

Is oxfordmail.co.uk legit? TrustSniffer's high-trust assessment: 90/100

oxfordmail.co.uk

Verdict

90
OUT OF 100

HIGH TRUST

oxfordmail.co.uk appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 75%.

What this site appears to be

Local Oxford Mail news page featuring headlines across news, sport, events and local notices. Site promotes subscriptions, digital editions and local advertising; standard editorial and contact information present.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 1999.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Oxford Mail is an established local-news website presenting Oxfordshire reporting, sport, events, court and crime coverage, business news, public notices, newsletters, digital editions, subscriptions, classified advertising and local listings. Its apparent business model is a conventional newspaper operation funded through subscriptions, digital editions, advertising, sponsored content and promoted listings.

Scam/Impersonation Risk

No contradictions were observed across the available evidence: there were no phishing, impersonation, conflicting-identity, blacklist, or malicious-reputation findings. The homepage presents a coherent local-newspaper service with editorial sections, public notices, subscriptions and contact facilities, and the observed behavior did not expose login forms, password submission, wallet-connect activity, clipboard manipulation or hidden sensitive forms. Dynamic behavior included unusual inline scripting, external requests and substantial page changes after interaction, but these signals were not accompanied by cloaking, credential capture or other abuse patterns and are consistent with a content-and-advertising site. The available evidence therefore supports an apparently legitimate, low-risk website while not independently proving the real-world operator identity.

EVIDENCE

- The homepage was classified as a local news/newspaper page with no red flags and no suspected brand impersonation.
- External reputation checks recorded `vt\_malicious: 0`, `vt\_suspicious: 0`, `gsb\_malicious: false`, `external\_blacklist: false`, and `abuseipdb\_reports: 0`.
- The domain was registered on 2004-05-23 and is approximately 22.23 years old.
- Web archives contain 5,000 snapshots spanning 1999–2021, with 23 years tracked.

Regulatory Verification Notes

The site's captured content is consistent with a local newspaper rather than a financial or other regulated-services provider. Editorial branding, local-news coverage and standard contact information are present, while the available evidence does not independently verify the real-world publisher identity. No financial licensing claim or license number is presented in the supplied site content; for this business model, that is a disclosure consideration rather than evidence of deception. A linked social presence and the site's apparent established operation provide contextual support, but neither independently establishes legal ownership.

EVIDENCE

- The homepage title is “Oxford News, Sport, Events | Oxford Mail,” and the page provides links for news, sport, events, business, notices, subscriptions and contact.
- The site links to `newsquest.co.uk` and maintains a Twitter presence associated with Oxford Mail.
- The website is served from AS8075, identified as MICROSOFT-CORP-MSN-AS-BLOCK — Microsoft Corporation, US.
- TLS uses GeoTrust TLS RSA CA G1 with DV validation and is valid through 2026-12-16.

What to Verify Next

Before credential or payment interactions, an organization should independently confirm the publisher details shown in the site’s contact and editorial information, review the subscription, cancellation and refund terms, and ensure that payment protections are available through the selected payment method. Any material commercial engagement should use contact channels confirmed through an independent route rather than relying solely on a page link.

EVIDENCE

- The homepage offers subscription and digital-edition pathways, creating a defined point for reviewing commercial terms.
- The contact page is present in the site’s internal navigation.
- The site’s business model includes subscriptions, digital editions, advertising and local classifieds rather than investment or financial-return products.

Summary Verdict

The overall posture is **high trust**, and the available evidence is consistent with an established, apparently legitimate local-news website. No scam or impersonation contradictions were identified. The principal qualification is that the real-world operator identity remains likely rather than independently verified.

Infrastructure Integrity

The website benefits from a CDN/WAF-protected delivery architecture, and observed addressing was confined to the protective edge layer rather than exposing a direct origin candidate. This reduces direct infrastructure exposure and is a mitigating security characteristic, although protective hosting alone does not establish legitimacy.

EVIDENCE

- CDN/WAF protection was detected.
- One edge address was observed, with zero likely origin-IP candidates.
- The observed edge address was `20.90.133.1`.

Closing Assessment

Normal browsing and ordinary use are proportionate to the assessed posture; before entering credentials or making payments, independent confirmation of the publisher, commercial terms and payment protections should

still be completed.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	73/100
Identity verification confidence	74%

- Trusted social count=1

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of oxfordmail.co.uk.

- The request stayed on oxfordmail.co.uk. It was not redirected to another domain. CLEAR
- Registration is published under Newsquest Media Group Limited t/a Newsquest Digital Media. CLEAR
- DNS for this domain is served by com., across 4 name servers. NOTED
- The registration is paid up to 2028-05-23. CLEAR
- The earliest public archive of this site is from 1999-01-25. CLEAR
- It is hosted on MICROSOFT-CORP-MSN-AS-BLOCK, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about oxfordmail.co.uk at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
