

Is okde.hu a scam? TrustSniffer's high-risk assessment: 0/100

okde.hu

Verdict

0

OUT OF 100

CRITICAL RISK

okde.hu shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 55%.

What this site appears to be

Website for the Országos Kriminalisztikai és Detektív Egyesület (OKDE) — an informational site describing the association, its events, membership and contact information. No signs of financial investment offerings, credential harvesting, or brand impersonation in the provided content.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

The page as captured

<https://www.okde.hu/>

What okde.hu served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2014.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

The website presents itself as the informational home of the Országos Kriminalisztikai és Detektív Egyesület (OKDE), a Hungarian professional association focused on criminology, detective traditions, events, news, membership, and contact information rather than financial services or online transactions.

Scam/Impersonation Risk

The site's visible content is consistent with an informational association website: the homepage describes professional activities, events, membership, and contact details, with no observed login form, credential-collection mechanism, investment solicitation, or payment workflow. However, this benign presentation is materially contradicted by confirmed external malicious detections and blacklist status. A separate similarity signal associated the domain with "ok.ru," but this is not treated as confirmed impersonation because the page content identifies OKDE and the page review found no brand-impersonation indicators. The confirmed external reputation issue is nevertheless sufficient to make sensitive interaction inappropriate. The published site history

also supports continuity rather than a suspicious repurposing narrative, but that does not offset the external threat findings.

EVIDENCE

- External assessment recorded 13 malicious detections, with an active blacklist hit and Tier-1 threat detections.
- The homepage identifies OKDE as a criminology and detective association and contains no login form or sensitive data-collection form.
- The domain was registered on 2013-01-31 and is approximately 13.56 years old.
- Archive records show coverage from 2014-01-08 through 2026-06-06, spanning 13 years tracked.

Regulatory Verification Notes

The site's apparent business model is non-profit professional-association activity supported by membership and events, not a regulated financial offering. The provided pages do not independently establish the real-world legal operator, registration status, or a verified responsible entity; the identity therefore remains unverified. No financial license is claimed, but the absence of such a claim is relevant primarily as a disclosure and verification matter rather than evidence of a scam. The site's transport and hosting indicators are technically ordinary and do not overcome the adverse external reputation.

EVIDENCE

- The homepage and navigation identify the association, its presidency, events, news, membership, and contact sections.
- The site's hosting resolves through AS16509, Amazon.com, Inc. (AMAZON-02), US.
- TLS uses issuer YR2 with DV validation and is valid to 2026-10-21.
- No match was identified in the supplied broker-reputation dataset.

What to Verify Next

Before any sensitive interaction, an institution should independently confirm that OKDE is the intended Hungarian association through the relevant official association or corporate registry and obtain confirmation from a contact channel sourced independently of the website. Any proposed membership payment or event transaction should be checked for a matching legal payee, documented terms, and payment-protection options. Security teams should also validate the domain and any downloaded material in a controlled environment before permitting credentials, internal data, or financial information to be used.

EVIDENCE

- The homepage provides the association name, presidential attribution, address, and membership invitation as the primary identity anchors.
- The site has no sensitive form or login workflow in the observed page content.
- The supplied identity assessment records the operator connection as unverified.

Summary Verdict

The overall posture is critically untrusted for sensitive interaction. The site's apparently benign informational purpose is outweighed by confirmed external reputation contradictions, and the available evidence does not support treating the website as a dependable channel for authentication, credentials, or financial activity.

Infrastructure Integrity

Cloudflare CDN/WAF protection is present, with two observed edge servers and one potential origin candidate. This provides a mitigating layer against some direct exposure and traffic-abuse conditions, but protective delivery infrastructure is not evidence that the site or its operator is legitimate.

Closing Assessment

Sensitive use should remain suspended pending independent confirmation of the association and resolution of the external security reputation issue; read-only review is the proportionate interim posture.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox, external reputation.

01 Governance Risk

- The public registration record for this domain is incomplete.
Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- Most of what the page loaded came from other domains rather than from this one.
Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_HIGH
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of okde.hu.

- The request stayed on okde.hu. It was not redirected to another domain. CLEAR
- The earliest public archive of this site is from 2014-01-08. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about okde.hu at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
