

Is norbertklaiberhomes.com a scam? TrustSniffer's high-risk assessment: 0/100

norbertklaiberhomes.com

Verdict

0

OUT OF 100

CRITICAL RISK

norbertklaiberhomes.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 55%.

What this site appears to be

A Chinese-language adult video aggregation site listing many explicit categories and dozens of video titles/descriptions. The page states it is a non-profit aggregator that does not host content but forwards to source sites. No verifiable contact, legal, or commercial credentials are present on the captured content.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

The checks that decide most of this verdict.

Malware engines	8 flagged it VirusTotal	RISK
Google Safe Browsing	Not listed Google	CLEAR
Abuse reports on the host	0 reports AbuseIPDB; shared hosting inflates this count	NOTED
Domain age	6.7 years old Registered history	CLEAR
Web archive	Archived since 2011 Public history exists	CLEAR
Certificate	Encrypted connection Issued by WE1	NOTED

The page as captured

https://norbertklaiberhomes.com/

What norbertklaiberhomes.com served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2011.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website is a Chinese-language adult-video aggregation and indexing portal presenting explicit categories, video titles, and descriptions to visitors. It states that it does not host the material itself but redirects visitors to third-party source sites, indicating a free, traffic-driven or advertising-supported model rather than a conventional goods, services, or investment business.

Scam/Impersonation Risk

The site presents a **confirmed security and reputational risk** because external security evaluations identified malicious detections and a confirmed blacklist listing. The available evidence does not indicate a phishing login page, brand impersonation, or an identity contradiction involving multiple legal entities; however, those absences do not offset the confirmed external detections. Browser observation also recorded four non-whitelisted external requests, substantial post-interaction page changes, and repeated console errors, which are additional reasons to avoid treating linked destinations as trustworthy by default. The site's long-running archival presence does not resolve the current security concern or independently verify the operator.

EVIDENCE

- The homepage is an explicit-media index containing numerous adult categories, third-party video descriptions, and onward links rather than verified publisher credentials.
- External reputation evaluation recorded 8 malicious detections and 1 suspicious detection, with a confirmed blacklist status.
- Archive records show 92 snapshots spanning 2011–2025, covering 15 years of tracked history; this historical continuity is not proof of current safety.
- Browser behavior recorded 4 non-whitelisted external XHR requests, a maximum DOM difference of 1125 after interaction, and 10 console errors across 2 successful runs.

Regulatory Verification Notes

The captured homepage provides no verifiable operator contact, legal entity, licensing, or commercial credentials. Because the site presents itself as a free adult-content aggregator rather than a financial or regulated service, no specific financial license claim is available to assess; nevertheless, the absence of accountable legal and contact disclosures limits independent identity verification. Registration privacy is an administrative limitation rather than a standalone finding. The available evidence therefore supports neither a verified real-world operator identity nor a regulatory endorsement.

EVIDENCE

- The homepage contains no verifiable contact, legal, or commercial credentials.
- The domain was registered through NameSilo, LLC in 2019 and is approximately 6.66 years old.
- The site is served through AS13335, Cloudflare, Inc. (CLOUDFLARENET), United States.
- The transport certificate is DV, issued by WE1, and valid to 2026-10-30.

What to Verify Next

Before any sensitive interaction, an enterprise or prospective user should independently confirm the operator and official contact route through an offline or separately sourced channel, inspect every onward destination before opening it, and have security controls block or sandbox the domain where policy requires. Any engagement involving account creation, credential submission, downloads, or financial information should remain outside the permitted use case unless the external detections have been independently resolved by the responsible security function.

EVIDENCE

- The captured homepage is the primary location for assessing operator disclosures, yet it supplies no verifiable legal or contact credentials.
- The site states that content is forwarded to third-party source sites, making destination-level inspection material to any browsing decision.
- The captured page contains no login form, password form, or wallet-connection activity, so the principal concern is exposure to linked or redirected content rather than an observed credential form on the homepage.

Summary Verdict

The overall posture is **critical and unsuitable for sensitive interaction**. The confirmed external security detections and blacklist status outweigh the site's technical availability, transport encryption, and historical presence. Operator identity remains unverified, and the evidence does not support treating the website as a trusted destination.

Infrastructure Integrity

Cloudflare CDN/WAF protection is present, with all four observed addresses operating as Cloudflare edge infrastructure and no origin candidate observed. This reduces direct origin exposure and is a mitigating infrastructure characteristic only; it does not establish legitimacy or neutralize the external security findings.

Closing Assessment

The appropriate enterprise posture is to restrict the site to controlled, read-only observation, prevent credential and financial interactions, and require security-team approval before permitting access to any linked destination.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox, external reputation.

01 Governance Risk

- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE
- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- Most of what the page loaded came from other domains rather than from this one.
Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_HIGH
- The structure of the page changed sharply while it was loading.
Behaviour in a sandbox rule:BEHAV_DOM_DENSITY_SPIKE
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100

Identity verification confidence	25%
----------------------------------	-----

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of norbertklaiberhomes.com.

- The request stayed on norbertklaiberhomes.com. It was not redirected to another domain. CLEAR
- Registration is published under NameSilo, LLC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2026-12-24. NOTED
- The earliest public archive of this site is from 2011-10-17. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about norbertklaiberhomes.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
