What oacc.om served when TrustSniffer captured it on 2026-08-20. The page may look different now.

## Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2017.
- No flags from the reputation services TrustSniffer consulted at assessment time.

## Full analysis

### Overview

Oman Aircraft Control College is an informational aviation-training website presenting civil and military air-traffic-control courses, unmanned-aircraft and electronic-warfare training, events, galleries, testimonials, and admissions calls to action. Its apparent business model is institutional education and training, with revenue expected from course tuition, training services, and event participation.

### Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent educational purpose, with course categories including civil aviation, fighter control, unmanned operations, electronic warfare, and training delivery and development; this is consistent with the stated institutional identity rather than a deceptive or unrelated commercial model. The site has no detected login form, sensitive form, hidden form, wallet-connect activity, external password submission, or brand-impersonation indicator. Available external checks show no malicious, phishing, or blacklist flags, although reputation coverage was not complete.

#### EVIDENCE

- Domain age is 9.41 years, based on registration continuity.
- Archive history records 106 snapshots spanning 2017–2026, covering 10 tracked years.
- The homepage capture returned successfully and contained substantive aviation-training content, with no listed red flags or impersonation indicators.

### Regulatory Verification Notes

The About and Contact areas identify the institution as Oman Aircraft Control College, while registration records name Oman Aircraft Control College and list Oman Data Park LLC (ODP) as registrar. This evidence is consistent with an established educational website, but the real-world operator identity remains likely rather than independently verified. The reviewed pages do not state an aviation-training license, approval number, or registration reference; this is a regulatory-disclosure gap requiring confirmation with the relevant aviation or education authority, not evidence of a scam. A separate broker-reputation dataset produced no match, which is contextual only and does not establish licensing or regulatory status.

#### EVIDENCE

- Hosting is identified as AS201684, Oman Data Park SAOC, Oman.
- TLS uses a DV certificate issued by Sectigo Public Server Authentication CA DV R36, valid through 2026-10-01.
- The registration record lists Oman Data Park LLC (ODP) as registrar and Oman Aircraft Control College as the organization.
- The homepage, About area, and Contact area provide the institutional and admissions context but no stated license number or regulatory approval reference.

### What to Verify Next

Before any credential or payment interaction, an independent check should confirm that the named college is the authorized operator of the domain and that its aviation-training activities are recognized by the applicable Omani aviation or education regulator. Course applicants should also obtain the applicable tuition, cancellation, refund, and certificate terms in writing and confirm official support channels through an independently sourced institutional contact route.

#### EVIDENCE

- The course and admissions areas invite prospective students to engage with training services, making confirmation of applicable approvals and payment terms relevant.
- The About and Contact areas provide the natural points for matching the institution's public identity against an independent official record.
- The site presents course listings and events but does not provide a visible license or approval reference for independent regulatory matching.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture with no observed scam or impersonation contradictions. The assessment supports ordinary site interaction in principle, while the operator’s real-world identity remains likely rather than independently proven.

Infrastructure Integrity

The hosting record identifies Oman Data Park infrastructure, and the site uses transport encryption from a recognized certificate authority. The supplied evidence does not establish a separate CDN, WAF, or origin-obfuscation layer; this is a technical characterization rather than a negative legitimacy finding.

Closing Assessment

Prospective users may proceed with normal informational and enrollment-related consideration, subject to the ordinary independent identity, approval, refund-policy, and payment-protection checks appropriate for an education provider.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

|                                  |        |
|----------------------------------|--------|
| Status                           | LIKELY |
| Identity score                   | 79/100 |
| Identity verification confidence | 78%    |

- Trusted social count=3

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of oacc.om.

- The request stayed on oacc.om. It was not redirected to another domain. CLEAR
- Registration is published under Oman Data Park LLC (ODP). CLEAR
- DNS for this domain is served by otech-cloud.om, across 3 name servers. NOTED
- The earliest public archive of this site is from 2017-03-22. CLEAR
- It is hosted on ODPASN, from a server in OM. NOTED

## About this assessment

A trust score summarises the evidence TrustSniffer could collect about oacc.om at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
