

Is netlana.com a scam? TrustSniffer's high-risk assessment: 0/100

netlana.com

Verdict

0

OUT OF 100

CRITICAL RISK

netlana.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 55%.

What this site appears to be

Maintenance landing page for 'Netlana's Web Services' showing a brief coming-soon message and a user login prompt; no business details or contact information provided.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

The page as captured

<https://netlana.com/>

What netlana.com served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2018.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

Netlana.com presents a minimal maintenance landing page for “Netlana’s Web Services,” stating that the website is coming soon while offering a user login and lost-password function; its apparent service model and operational purpose are not explained to visitors.

Scam/Impersonation Risk

The site presents a **critical sensitive-interaction risk**. A login prompt is exposed without surrounding service, business, or account context, creating an unjustified credential-entry surface. External threat intelligence recorded three malicious and two suspicious detections, together with a confirmed blacklist hit from multiple external sources. No separate brand-impersonation or conflicting legal-identity finding was established, but the combination of the login-only presentation and confirmed external reputation warnings is sufficient to treat credential and financial interaction as unsafe.

EVIDENCE

- The homepage displays “Netlana’s Web Services,” a maintenance notice, “User Login,” and “Lost Password,” but provides no service explanation or account context.
- External reputation assessment recorded `vt\_malicious: 3`, `vt\_suspicious: 2`, and `external\_blacklist: true`.
- The homepage contains one sensitive login form; behavioral observation recorded two password forms and no external form destination.

Regulatory Verification Notes

The available material does not independently establish the real-world operator, regulated status, or licensing basis for the service. No license claim or license number is presented, and the public page does not provide the corporate or contact disclosures normally needed to connect the service to an accountable legal entity. The domain is registered through NameSilo, LLC, which is an administrative registration fact and does not validate the operator or business activity. Identity verification therefore remains unverified.

EVIDENCE

- Registered 2018-01-31 and recorded as approximately 8.56 years old; registrar: NameSilo, LLC.
- TLS certificate issuer: YR2; validation level: DV; valid to 2026-10-14T08:51:17+00:00.
- The available homepage content contains no licensing statement, registration number, company address, or contact information.

What to Verify Next

Before any interaction beyond passive viewing, an independent party should identify the operator through an offline or independently sourced channel, confirm any claimed authorization with the relevant licensing or corporate registry, and establish that the login endpoint belongs to that operator. Credentials should not be submitted, passwords should not be reused, and no financial authorization should be granted unless those checks produce authoritative confirmation.

EVIDENCE

- Confirm the legal entity and service owner using records obtained independently of the website.
- Check any asserted license or registration directly with the relevant regulator or registry rather than relying on an on-site statement.
- Validate the official support and contact channels through an independent route before attempting account recovery or login.

Summary Verdict

The overall posture is **critical and unsuitable for sensitive interaction**. The available evidence does not support treating the site as an established or independently verified service, and the external reputation contradictions materially outweigh the limited technical indications of a functioning website.

Infrastructure Integrity

The domain resolves directly to infrastructure operated by FIBERSTATE - FiberState, LLC, in the United States, with no CDN or WAF detected and a likely origin endpoint exposed. This provides no meaningful protective mitigation against the externally recorded reputation concerns.

EVIDENCE

- Hosted on AS26042 (FIBERSTATE - FiberState, LLC, US); resolved IP: 206.168.149.58.
- Infrastructure assessment recorded one unique IP, zero edge IPs, and one likely origin IP.

Closing Assessment

The appropriate enterprise posture is to restrict the site to passive observation and prevent credential, account-recovery, payment, or other sensitive activity until independent identity, authorization, and channel validation are complete.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, page content, analysis engine, external reputation.

01 Governance Risk

- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE
- The page presents a sign-in form, and the operator behind it could not be independently verified.
Page content rule:PAGE_TYPE_LOGIN_UNVERIFIED
- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of netlana.com.

- The request stayed on netlana.com. It was not redirected to another domain. CLEAR
- Registration is published under NameSilo, LLC. CLEAR
- DNS for this domain is served by iaasdns.com, across 2 name servers. NOTED
- The registration is paid up to 2027-01-31. NOTED
- The earliest public archive of this site is from 2018-08-06. CLEAR
- It is hosted on FIBERSTATE, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about netlana.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
