

Is notaprogrammer.com legit? TrustSniffer's high-trust assessment: 100/100

notaprogrammer.com

Verdict

100

OUT OF 100

HIGH TRUST

notaprogrammer.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 50%.

What this site appears to be

A personal blog titled 'Not A Programmer' offering Python-based tutorials and resources focused on automation and finance-related scripting. The content is educational and links to standard developer resources.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Welcome to my website!

What notaprogrammer.com served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2014.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Not A Programmer is a personal technical blog that presents Python tutorials, workplace-automation guidance, and finance-related scripting resources, with links to developer libraries and the author's GitHub profile.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents coherent educational content rather than a financial solicitation, deposit flow, credential-collection mechanism, or impersonation of a recognizable brand. Available external reputation checks found no malicious, phishing, or blacklist indicators, and observed browser behavior showed no suspicious external activity, hidden forms, wallet interaction, or cloaking. The available evidence is therefore consistent with a legitimate, low-risk informational website, although the real-world operator identity is not independently verified.

EVIDENCE

- The homepage identifies the site as “Not A Programmer” and describes tutorials on Python, automation, productivity, and financial analysis.
- The site's observed behavior completed 2 of 2 runs successfully, with 0 external XHR requests, 0 hidden forms, 0 wallet-provider detections, and no cloaking classification.
- Domain registration telemetry: registered 2020-08-02 (~6.05 years old) through NAMECHEAP INC.

Regulatory Verification Notes

The site appears to operate as an author-run informational blog and does not present a regulated financial-service offering or make a licensing claim. The About, Articles, and Contact Me navigation supports a personal publishing model, but the supplied pages do not independently establish a legal entity or connect the author to a verified real-world organization. This is an identity and disclosure matter rather than evidence of deception. A separate broker-reputation dataset returned no matching broker record, which is contextual support only and not a licensing determination.

EVIDENCE

- The homepage and navigation identify informational articles, an About page, and a Contact Me page; no regulated product or license number is presented in the supplied content.
- Hosting telemetry: served from AS47583, AS-HOSTINGER - Hostinger International Limited, CY.
- Transport telemetry: TLS certificate issued by YE1, domain-validated (DV), valid to 2026-11-05.

What to Verify Next

Before any future credential or payment interaction, an independent check should confirm that the author's identity and contact channels correspond with the linked GitHub presence and any independently controlled professional profile. If the site later introduces paid services, financial products, or regulated activity, the relevant company registration, authorization, terms, refund arrangements, and payment-protection controls should be confirmed through authoritative sources before use.

EVIDENCE

- The homepage links to GitHub and standard resources including Python.org, Pandas, and Matplotlib.
- The site navigation exposes dedicated About and Contact Me pages for authorship and contact-channel comparison.
- The supplied homepage analysis found no sensitive form, login form, payment flow, or untrusted form destination.

Summary Verdict

The overall posture is high trust and low risk. Available evidence is consistent with an established, apparently legitimate informational website, while the operator's real-world identity remains unverified.

Infrastructure Integrity

The site is directly hosted by Hostinger without a detected CDN or edge-IP layer. This configuration provides ordinary hosting rather than specialized perimeter protection, but it presents no identified infrastructure-based contradiction and should be treated only as a neutral technical observation, not proof of legitimacy.

Closing Assessment

Normal informational browsing is proportionate; any later account, payment, or commercial interaction should follow the independent identity, terms, and payment-protection checks described above.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	55/100
Identity verification confidence	30%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of notaprogrammer.com.

- The request stayed on notaprogrammer.com. It was not redirected to another domain. CLEAR
- Registration is published under NAMECHEAP INC. CLEAR
- DNS for this domain is served by dns-parking.com, across 2 name servers. NOTED
- The registration is paid up to 2027-08-02. NOTED
- The earliest public archive of this site is from 2014-01-06. CLEAR
- It is hosted on AS-HOSTINGER, from a server in UA. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about notaprogrammer.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
