes recurring infrastructure services and gives concrete package parameters, including a Windows ASP.Net 400 plan priced at €29.90 per month with an included domain, 1.2 GB of webspace, and 30 GB of traffic. The site's long operating history, substantial archival record, established traffic presence, and clean external reputation converge strongly with that presentation. Interactive testing also found no hidden forms, credential diversion, cloaking, suspicious scripts, wallet activity, clipboard manipulation, or untrusted outbound form submission.

- Domain provenance records show registration in 2004 (~22.3 years old).
- The web archive contains 331 snapshots spanning 2004–2026 (23 years tracked), with no detected suspicious repurposing or substantiated change of business category.
- The homepage contains one domain-search form; it requests no sensitive information and has no untrusted destination.
- External threat checks recorded 0 malicious and 0 suspicious detections, no safe-browsing finding, no reported IP abuse, and placement at rank 570,199 within the global top million.

Regulatory Verification Notes

The observed business model concerns hosting and related technical services rather than regulated financial or investment activity. The homepage provides navigation to terms and contact information, while the supplied page material does not establish the contents of those legal pages or identify any claimed sector-specific authorization. This is not a legitimacy concern for the services advertised, and no contradictory legal identities or unsupported licensing claims were found. The site uses valid domain-validated transport encryption on identified German hosting infrastructure.

- The homepage identifies the offering as web hosting, domains, servers, hosted email, and reseller services, with no cryptocurrency, brokerage, investment, or financial-return proposition.
- The site's hosting infrastructure is served from AS8648 (ONE-NETWORK – dogado GmbH, DE) in Germany.

- The site's transport encryption uses a TLS certificate issued by YR2 (DV), valid to 2026-09-06.
- The homepage provides navigation to standard terms and contact materials and presents customer-support claims alongside its commercial packages.

What to Verify Next

For material procurement or enterprise onboarding, due diligence should confirm the contracting entity and billing details shown during checkout, compare the ordered package against the applicable terms, and document service-level, backup, data-location, cancellation, and incident-support commitments. Official contact channels may also be confirmed independently before establishing a high-value or business-critical hosting relationship.

- The homepage advertises packages with specified storage, traffic, email, database, backup, and support entitlements, making those terms suitable for pre-contract comparison.
- Customer testimonials describe support responses within several hours, but the supplied material does not establish a contractual response-time commitment.
- The homepage markets services to individuals, businesses, and resellers, creating different operational and contractual requirements depending on the intended deployment.

Summary Verdict

The website is legitimate, established, and trustworthy, with multiple independent signals supporting a coherent commercial identity and a low-risk posture. No contradictory or deceptive behavior was identified, and normal interaction—including account login, account administration, and standard purchasing activity—is appropriate.

Infrastructure Integrity

The site resolves directly to a single likely origin address operated by ONE-NETWORK – dogado GmbH and does not use a detected CDN or WAF. Direct origin visibility is consistent with the observed hosting configuration; the identified German network, valid encryption, and resolved infrastructure provide a sound technical baseline, although infrastructure alone is not proof of legitimacy.

Closing Assessment

Prospective customers may use the site normally, applying standard procurement review for service scope and contractual commitments before placing business-critical workloads.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of nethosting24.de.

- The request stayed on nethosting24.de. It was not redirected to another domain. CLEAR
- DNS for this domain is served by v-dns.de, across 2 name servers. NOTED
- The earliest public archive of this site is from 2004-04-04. CLEAR
- It is hosted on ONE-NETWORK, from a server in DE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about nethosting24.de at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
