Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

This website is the corporate service portal of Van Telecom, an Odessa-based Ukrainian telecommunications provider offering business internet, fiber-optic connectivity, Ethernet transport, office networking, billing, and domain or autonomous-system registration services.

Scam/Impersonation Risk

No contradictions were observed. The site presents a coherent telecommunications business model, identifies a Ukrainian legal entity, provides a physical Odessa address and telephone contacts, and shows no phishing, brand-impersonation, deceptive financial, or malicious-reputation indicators. Its long-established domain further supports continuity of identity. Normal interaction, including account login and standard account use, is appropriate.

- Homepage: identifies “ТОВ ‘Ван Телеком’” and presents business connectivity and network services.
- Homepage: provides an Odessa office address and two telephone numbers.
- Domain registration: Registered 2009-01-15; 17.55 years old.

Regulatory Verification Notes

The legal and service presentation is consistent with an operating B2B telecom provider. The site describes internet connectivity, Ethernet transport, optical lines, billing, domain registration, LIR services, and autonomous-system registration, but does not state a specific regulatory license or license number; this is a transparency point for formal verification rather than evidence of misconduct. No relevant third-party broker match was identified.

- Homepage: copyright attribution states “ТОВ ‘Ван Телеком’” and the service catalogue covers telecom and registration services.
- Hosting: Served from AS24940 (Hetzner Online GmbH, Germany).
- TLS: Certificate issued by YR1, domain-validated, valid to 2026-10-14.

What to Verify Next

For regulated procurement or interconnection, confirm the provider’s corporate and telecom standing through the relevant Ukrainian registries and obtain any applicable authorization details directly from the company. Independently confirm the official support and billing channels before changing account or payment instructions.

- Homepage: includes company, services, news, connection, billing, and account-access functions.
- Homepage: lists domain, LIR, Class C network, and autonomous-system registration offerings.

Summary Verdict

The website has a high-trust posture and reads as a legitimate, established corporate service portal. The available evidence supports routine browsing, account login, and standard use without indicators of impersonation or malicious activity.

Infrastructure Integrity

The site benefits from CDN/WAF protection, with observed traffic associated with AS24940 operated by Hetzner Online GmbH; this protective architecture reduces direct exposure of the underlying service infrastructure but is mitigating evidence only, not proof of legitimacy.

Closing Assessment

Prospective users may engage with the site for ordinary business and account functions, while regulated or material commercial arrangements should complete the standard independent corporate and authorization checks.

Written analysis generated 2026-08-01 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about onetelecom.od.ua at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
