

Is opeanseas.com a scam? TrustSniffer's high-risk assessment: 0/100

opeanseas.com

Verdict

0

OUT OF 100

CRITICAL RISK

opeanseas.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 55%.

What this site appears to be

A short time-locked content/puzzle page titled 'Time-Locked Reveal' showing an availability date and a short unusual-paragraph puzzle. No forms, links, or monetization present.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

Content Unlocked

This content becomes available on Oct 3, 2025, 8:00 PM (America/Belize).

What opeanseas.com served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2023.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website is a minimal informational page titled “Time-Locked Reveal” that presents a scheduled content release and a short puzzle paragraph. Its apparent purpose is creative or recreational publishing rather than commerce, financial services, credential collection, or other transactional activity.

Scam/Impersonation Risk

The site presents a **critical sensitive-interaction risk** despite the benign appearance of the homepage. External security intelligence recorded malicious and suspicious detections and confirmed blacklist status, creating a material contradiction between the page’s harmless puzzle content and the site’s external risk indicators. The available evidence does not identify brand impersonation, phishing, or conflicting legal identities, but the confirmed blacklist signal is independently sufficient to warrant a security-forward posture. Abuse reports associated with an observed shared hosting-provider address are relevant context, although their attribution is to shared infrastructure rather than conclusively to this website.

EVIDENCE

- The homepage contains the “Time-Locked Reveal” puzzle and no login form, payment mechanism, credential request, or external link.
- External evaluation recorded 11 malicious detections and 2 suspicious detections, with a confirmed blacklist status.
- Historical records cover 2023-06-05 through 2026-04-20 across 4 years; the scored historical record contains 8 archive snapshots.
- The authoritative continuity assessment records a domain age of 3.21 years; the registration record lists creation on 2025-10-01T20:39:47Z.

Regulatory Verification Notes

The site’s apparent business model is informational, so no financial-service licensing claim is evident from the reviewed homepage. However, the page does not provide a licensing or registration number that would support independent regulatory verification, and the real-world operator remains unverified. This is a verification gap rather than proof of misconduct. The observed abuse-report signal should be treated as a reputational indicator only because it is attributed to shared data-center infrastructure; the available broker-reputation comparison produced no matching broker result.

EVIDENCE

- The homepage describes scheduled creative content and does not state a regulated service, license authority, or license number.
- The hosting registration record lists Name.com, Inc. as registrar and Netlify Inc as the organization.
- The observed shared infrastructure address has 656 abuse reports, a confidence score of 21, and a data-center/web-hosting/transit classification.
- The site is served on AS16509, identified as AMAZON-02 – Amazon.com, Inc., US; its TLS certificate is DV, issued by YE1, and valid through 2026-10-26T15:37:59+00:00.

What to Verify Next

Before any account creation, credential submission, payment, download, or other sensitive interaction, an organization should independently confirm the operator through an authoritative business or regulatory registry and validate that the domain is the intended official address. Any future contact or support channel should be confirmed through an independent, offline route rather than relying solely on information presented by the site. Security controls should also block or isolate the domain until the blacklist detections have been independently resolved.

EVIDENCE

- The reviewed homepage provides no operator identity, regulatory reference, or licensing identifier suitable for independent confirmation.
- The page contains no current transaction or credential workflow, limiting the assessment of how the domain might behave during later interaction.
- The external security detections remain materially inconsistent with the homepage's low-risk informational presentation.

Summary Verdict

The website should be treated as an **unverified and critically unsafe destination for sensitive interaction**. Its benign visible content does not offset the convergent external detections and confirmed blacklist status, and the available evidence is insufficient to establish a trustworthy real-world operator.

Infrastructure Integrity

The site is protected by AWS CDN/WAF infrastructure, with observed traffic terminating at CDN edge servers and no origin server address observable in this analysis. This provides a meaningful layer of exposure reduction, but protective hosting infrastructure is a mitigating technical control—not evidence that the website itself is legitimate.

Closing Assessment

Enterprise controls should maintain a non-interactive or blocked posture for this domain pending independent resolution of the external detections and confirmation of the operator's legitimacy.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

01 Governance Risk

- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.

Registration and ownership rule:KF_WHOIS_PRIVATE

- The registration record withholds contact details for the operator.

Registration and ownership rule:KF_WHOIS_HIDDEN

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Analysis engine signal:direct_threat

- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.

External reputation rule:EXT_BLACKLIST_CRITICAL

Signals weighed against the site

- AbuseIPDB: 656 reports on hosting IP 63.176.8.218 (A100 ROW GmbH, Data Center/Web Hosting/Transit), 21% confidence. The reports are attributed to shared infrastructure, not specifically to this website.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of opeanseas.com.

- The request stayed on opeanseas.com. It was not redirected to another domain. CLEAR
- Registration is published under Name.com, Inc.. CLEAR
- DNS for this domain is served by nsone.net, across 4 name servers. NOTED
- The registration is paid up to 2026-10-01. NOTED
- The earliest public archive of this site is from 2023-06-05. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about opeanseas.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
