Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website is NetHouse's Portuguese-language corporate portal for residential and business fiber-optic internet services in Rio de Janeiro, presenting service-availability checks, customer support, subscriber account access, and an application for billing, contracts, and related account services.

Scam/Impersonation Risk

No scam, phishing, brand-impersonation, or conflicting-identity contradictions were observed. The site presents a coherent regional telecommunications business model, supported by a long-established domain, consistent corporate content, benign interaction behavior, and clean external threat-reputation results. Its homepage describes an operational progression from a small internet café to a fiber provider serving multiple Rio de Janeiro communities and condominiums; this history is consistent with the registered identity rather than suggestive of opportunistic brand misuse.

- The domain-registration record identifies Nethouse Telecom as the owner and shows registration in 2013 (~13.31 years old), with expiration scheduled for 2030.
- The homepage consistently identifies NetHouse as a Rio de Janeiro internet provider offering residential and business fiber plans, availability checking, customer support, and subscriber services.
- External reputation screening recorded 0 malicious detections, 0 suspicious detections, no reported malicious-search classification, and no external threat-list hit for the assessed domain.
- Interactive testing of the homepage found no hidden forms, external password forms, cloaking, suspicious inline scripts, clipboard interference, cryptocurrency-wallet activity, or untrusted outbound form destinations.

Regulatory Verification Notes

The homepage provides a clear trading identity, operating location, service description, and stated business history, but the supplied page evidence does not establish a specific telecommunications authorization or display a regulatory registration number. This is a limited disclosure-verification matter, not evidence of deception, and it does not create an identity contradiction. The identified registrant and the site's commercial presentation are mutually consistent.

- The homepage's "Who We Are" content states that the company is headquartered in Rio de Janeiro and supplies fiber-optic connectivity to residential and business customers.
- The domain-registration record names Nethouse Telecom, while the homepage uses the corresponding NetHouse brand; no competing legal-entity name was identified.

- The hosting infrastructure is served from AS263263 (Star Servicos de Internet LTDA, BR).
- The site's transport encryption uses a YR2-issued DV TLS certificate, valid to 2026-10-01.

What to Verify Next

For procurement, regulated onboarding, or material contractual commitments, the prospective counterparty should obtain the full contracting-entity name and corporate registration details from the service agreement, confirm any applicable telecommunications authorization through the relevant official registry, and validate the service address and billing channels using independently sourced corporate records. Standard consumer interaction does not require exceptional restrictions.

- The homepage offers residential and business subscriptions, making the identity of the contracting entity relevant to commercial onboarding and dispute handling.
- The subscriber application is described as supporting billing, contracts, and account services, which warrants routine confirmation that account communications and payment instructions originate from official channels.
- The availability-check function indicates geographically bounded service delivery, supporting confirmation of coverage and contractual service levels for the intended address.

Summary Verdict

The website is a legitimate, established, and trustworthy corporate service portal. Independent technical, reputational, identity, content, and behavioral signals converge without material contradiction, supporting normal interaction, including account login and standard use.

Infrastructure Integrity

The domain resolves to two likely origin addresses in Brazil and does not appear to use a CDN or WAF. Direct origin visibility provides less network-layer shielding than an edge-protected deployment, but the resolved infrastructure is coherent with the site's regional ISP function and carries no observed abuse indication; this remains a mitigatingly stable, though not independently legitimacy-proving, infrastructure posture.

Closing Assessment

Prospective users may proceed with normal service enquiries, account access, and ordinary transactions, applying standard contractual due diligence for higher-value business engagements.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of nethouserj.com.br.

- The request stayed on nethouserj.com.br. It was not redirected to another domain. CLEAR
- DNS for this domain is served by dns.br, across 2 name servers. NOTED
- The registration is paid up to 2030-04-13. CLEAR
- It is hosted on AS263263, from a server in BR. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about nethouserj.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
